(Followups directed to poster by default. If followup to newsgroups is desired, edit your headers on followup to drop rec.radio.amateur.moderated from the Newsgroups line, else your article will be rejected.)

The rec.radio.amateur.moderated newsgroup enters its 3rd year of operation this month. Since its creation in February of 2007, we have approved nearly 3,000 articles about amateur radio and closely related subjects. We would like to thank our readers and posters for their quality contributions to our newsgroup.

When we first started out, consistent with our newsgroup's Charter and Posting Guidelines:

http://www.panix.com/~rram/usenet/rram/

we allowed discussion threads to be posted to our newsgroup only. Our moderation software is programmed to automatically reject any crossposts. The one exception has been periodic information postings that are crossposted to rec.radio.info, rec.answers, and/or news.answers.

Some moderated newsgroups, such as those in the comp.lang.perl.* and misc.kids.* hierarchies, started accepting crosspostings to appropriate unmoderated newsgroups after a suitable waiting period from their initial creation. Now that our newsgroup is well-established and carried at most major sites, we would like to implement this customary followup and allow some crossposting. We would propose to allow simultaneous crossposting (i.e., one article, with all newsgroups specified at once on the Newsgroups line in the headers) to rec.radio.amateur.moderated and one other unmoderated newsgroup in the rec.radio.amateur.*, alt.radio.amateur.*, and alt.ham-radio.* hierarchies only.

Pros:

- Allows the moderated and unmoderated newsgroups to share discussion threads of common interest, without propagating more than one set of articles to news, or showing them more than once in a newsreader. Presently, threads of common interest have to run in parallel, with different sets of followups, and requiring readers to have to follow two threads, possibly with duplicate articles, in different newsgroups. We have seen multiple examples of this happening in the amateur-radio-related newsgroups over the past 2 years.

- Provides the default action of submitting articles and followups to moderator review, as news servers will forward to us for approval any article that contains rec.radio.amateur.moderated on the Newsgroups line. This allows the moderated newsgroup crossposting to serve as a "guardian" or "sentinel" to discourage threads from getting hijacked into running off-topic or into personal abuse. This may also encourage posters to use the underutilized rec.radio.amateur.misc or .policy newsgroups as crossposting targets for articles that might otherwise be posted only to .moderated.

- Readers of the unmoderated newsgroups will enjoy high-quality, on-topic, discussion threads that would otherwise require subscribing to and reading a moderated newsgroup. Readers of the moderated newsgroup will enjoy high-quality, on-topic, discussion threads that would otherwise require subscribing to and reading other unmoderated newsgroups. Those unmoderated newsgroups may contain articles of widely varying degrees of quality and topic relevance.

- Participation in this crossposting scheme is completely voluntary. Posters of initial articles in threads will make the voluntary choice to add rec.radio.amateur.moderated and one other unmoderated newsgroup to the Newsgroups line when posting. Those following up to these crossposted threads will make a voluntary choice whether to keep rec.radio.amateur.moderated or any other newsgroup on the Newsgroups line, or remove them. Followups may be directed by default to any subset of the newsgroups on the Newsgroups line (or via E-mail to "poster") by specifying them on an appropriate Followup-To line. In short, you control what you post, where you post it, and what default destinations you want for any followups. This proposed crossposting scheme does not change any of these long-standing features of Usenet and newsreader software.

Cons:

- This will subject all such simultaneously crossposted articles to moderator review by us. If they do not meet the Charter and Posting Guidelines of rec.radio.amateur.moderated, they will be rejected. We will attempt to work with submitters to let them know what is happening, and how their articles can be fixed for eventual approval. However, rejected articles that were submitted anonymously without a traceable/derivable E-mail address or identity will have to be dropped silently without feedback to the unreachable submitter.

- Moderator review will introduce some posting delay. However, it has been our experience over the last 2 years that with our large moderation team distributed across many time zones, and the automation provided by our moderation software, we can turn submissions around relatively quickly, often within an hour.

- Many newsreaders do not give clear feedback to the user what newsgroups in which a given article appears, nor to what newsgroups a followup to that article will be sent by default. We expect to initially have to handle a few confused, possibly angry, submitters who will insist that they did not intend to post to a moderated newsgroup. We are willing to provide the necessary polite feedback and user education to them to allow this crossposting scheme to work effectively. This will help ensure that the scheme is only used by those who are reasonably aware of the various pros and cons. We hope that this problem will diminish with time and greater user awareness.

- Not all newsgroups, especially those in the alt.* hierarchy, are carried at all sites. Users may find themselves following up by default to newsgroups that do not exist on their local news server, possibly resulting in article rejection from their server. Those users would have to edit their Newsgroups line for successful resubmission. We will work with users to get appropriate newsgroups added to their local servers, as well as with Panix to get those newsgroups added to Panix's server. However, as with default followups described in the previous paragraph, we expect to have to go through an initial period of user and news service provider education and polite feedback. We hope that this problem also will diminish with time and greater user awareness.

We propose to enforce this scheme in our moderation software as follows:

- Submissions simultaneously crossposted to more than 2 newsgroups will be automatically rejected with a rejection form letter (same as what happens now to submissions that are posted to more than 1 newsgroup).

- Submissions that contain newsgroups on the Newsgroups line other than approved newsgroups in the rec.radio.amateur.*, alt.radio.amateur.*, or alt.ham-radio.* hierarchies will be automatically rejected with a rejection form letter.

  Approved rec.radio.amateur.* newsgroups are those that are currently listed in the latest version of the "List of Big Eight Newsgroups" which is crossposted monthly to news.announce.newgroups, news.groups, and news.lists.misc.

  Approved alt.radio.amateur.* and alt.ham-radio.* newsgroups are those that have been created consistent with the suggestions in "So You Want to Create an Alt Newsgroup" at:

  http://www.faqs.org/faqs/alt-creation-guide/

  We will make every reasonable effort to keep our list of approved newsgroups up-to-date. In case we have overlooked any, and a submission is rejected in error as a result, the rejected submitter can E-mail us at our administrative contact address (in the signature at the bottom of this article, and the default Reply-To for the rejection message) requesting that it be added, and that the article be approved. We may still choose to reject articles crossposted to any alt.* newsgroup with an inappropriate name, including obscene language, embedded name-calling, or encouragement of unlawful conduct.

To help publicize this new editorial policy, we will update our Posting Guidelines, which are posted to the moderated newsgroup on the 15th of each month. Changes to our Posting Guidelines are indicated by an updated date in the Revision: auxiliary header at the top of the body, as well as "change bars" ('|') after each modified line of text. We will also add a short announcement, posted on the 1st of each month and cross-posted to the unmoderated newsgroups, restating this new editorial policy, and encouraging crossposted submissions.

Since this is a change to our newsgroup's editorial policies, and with some impact to the readers and posters of the unmoderated newsgroups, we would like to solicit 30 days of direct feedback and/or public discussion regarding this proposed change. For example, we would be interested to know if allowing crossposting to one other unmoderated newsgroup is enough, or if two would be preferable. We feel that more than two additional crossposted newsgroups greatly increases the probability of misconduct or accidental misposting that may result in article rejection by us. Also, should this scheme be opened up to uk.radio.amateur and aus.radio.amateur.* as well? You may send us E-mail directly to our administrative contact address below, which is the default Followup-To/Reply-To for this article. You may also discuss this publicly on the unmoderated newsgroups. In fact, we cannot stop you from doing so. We will make every reasonable effort to incorporate any feedback and suggestions. If we decide to implement this proposal, we will make a public announcement shortly after the end of the 30-day discussion period.

(Followups directed to poster by default. If followup to newsgroups is desired, edit your headers on followup to drop rec.radio.amateur.moderated from the Newsgroups line, else your article will be rejected.)

I've made a digital modem and am trying to figure out how much I need
to reduce the modem's audio output before piping the signal into an IC-
V8. I want to make sure the voltage is high enough to RX well, but
not so high that the signal is clipped of the IC-V8 is damaged.
Anyone know what the typical peak-to-peak voltage is for a standard
mic input?

Thanks in advance for any advice!
Dave

========================
Assuming that the modem has an adjustable output , I would suggest you
hook it up to the radio and ,starting at zero input ,see at what mike
input level you get an output by listening to a receiver.
If the radio has its own mike being an electret type (possibly with an
additional built-in pre-amplifier) the mike input signal will highly
likely be in the 50 - 300 mV range .

I have a Maxon TM-4800 800 trunking and can not find anything anywhere
on it. I know that somewhere someone has the cable and the software I
need to program this radio. Do you?

Hello,
I'am looking for the service manual of a Wiltron 610D sweepgenerator
mainframe,
with a 61084D ( 1-1500mhz)  plugin unit ?
Perhaps has somebody a link or a copy of it ?

Best regards,

Arjo Strijbosch

Dave, I'm 82 years old, have been a homebrewer for over 65 of them, and possibly have melted more solder than you weigh. I have had employees and myself using Weller products for at least 50 years and could really get along without your sage advise. Now if you have a spare TC201 around, name your price.

I work in a laboratory.  We have Wellers and Xytronics (which use Hakko
heating elements and are quite similar).  Nobody uses the Wellers if
they can help it. The Xytronics are much lighter and easier to maneuver.

I have some of each. One Xytronic over 15 years old. But, after
using a Weller thin pencil all others are like holding baseball bats. I like this
80 watt Weller
pen.....

Have a look on ebay, they tend to go cheaply second user and not a bad price new.

http://cgi.ebay.com/WELLER-TC201T-SOLDERING-IRON-BRAND-NEW-TC201_W0QQitemZ290288068469QQcmdZViewItemQQptZLH_DefaultDomain_0?hash=item290288068469&_trksid=p3286.c0.m14&_trkparms=72%3A1205|66%3A4|65%3A12|39%3A1|240%3A1318|301%3A1|293%3A1|294%3A200

I've had a few complete stations from ebay for less than 20 GBP over the last couple of years, far nicer to use than the cheap Chinese units we were using.

Don't you hate it when they house code a $1 IC...

Clive

That looks cool.  The ones we have at work are klunky.

I'm with you Harold. I have both and prefer the Weller's much more flexible
cord to the pen.

Sigh! GM Dale. Good to hear from you as always. All I was trying to do was
find an operational TC201 to go with my TC202. (Now I have. Thanks to W9GB,
Weller at Apex, NC will repair my old one. Try to get the Chinese folks to
supply that kind of service.) Now I have also seen how these threads develop
a life of their own. It all seems to start with an indefagitable desire to
express an opinion instead of help. I do believe I wouldn't  trade a TC201
for 10K opinions. Make that 100K. Pick any number!

Regards

Well, I'll give you that you don't surrender easily Dave. Another opinion?
Weller isn't overpriced for me. Does Hakko have a repair facility in your
home state? Weller does for me.

Surrender?  I'm not in any battle.  I am explaining my thinking and
offering personal opinions.  I am not at war.

  They have an office in my home town.  And a very snazzy web site.  73

I have been using the Apex site for repair for some time- as often as not,
they send me a new iron for free the next day. Great service. I bought the
Hakko on the recommendation from a friend. I won't buy another- it doesn't
even have an LED to tell you if it's on or not- had to add that myself.

Every place I've worked in the past 30+ years has had some form of Weller
soldering equipment.  I've seen only one that we "had to bury".  OTOH, I've
seen many other highly-touted brands that were less than impressive.  I'll
keep Apex in mind though, with Weller's track record, I doubt I'll need
their service.
I recently bought a WES51 pencil that I like a lot and my current employer
just bought a D650 gun that has power to spare for those big jobs.  The
first Weller product I used?  Dad's 8100 Junior that finally gave up after
"only" 40 years!

Another data point ... I got my Weller D8100 for Christmas when I was 16.
I used it for 20 years in the US Navy.   I still use it at home. I'm now
70. The 8100 is what I grab to solder on UHF connectors and in tube
circuits. On the bench is an old used Weller WTCP Station bought at a
Swap Meet. Not that I wouldn't like a newer Temp Contolled Station, but I
still get along hobby-wise with what I have.

Mark, KB9RQZ you are funny, trying to fool folks into thinking that
you are me by using "dloyd" but still posting under your Hughes
```

account and using your sig line....LOL

You are one kooky kook.

Have fun...while I sit back and laugh.

DL

Nice radio if you want 2m/220/amd 440.   Great radio!!   If you want only 2m and 440   and a great radio at a great price .... I reccomend the yaesu FT60.   FOr under $200 you get full 5 watts of power and 2m/440 coverage. It is also moddable for out of band xmit and receive.

Maybe Mark Morgan will sell you his 847. He doesn't know how to use it. He once commented that he had problems receiving 80 meters....said he had a two meter antenna hooked to it.
Duh!

Thanks, Strooker. I appreciate your comments. Yes. I'm looking at the Yaesu
FT-60, too. Being on tight money, my final decision will be my only
decision, so I have to be as analytical as possible in my choice.

Weller makes junk better than your junk by maybe 40-50 dB.
Thanks for your unsolicited opinion.

All 756 have display problem?? or only some batch (certain serial # range)
have problem??

I am hesitating to purchase used 756.
Please help me if there are something I should know before purchasing used one.
Thanks in advance,
Brian

Brian-

Apparently it was only the first version that had the problem. If you want to learn more, Google for 756 display.

When I dare to use an
A) electric blanket, or a electric frying pan set on "low",
at the same time when there is a
B) UPS computer power supply, or Ham radio power supply
also turned on anywhere in the house, the power supplies hum most
worryingly. One must make a choice: A) food, warmth, or B) fun.

What is the name of this waveform resonance with the current limiters
of A phenomena? Is there some kind of filter I can apply?

Check for a loose wire somewhere in the circuits that are affected. Check
the voltages at the affected devices to see if they change when the frying
pan is cut on and off.

Thanks but a ham told me (in Chinese) that this is a well known
phenomenon with cheap current limiters, that take a bite out of each
crest of the AC sine wave as their method of limiting. That's why such
appliances cause power supplies in the same house to hum when such
appliances are switched to LOW or MEDIUM, but not HIGH. If only I
could find the English name of this phenomenon, I could look up what
to do about it.

You've got a cheezy SCR-based control in the electric blanket. When it turns on, you get a fast current spike. IR products in your power wiring turn this into a voltage spike (drop), and since it's a reasonably fast, sharp edge, it's rich in harmonics.

Now let's look at your power transformers, such as the one in your ham radio supply, or in the UPS. When they're getting nice clean sine waves, they hum along merrily (they hum because they don't know the words).

But when that spike from the SCR wanders in, the windings in the transformer try to reproduce it, humming now at harmonics of the power line, and humming a different and more irritating tune.

When the electric blanket is on high, the SCR is essentially turned on through the entire cycle (or half-cycle depending on topology). Turning on at close to zero voltage minimizes the switching spike.

Fixes:

Brute force filter at the electric blanket, and/or a snubber on the SCR.

Get an electric blanket that uses a (zero-crossing) triac control.

Heavier, shorter power wiring to the electric blanket, the UPS and ham radio gear, or both.

Ditch the electric blanket and get a live-in friend!

Before we rebuilt our house, when the fuser heater in the laser printer in the office kicked on (another cheap SCR switch), the fluorescent lights in the room would flicker. After rebuilding, and replacing all the wiring, going from AWG 14 to AWG 10 and 12, that laser printer didn't make the lights flicker any more. Replacing it with a more efficient laser printer helped a lot, too.

That sounds to me as if you're running into a "harmonic currents" issue. This occurs if you have something connected to the mains which draws current in a nonlinear fashion (i.e. current drawn is not linearly related to the instantaneous value of the voltage sinusoid).

In my experience, the commonest cause for this is a device which uses a triac "chopper" to control the amount of current being used. Such devices "switch on" partway through each powerline cycle (120 times a second), so the current jumps from zero to a fairly high value. The sudden jump creates a load on the line with frequency components at harmonics of the 60 Hz powerline frequency... hence the name.

The devices you indicate (electric blankets, frying pans), and light dimmers are notorious culprits.

Some of these devices may draw current in an asymmetrical fashion... e.g. they might use a half-wave rectifier diode, and thus draw current on only the positive half of the AC cycle and not on the negative (or vice versa). "Light bulb saver" discs (little disc-shaped diodes that go into a light socket before the bulb) do this. In effect, the asymmetrical load creates a DC offset on the voltage "seen" by other devices on the same circuit.

All of these "bad loads" can cause transformers in other devices to start humming or buzzing. Toroidal power transformers are particularly subject to buzzing if there's an asymmetrical load / DC offset on the line.

I don't know of any good way of filtering out this sort of problem... an isolation transformer can help somewhat, sometimes, but it's an expensive solution and I don't think it's very effective.

If you've got really severe humming/buzzing with something as simple and low-wattage as an electric blanket, , I'd be a bit concerned that this might indicate that there's a problem in your house wiring... overloaded circuits, a bad or loose connection somewhere, or even a loose or open neutral. The latter is a dangerous situation. If you should notice lights getting brighter, or appliance motors speed up, when you turn *on* a light or appliance elsewhere in the house... then you may have an open neutral and should call the power company immediately. I've had this happen twice (squirrel chewed through the neutral wire in our building's drop from the pole transformer), and PG&E always reacted immediately... their dispatcher said that they consider a "low voltage / high voltage" situation to require immediate action.

You might want to have an electrician check out your house wiring.

You can think about so-called power filtering or power conditioning transformers or voltage stabilizing transformers. They are not cheap and can get heavy, too, but come in at least three versions: i) low end, ii) mid range, and iii) fancy-schmanzy high end, all with various kinds of specifications on max output harmonic content, voltage regulation plus/minus, etc. Some use transformer-capacitor-inductor networks, some use an unusual core geometry to exploit a curiosity in electrodynamics of transformers to get the effect. But they are all designed to take out spikes, harmonics, and weirdo waveform problems. Some of these are offered by high-end computer backup-PS companies since some computer installations experience funny glitchy-buggy problems from their power lines.

Can't help you with search terms and I know the proper term will give you magic results (lots of hits on what you want). Good luck, but our modern world is hooking up all kinds of weirdo electronic crap to the power grid.

For ham radio, you might want to think about a 12 volt deep cycle marine battery and charger to give you clean power.

KC8QJP <KC8QJP@yahoo.com> wrote:

>cut the ground off the blanket that will make the hum go away

That strikes me as very poor advice, for three reasons:

[1] I've never seen an electric blanket or bed-heating pad here in the U.S. which *has* a ground prong. They all use two-wire (hot/neutral) plugs.

[2] If there *is* a ground prong on a device which is used in close proximity to a human body, it's probably there for a very good reason (safety). Removing a safety ground from such a device seems like a really bad idea.

[3] If the reason for the humming is a harmonic-currents problem (as I

> suspect) then it has *nothing* to do with the presence or absence
> of a ground connection. It's due to irregular current flows on
> the hot and neutral wires. Floating the device free from the
> safety ground will have not reduce the problem at all.

"Floating" an equipment-chassis ground can sometimes help reduce hum in audio/video equipment if the hum is due to a ground loop. I don't believe that ground loops have anything at all to do with the original poster's buzzing-transformer problem.

```

DP> [1] I've never seen an electric blanket or bed-heating pad here in
DP> the U.S. which *has* a ground prong.
No ground prong on my blanket or frying pan.
Thick house wiring all done by myself, so that can't be the problem
(don't tell Mom about the day I made a loop and all the conduits in
the walls shook.)
Therefore I shall, as a nod to the less privileged who perhaps don't
even have electric power, learn not to eat or sleep while using the
computer or my radio equipment (BM4IFV, not on air anymore, now just
on email). OK, thanks. Bye.

Hello and thanks for the read.. I have 2 R-2001 service monitors that have low Generator Mode output.

The specs are that the output should be low of minus 127 dBm to a high of plus 13 dBm using the step switch and variable.

Both of these units output a low of minus 147 dBm to a high of minus 17 dBm using the step switch and variable.

While in the Generate Mode, the next line below the actual Volt/dBm reading line reads:

DIST/SINAD INPUT Too low

On the older R-2001B monitor in Generate Mode, that line is SINAD DB with a bar (graph?) below it.

Any & all thoughts are appreciated. Is it pilot error on my part? Settingd on thr Front Panel? Internal setting problem?? Or ????

Thanks for your help.   Larry

Larry; It has been a while since I have used one of these models.

1) There is a fuse under the BNC connector for the GEN out which
sometimes gets blown. Unscrew the BNC and you will find it, it looks
like a resistor nut is a very small value fuse. When it blows, your RF

output from the GEN out is greatly reduced.

2) You can push or pull the RF out vernier to select different functions (I forget which) Perhaps high RF level or GEN out mode (BNC connector) vs Duplex (N connector). I don't think you get full generator output from the duplex (N Connector) port because it runs through a high power attenuator pad. But it should be calibrated properly on the low end of the range.

3) How are you measuring the RF levels? Describe how you are set up.

4) The SINAD meter won't read anything unless you generate an FM carrier modulated with a 1000 Hz tone at +/- 3.0 KHz deviation (60% modulation) into an suitable 25 khz bandwidth FM receiver and connect its audio output to the scope/SINAD input. It is an audio distortion analyzer with a SINAD calibration mode. You can spoof it by looping a tone out from the audio generator to the SINAD input, but the SINAD will be so good, the bar won't move much from the left unless you switch to AC DVM mode.

Hi,

I have a Kenwood TS-850s and need to remove the knobs for a little maintenance. They are on very tight and I'm afraid I'm going to damage the pots/panel/knobs by removing them. Any removal techniques that will minimize any damage would be appreciated.

I am having an issue with programming my radio repeater shifts. I am trying ot program my local fire frequencies for the fire dept but having issues.

the Rx freq is 151.190 and the Tx freq is 159.225 which means I have a +8.035 shift.

Now when I go to do a custom shift in my settings I cannot shift at this increment, meaning I can only set my shift to be 8.05, 8.10 and 8.00. . . Is there a way that I am missing to get my shift ot be 8.035

so I can hit the repeater correctly.

Lube the pots and shafts with light mineral oil and let it soak. Contact cleaners with mineral oil are safer. Some Kenwood knobs have set screws. Look under the rubber band on the main tuning knob, etc. A fork with one of the tines missing might help to pry the others. Use cardboard on the face to protect it.   You just have to be careful not to mar things. Another way on some models is to loosen the front panel and rock it. Sometimes the metal inserts rust.

Changes followed by "|".

The rec.radio.info newsgroup, first established in 1993, has been recently revived by an active moderation team. We are currently seeking suitable information, FAQ, and bulletin articles from the entire rec.radio.* newsgroup hierarchy for simultaneous cross-posting to our newsgroup.

We are seeking a replacement maintainer for the following information

bulletin formerly posted to rec.radio.amateur.* (and currently archived at http://www.faqs.org/faqs/radio/personal-intro/):

radio/personal-intro
Subject: Guide to the rec.radio Newsgroups
Maintainer: jeffreyh@Hawaii.Edu (Jeffrey Herman)
Last Posted: 9 Nov 2001 06:18:17 GMT
Posting-Frequency: 15th of each month

We are willing to provide any technical support necessary to get this article updated and automatically posted again at a regular interval. This would include establishing contact with the original maintainer for any necessary permissions. We would prefer to seek a new, dedicated maintainer at this time, rather than start auto-posting the original article ourselves.

For more information about our newsgroup, see:

http://www.panix.com/~rram/usenet/rri/index.html

Please direct any comments, questions, or criticisms to rec-radio-info-request@panix.com.

Summary: Recruitment announcement for radio-swap-related FAQ articles

Keywords: FAQ, Intro, amateur, ham, shortwave, scanner, monitoring,radio, swap, buy, sell, trade, recruit, recruitment
Xref: g2news2.google.com rec.radio.amateur.equipment:1217 rec.radio.swap:1490 rec.radio.info:513

Posted-By: auto-faq 3.3.2 beta (PGPMoose V2.0, Perl 5.005)
Archive-name: radio/swap/recruitment
Revision: 1.1 2007/09/29 18:42:57
Posting-Frequency: posted monthly
URL: http://www.faqs.org/faqs/radio/swap-guide

Changes followed by "|".

The rec.radio.info newsgroup, first established in 1993, has been recently revived by an active moderation team. We are currently seeking suitable information, FAQ, and bulletin articles from the entire rec.radio.* newsgroup hierarchy for simultaneous cross-posting to our newsgroup.

We are seeking a replacement maintainer for the following information bulletin formerly posted to rec.radio.swap (and currently archived at http://www.faqs.org/faqs/radio/swap-guide/):

radio/swap-guide
Subject: Rec.radio.swap FAQ: A Guide to Buying and Selling on Usenet
Maintainer: jeffreyh@Hawaii.Edu (Jeffrey Herman)
Last Posted: 6 Nov 2001 19:25:51 GMT
Posting-Frequency: Monthly

We are willing to provide any technical support necessary to get this article updated and automatically posted again at a regular interval. This would include establishing contact with the original maintainer for any necessary permissions. We would prefer to seek a new, dedicated maintainer at this time, rather than start auto-posting the original article ourselves.

For more information about our newsgroup, see:

http://www.panix.com/~rram/usenet/rri/index.html

Please direct any comments, questions, or criticisms to rec-radio-info-request@panix.com.

If the knobs do not have a set screw, you might like to try this
method. I have used it many times over
the last five decades. Take a heavy thick cloth and slide it around
the knob, then twist the cloth to form
a clamp, pull with a rocking right to left or up and down motion.
Warning, you might need to get some help
holding the rig if very tight. This method has worked for me many
times. K4ZYF

For sale:

Hard to find CFG-515 Antenna Coupler plug-in board for NSD-515 JRC
transmitter. The board is in very good cosmetic and very good working
condition.This board is an optional board for NSD-515 transmitter.

I use my NSD-515 transmitter with external amplifier, so I really
don't have much use for internal tuner board.

$150 plus shipping from SF Bay Area.

Check Universal Radio website for reference:
http://www.universal-radio.com/CATAL...hf/nsd515.html

I am also looking for non working NRD-515 receiver.

Fortumille lunta tupaan. Valtio ostattaa sen ulos Fingridist�. Ja tutusti asia taas niin vaikeaa, ettei l�ytynyt edes tekstitv:n puolelta. Siltaappaa!

Vasta viikko sitten OL-3 projekti meni plutoniumpaskojen laittomista poltoista USA:han 3v tutkintaan.

Fennovoimalle kenomonoa Kristiinan kuntafiksuilta, jotta sinkelit lent��!.
..

Ydinkriittisempi Urpiainen syrj�ytti ydinkiimaissemmat Nartrit.. ..

Pohjolan ydinvoimalat 80% ajossa ja tiedossa ilmeinen megaleka laittomasta 60 polttolimiitin ylityksest� 75!

Uraanipositiivikaivuu loppu 2007 ja plutoniumjalostus kaatui 11% saantifloppiin laserilla. Cernin kenkkuilut jatkuu. ..)

Ja hemmetti kun lipsahti viel� julkisuuteen my�s noi TVO:n kohtalokkaanhuonot tritiumvuototiedot.

M�ntyankeroinen vie puun my�t� rakentamiskiimat maastamme. Ei auta vaikka ydinklingonit vaikeena vaikee faktoista!

Beettasoihtuava ydinaavikoituminen levii hurjiin mitoihin. Ja kohta ydinsyyllisyytt� ei peit� mehil�istuhoissa, kampamaneeteissa, tai edes sammako/matelijoitten tritiumlammikkokuoloista jne. en�� MIK��N!

Kyll� on M�LS�� ydinalalla nyky��n!

.. . ..Jaa hemmetin hauskaa ydinvastustajilla! Niin hubaa, ett� piti ihan
"TVO/Pohjolan seinille kiipeill�!"!)

Steve, the various models are not all the same.  The HQ-129X set is
unique and relatively expensive.  The later models aren't.  What
particular model(s) are you looking for?

Looking for just the TC201 soldering iron that goes with their TC202 station. Actually, if I could just find out what the two IC's are that are house numbered, I could likely repair the one I have.

This is an unmodified like new Tigertronics SignaLink Model SL-1+ Sound Card - Radio Interface. The SL-1+ is described in detail at <http://www.tigertronics.com/>. Just click on SignaLink SL-1+. This is not the USB version.

The internal jumpers are set for use with a Kenwood but can easily be reset for other rigs. You will receive the SL-1+,the

manual from Tigertronics and two interface cables. The SL-1+
radio cable has an 8-Pin Mic plug that was never used. The
other is a never used 5 foot cable with male 3.5 mm stereo
connectors.

Worked perfect when last used but sold as is. Will not ship
outside of the US. Shipping is $8.00 for Priority Mail

Bidding starts at $45 and End Dec-03-08�17:08:36 PST

I have a BC-458 transmitter I would like to sell.
It also goes by ARC-5 transmitter,Command Set Transmitter and SCR-274-
N
This was used in WW-II aircraft
This set is untested so is being sold As-Is
It is all there(tubes,etc...)and is in great shape but does have
normal wear for its age.

If you would like more pictures email me and I will send some

I'm asking $80 for it but will take reasonable offers
Plus Shipping

Thank You

Hey OM

well I tell you what let's say a certain company is running
```

racketeering like some big electronics firm.
This racket involves taking peoples money and laundering it then giving it back after it's been laundered. Now lets say you partnered with this company then you too would be guilty of racketeering which under RICO laws is a felony.

So in the end your so called definition of partner would fall under the guise of RICO and you will go to jail for a real long time and your best friend in jail will be bubba.

In other words your guilty by association.

73 OM

n8zu

```

So does anyone know if Kenwood has any new HF ham radios on the horizon? I've looked hard at the TS-2000 and TS-480, but I could not brign myself to buy them. The A/B comparisons with the TS-2000 to other HF standards is too dismal, and the TS-480 is too ugly. I hope the next radio is more sensitive, more selective, less noisy, and alot better looking that the TS-2000.

HI from Ken, G4KIR,

It appears (from rumours) that "Kenwood" have now ceased producing new HF Transceivers.
They still seem to be interested in the VHF, UHF side of our hobby though.

It's a shame we may not see anymore HF equipment from this once very popular company.

Hope this helps, cheers, Ken, G4KIR.

Since we are repeating rumors I have heard from several sources, all of whom may have heard it from the same place, so all I suggest you assume is that it is a popular rumor, not necessarily a truthful one, is that they are being bought by a large consumer electronics company.

If that is truely the case, their new masters may have a different idea.

As an example, the camera maket dried up a few years ago in the shift from film to digital. Konica merged with Minolta and then went bust, Sony bought the remains and now makes good digital cameras using their technology.

Nikon was bought out by a different large consumer electronics company, and they have prospered.

I would not count them out.

Meanwhile try Ten-Tec :-)

Geoff.

Hello,

I have a qeustion about the PS35 , the internal PS for the IC970H.
Can this supply auto-detect 110 and 220 volts so no switch is needed to set
from 110 tot 220 volts ?

Met vriendelijke groet,
Best regards,

Hans Pluijgers

Thats happened, when you raid a cathouse you get the piano player too.
Perhaps one could prove their disassociation enough to stay out of
jail but your lawyer may be putting a new addition on his house and
dedicating it to you.

Hello zu,

You're right about the guilt by association, just look at what happened to
OJ Simpsons' friend today. 15 years is along way to go for a ride along.

73
Steve.

Don't hold your breath. I had a TS-570D and when it went out of production I purchased a TS-2000. Hated the rig and sold it and purchased a TS-570S. I guess it is sort of like remarrying the same woman. I am a happy camper with the TS-570S.

The rec.radio.info newsgroup, first established in 1993, has been recently revived by an active moderation team. We are currently seeking suitable information, FAQ, and bulletin articles from the entire rec.radio.* newsgroup hierarchy for simultaneous cross-posting to our

newsgroup.

We are seeking a replacement maintainer for the following information bulletin formerly posted to rec.radio.amateur.* (and currently archived at http://www.faqs.org/faqs/radio/personal-intro/):

radio/personal-intro
Subject: Guide to the rec.radio Newsgroups
Maintainer: jeffreyh@Hawaii.Edu (Jeffrey Herman)
Last Posted: 9 Nov 2001 06:18:17 GMT
Posting-Frequency: 15th of each month

We are willing to provide any technical support necessary to get this article updated and automatically posted again at a regular interval. This would include establishing contact with the original maintainer for any necessary permissions. We would prefer to seek a new, dedicated maintainer at this time, rather than start auto-posting the original article ourselves.

For more information about our newsgroup, see:

http://www.panix.com/~rram/usenet/rri/index.html

Please direct any comments, questions, or criticisms to rec-radio-info-request@panix.com.

I had this idea a while back, to thin out my stuff in what I think is a useful and interesting way. Along the way I ended up having to buy a bunch of new stuff as well (e.g. the brand new tune and load variable caps). So take a look - might be a fun way to spend some winter evenings.

Hey OM

I should has learned to play the guitar. Instead I got into
electronics built my first xmitter in '67 using a 6BQ5 xtal osc and
6146A final.
Everything was hot. I used series twist lock caps in the ps, B&W coil,
with aligator clip adjust, multi elmac plate and tune caps, a tv set
power xformer, all that on a punched out 5x7x2 LMB chassis. Even the
Key was hot as I keyed the screen of the 6146A.

73 OM

I have a intresting question about the Aircraft, 800 Mhz Mod for the
Alinco DJ560. Every mod i have found for this radio is wrong. They are
pertaining to the 580, for the 800/aircraft mod. The only jumper is the
orange wire on the IF board whitch opens out of band TX. There are no
red or blue wires to cut at the bottem of the radio, behind the batt
clip. There are two wires buried back on the RF board near the VFO's,
but im not shure they are to be cut, one being red. the only blue wire
is in a harness going from the processor board to the Ptt/Func button

board and i know that one isnt it. In guessing it is a SMD on the board
that has to be removed.

I know this is probibly not of much concern to many, being this radio
is somewhat obsolete and not too popular. But i would a appreciate help
with this intresting problem.
Much thanks.

That's pretty impressive, fitting that on a 5x7 chassis!

Mike

<<be a shame if Kenwood dosn't make any more nice new hf rigs,
some of the features of for ex, the ts-2000x make it really
unique.

it think it's ironic and a bit self contradictory, that while i
enjoy many of the new rigs, some look really great, some sure don't
some do in fact have some nice new features, as was stated here and
as noted here some really will dissapoint

many perhaps more than ever seem to really seek out some of the
older but good rigs

To me my Yeasu FT-102 is great and tough to beat not saying
it's perfect , I played with a friends old collins and was
really impressed at the design aka it looked nice as well as
it's performance,

it's interesting to note that some of these older rigs that are
still considered 'favoriates' were made pre computers yet
somehow guys/companies were still able to produce greatness

some of these older rigs had their own personalities, a cult
following it's definately more than sentimental

maybe some company will produce a really super rig that will become 'the rig' and will stand the test of time, maybe it will even be less than 10grand

cheers

I bought a new IC-756 Pro III a few months ago. I'm not impressed. Wish I hadn't spent the money. I miss being able to go to HRO in DE and try out the rigs first hand. Shouldn't spent that much money without doing that. A drive to Atlanta would have taken care of that. That'll learn me.

It isn't that the 756 isn't a nice rig. It is. It's just that it isn't worth $2,300 more than my Yaesu FT-890AT. Ditto the FT-847 I bought a while back. I'm not impressed with it either. Should sell both of them and put the money back where it belongs.

I also have an IC-706MKIIG that I dearly love, so my distaste for the later rigs isn't based solely on not like software driven radios. The 706 was easy to memorize. The latter two rigs require that I keep the manual handy. Of course, it could be me and my declining short term memory that is the problem. Still, if the function is controlled by a switch or a knob on the front panel, like the FT-890, I don't seem to have a problem needing a manual.

Also, the older rigs were easier to work on. No SMT to deal with. Maybe I'll sell off the new 756 and the several year old 847 and look around for an FT-990.

Ed, N2ECW

I thought Kenwood already was a large consumer electronics company :-)

But a note on their Web site dated last May said they expected their
"merger" with JVC to be completed by October 2008.

My neighbor gave me one of those 5 tube AM BCB radio kits back when I was a kid. It was part of an electronics correspondence course he was taking. The idea was to put it together breadboard fashion on the schematic then when you got it working move it to the chassis. I thought it was cool just keeping it on the breadboard and hauled it around for years until it finally got stolen out of storage about 20 years ago. Over the years I had tested several mods on it. HF converters, adding another IF stage, a BFO, Q multiplier and reworked the series filament string for parallel operation. I'm sure if it was still around I would still be tinkering with it.

Jimmie

I didn't build a transmitter when I got my Novice License (in my teens), though I did start collecting parts to do so. I was going to build a rig using a 6GK6 oscillator and an 807 final. But, on Washington's birthday I went down to Harrison's in NYC for their big yearly sale. They had a stack of Elmac AF67 transmitters for about $15 each, so I got one. I had to build a power supply for it though. This I did using a junk salvaged from old TV sets found curbside on garbage pick up days.

I used to ride around the neighborhood on my bicycle looking for thrown out TV sets. I carried enough tools with me to pull a chassis out of a cabinet and lug it home. Then I'd tear it apart in the basement and keep the goodies.

Seems all of those AF67's had the same problem, burned out modulation transformers. But they worked great on CW with crystal control. Some of them also had bad VFO's.

Years later when my brother got his novice license we found him a used Lafayette HA350 receiver and I built him a two tube transmitter. Actually I used parts from my now defunct AF67 stuffed into a large minibox as a chassis. It used the 6GK6 (from the junk box) and a 6146 in the final (from the AF67). I wonder if he still has that transmitter lost in his basement? I might want it (and the HA350) back.

You've heard of "house flipping" in the real estate market? ;-)

This looks like amplifier flipping. Some of these guys read the obituary columns and the silent key lists, then go offer the widow 5 cents on the dollar, if you get my drift.

Couple years ago I was looking for rigs and read the stuff on eBay, too. I always had this funny feeling that "it works" meant that if you turned on the switch, you might get some noise out of the speaker or the pilot light went on without blowing the fuse, and not much more.

Take your extra money and go to hamfests instead. Maybe someone should write up a list of things to look for when the box is right in front of you and questions to ask before you start haggling. Auctions always seem to get more blood out of a turnip than the turnip can possibly hold.

Pardon my skeptical attitude. But, I build homebrew gear now.

```

Hi,
Was wondering if anyone here has a manual for a Hy-Gain 421B Power
Meter that they could scan and email me or might know of someplace
where one could be downloaded?

Any help is Greatly Appreciated
Thank You

Hi!

I am searching for a manual of the receiver 'M3000' by Dansk Radio A/S,
built in the 80s. It was also sold by Marconi as 'Oceanic'.

Picture = http://www.seefunknetz.de/m3000.htm

Perhaps there is someone who can help and send me a scanned copy by mail
or even by snail-mail. Costs will be paied of course.

Thanks in advance!
73
Kai

I was wondering if anyone knew of a source for an A/B switch for the ACC port in the back of the FT-817. I need it because I have both an LDG Z100 auto-tuner plus a CAT cable for computer control. Both items to me are indispensible, but reaching back and manually swapping cables every time I want to switch devices is a pain in the backside.

I'm sure SOMEONE out there knows where I could get such a device. Right now I can't even find the switch, cables and connectors to BUILD one myself, plus the fact that my eyesight is bad enough that working on something that small is a bit difficult to do.

Hey. Notice how everyone in that picture is wearing a tie? The guy on
the left is wearing a bow tie, I thnk? Proper dressing; these days we
are too sloppy; eh? Cheers.

Isn't there a Diode Load terminal on the back already?

BTW: That paint job looks awful. Too shiny. I had 2 of those beasts
and liked a slightly worn look a lot better.

They aren't that difficult to tweak to superior performance. I
wouldn't spend more than $500 for one with a good RF deck.

The NAVSHIPS document states that a Dymo label should be affixed by the
jack.

Related to your other comment, I think that the one on the E-place has been repainted.

My yellow striper came with the decades-old Dymo stickers still attached. I swear the glues in modern Dymo labels aren't as good.

Tim.

K9YA Field Day Results

The K9YA Telegraph is a free, monthly, general interest amateur radio publication read by ham radio operators in more than 100 countries. The K9YA Telegraph contains the stories and features most wanted by our readers, because it is written by them. An e-Zine, it is delivered monthly as a full-color PDF file.

If you're in the mood for Morse, hankering for history, gluttonous for gear, ravished for a review, needing nostalgia, or just plain famished for fun, you'll find it in the K9YA Telegraph.

To download sample issues, subscribe or write an article, visit the K9YA Telegraph Web site. http://www.k9ya.org

I am in need of a manual for a Motorola portable repeater model
#P43SXS3180B4. I would gladly pay for a copy or an original. Thanks
Tim N7XAU

But the P-touch makes suitable substitutes that look great and adhere
very well.

As it is no longer produced, does somebody know if there is a suitable
substitute to Kenwood vc-h1 on sale?
I am looking for something like it, handheld size, to use on portable
operation for SSTV.
Otherwise, is there any digital compact photocamera which can be easily
connected to a kennwood th-d7 radio? (most, if not all digital photo
cameras only connect to computers and require a software).
Thanks.
Gio

Hi to all,

I have vhf transceiver IC-V200T and I change eeprom to
super H16 but anyway before and now I have problem with output power. On
170.000 MHz they give about 30W, but on amateur band only 50mW.
I try adjust using service manual but I can only adjust power on 170.000
MHz.
Can you help to me and try explain how to adjust power on radioamateur band?

Best regards,

73 de 9A8RA

Bok Damire,

Hvala na odgovoru, ma mjerio sam sa obicnim wattmetrom ali sma stavio 50mW
jer nije pokazivao niti malo snage..HI
Neznam napamet koji je hibrid al mogu provjerit znam samo da jeuredjaj za
opseg 146-174 MHz a znam da postoji varijanta
za 86 MHz tako nesto a dali postoji jos koja verzija neznam. Programirao sam
nekoliko ovih uredjaja i svi su imali snagu
ok, ali ovaj nece ...pa ako imas kakve informacije pomagaj...

Hvala i pozdrav

DE 9A8RA

LOL.

His website claims that Mouser Electronics is a "partner." Searches on Mouser for "Telstar" and "VoiceMax" return zero results. Hmm. . does buying some parts from Mouser make them a "partner." If so, I'm a "partner" with Mouser, too.

LOL

LOL

The dictionary defines partner as "One that is united or associated
with another or others in an activity or a sphere of common interest."
So yes, in your example... you would be a partner of Mouser.

Commander... Like I said earlier... the dictionary defines partner as
"One that is united or associated
with another or others in an activity or a sphere of common interest."
I guess you're not able to comprehend that sentence. Not really
surprising. If you're looking for an argument... I only argue with
worthwhile adversaries... lol

Perhaps Mouser should be informed of this claim to partnership. They
may very interested.

Jimmie

Maybe not "informed" but ask people THERE, at Mouser, what their=20
"definition" of _partner_ is and then tell them about this guy.

"Dictionary" definitions should not be confused with word usage within=20
contexts that alter the meaning of words. For example, the word=20
```

sterilize has a different meaning in banking/finance compared to=20
microbiology.

In a business context, "partners" generally implies that an ongoing=20
relationship exists by virtue of a written contract. If party A buys parts=
=20
from party B, and pays for those parts with money, that establishes a=20
provider-customer relationship, not a partnership.

I have their 2008 sept-oct catalog and "Telstar" is not listed in the supplier index at the end.

Does Telstar provide any kind of study data that defines what "maximum range from their rig" actually means?

And documents that the processor actually does something measurably beneficial at the receive end?

The last I heard a partnership required a legal agreement between two
or more parties agreeing to be parters. It may be a case of the powers
that be at Mouser asking themselves "Can I make more money off of
Telstar by doing business with or by taking legal actioon against
Telstar".

I once had a similar complaint lodged against me when I had my own
business because my sign and letterhead read ....serving in
partnership with a well known electronics supply firm. I manage to get
away with it because they had sent me a letter after I had opened my
account with them stating how they "anticipated serving in partnership
with my business". I had based my shingle on this quote.

Jimmie

There are no federal laws in the USA governing partnerships.
It may be covered by some state law where Mouser is incorporated.
The issue is trademark infringement. Something most companies
take quite seriously.

I hear you Jimmie, the simple fact is Brian uses google to cross post/spew
his product. As far as I know they don't give a flying rats ass about
usenet abuse.

I say no one is buying it anyway so let Brian carry on from his parents
basement. No harm no foul.

the problem is certainly guy seem to have a case of OCD concernign him
and he uses them to ppormote his product a nice way of making
lemonaide of that problem

According to this gentleman's paper, you cannot substitute 6146b for
other 6146 series tubes.

www.n6wk.com/kenwood/The_6146_Family_of_Tubes-1.doc

If it were me, I would stick with GE tubes.

S�hk�   [Jukka Lukkari,  14.05.2008]

S�hk�n kulutus jatkaa laskuaan
S�hk�n kulutus j�i huhtikuussa runsaan prosentin edellisvuotta pienemm�ksi.
Vuoden nelj�n ensimm�isen kuukauden aikana s�hk�� on Suomessa kulunut 32,3
gigawattituntia eli yli kaksi prosenttia viime vuotta v�hemm�n.

*Aika hurjaa pudotusta kun ennakoitiin viikko sitten teolisuuspiireiss�mme
mit� lie +10% lis�� ja nyt tuo v�itt�� jo -6% vuosilaskua!!! Kuka siis
valehtelee maasamme ydinhallinnon lis�ksi?!

thanks for the   tip , i agree but not sure why you mentioned that
thou

was't looking to substitute

was   requesting info on the   taylor brand of   6146b tubes

TenTec Orion II model 566 in mint condition, both operationally and =
visually.  Included is the 302R black Encoder-Keypad matching the O II =
case, orig packing-box, manual, and misc items, couple of added roofing =
filters: 1.8khz and 600hz.=20

The optional 302R - Black remote encoder/keypad is included and adds =
much to operator convenience. Like new condition, works as new, =
non-smoking environment. I am the original owner.=20

The rig has always been in the home shack and run into a BiggIR antenna =
or a Titan 425 amp. This model does NOT have the antenna tuner, as it is =
the 566. (The model with the included tuner is the 566AT.) Photo jpg =
files available by request.=20

$3300 plus actual shipping/insur, pickup is fine. MO, check, PayPal OK =
with fee added. Would consider trade for a Titan III amp in comparable =
condition. Thanks for looking.  -  w9nm at sbcglobal dot net  -=20

From time to time, I see an Elecraft K-2 come up for sale. I have thought about buying one of these to try. However, they usually sell for better than $1200. I looking over the specs, I wonder if this radio, which has 10-year old technology, performs any better than a Yaesu FT-757 or similar vintage rig? Usually, vintage Yaesu, Kenwood or Icoms sell in the $300-500 price range.

Any thought and recommendations are appreciated.

Jim

We Elecraft owners/builders are something else!

Compared to some of the radios you mentioned, well, you pay extra for
the fun of building the kit. I don't have one of those to compare
with, but someone who borrowed my K-2 for a little while said it has
a "really sweet receiver".

Hello and thanks for the read. I have an ERC (Electronic Research Co.)
Oven-Crystal in an 8 pin octal base can.
Does anyone have a lead to a site where I could find which pins are for the 115VAC heater, +V and it's ground and at what voltage range to make the 1 MHz crystal oscillate and which pin for it's output.
I am trying to adapt this unit to fit inside a Motorola R-1201A signal generator that is missing the original Xtal unit.
Thanks for any help.
Larry McGee

From the standpoint of performance the K2 is excellent. Reviews are available on the ARRL website of all popular rigs.

There are many current receiver sections that are not up to the overload handling specs of the K2. The $1200 prices you may see are for a K2 will include quite a few options. Over the years I have loaded my K2 with pretty much everything available, save for the 100w amp. The $$ add up. You can find basic K2s for sale from time to time. You could start there, and add the options as you go. (If you have a desire to build it yourself.)

If you compare a kit to a mass produced rig (of comparable performance/features) you will find that the mass produced rig will be less expensive.

Set your budget $$. Decide what modes are most important to you. Read the reviews, post question here and on the appropriate forums. When you have a 'short list' try and find hams within reasonable traveling distance for a hands-on test. Then pick... take a deep breath... and purchase the rig of your choice.

I own and have built K1, K2, KX1, plus some to the test equip type kits from Elecraft... all of them are great! My first novice station was a homebrew tx and regen rx out of the ARRL hand book. My first commercial rx was a Hallicrafter's SX-45... that I spent years using and Modifying that receiver. First commercial new rig was a Galaxy V mkII, that I would lug around during my Army days, running phone patch for fellow GIs. Over the years I've settled on Icom for the shack and Elecraft for QRP and a TenTec amp for QRO.. You could find some excellent values purchasing an Icom 756 Pro I or II on the used market... uh... I mean, pre-owned. My point of view is from a 98% CW op.

Good luck in your quest,
Emil
W9NM

The rec.radio.info newsgroup, first established in 1993, has been recently revived by an active moderation team. We are currently seeking suitable information, FAQ, and bulletin articles from the entire rec.radio.* newsgroup hierarchy for simultaneous cross-posting to our newsgroup.

We are seeking a replacement maintainer for the following information bulletin formerly posted to rec.radio.amateur.* (and currently archived at http://www.faqs.org/faqs/radio/personal-intro/):

radio/personal-intro
Subject: Guide to the rec.radio Newsgroups
Maintainer: jeffreyh@Hawaii.Edu (Jeffrey Herman)
Last Posted: 9 Nov 2001 06:18:17 GMT
Posting-Frequency: 15th of each month

We are willing to provide any technical support necessary to get this article updated and automatically posted again at a regular interval. This would include establishing contact with the original maintainer for any necessary permissions. We would prefer to seek a new, dedicated maintainer at this time, rather than start auto-posting the original article ourselves.

For more information about our newsgroup, see:

I have 2 older CB BASE station radios. ONE IS SSB.. and the other is AM only

And I have a 100 + watt Knight T 175 AMP. 10 mtr and 6 mtr AMP. ALL THIS EQUIPMENT IS IN NEED OF REPAIR. THE AM unit comes on and I got sound out of it. Squelch Noise. COMES WITH NICE TURNER DESK MIC

THE SSB radio has NO power cord.. SO I could not power it. COMES with MIC.,.

THE AMP powered up.. Made some noise. SO I pulled the plug.

Pictures of all above by e-mail.

I will trade for a NON working HF transceiver.

73

Larry-

If your ERC is complex, with an electronically regulated oven and/or a crystal oscillator circuit, you will definitely need some factory data to use it. If you know where it came from, perhaps that equipment will have a circuit diagram to show how it is hooked up.

I went through my collection and found three old octal-base ovens, but none were ERC.

It was possible to remove the outer cover of each. One was potted so thoroughly that it was not possible to see the wiring to the octal base, but the other two were easy to see. Wiring to each was slightly different, so I'd hesitate to recommend one.

If yours has a simple thermostat and heating element, you may be able to find two pins that are close to zero Ohms. These would be the thermostat contacts. Between these and one other pin would be the heating element, in the order of several hundred or a couple thousand Ohms. You would have to devise an experiment to determine which of the thermostat leads is common to the heating element.

If yours is just a crystal oven, not an oscillator, then the crystal should oscillate in whatever circuit you use. You can rig-up a simple crystal test oscillator, and test various combinations of the octal plug connections to find which are the two crystal leads.

None of mine had a connection to the metal case, but yours might.

Does anyone have a Drake AC4 or AC3 PS for sale? I
don't need the loudspeaker cabinet although it would be nice
to have.
Please contact me via private e-mail.

Hi, can anyone direct me to a link that has a downloadable free manual
for the realistic DX-302 receiver. Any help would be greatly
appreciated. Thanks.

If your Orion II (model 566) has turned out to be more rig then you want or more rig then you need, maybe we can get together.

I have an Omni VII with the built-in tuner, 500Hz and 300Hz filters installed, and optional external fan. It covers 160m through 6m. I use it mostly on PSK31 and CW. It is absolutely Like New. It of course comes with the original book, the Original box, etc. and I will include a pair of Swiss Ear buds, which are great for CW. The latest version of the firmware is loaded.

I am located in Jacksonville, FL. If you are within 150 or so miles and are interested in trading rigs let's talk. I would prefer not to ship the rigs, for the obvious reasons.

If we can meet, then you can see how the OMNI VII operates and I can see how your ORION II operates.

I am interested in an Orion II model 566 (ONLY) with the built-in tuner and at least the 500Hz filter and the optional fan. The latest version of the firmware has been installed.

My email address is: kz3dx@yahoo.com

Thanks,
Bill

I'm looking at a radio for satellite communications work.

Has anyone used the Yaesu VX-8R for talking over satellites. How about
the Kenwood TH-D7A.

Thanks for any insight into these radios.

-brad w.

Brad,

The TH-D7A would be the better choice. It's capable of transmitting and receiving simultaneously on 2m and 70cm. That allows you to hear you own signal coming down from the satellite. It forces you to wear a headset to prevent feedback, but you'll soon appreciate receiving while transmitting to make uplink Doppler frequency corrections to keep you full quieting into the birds.

TH-D7As are hard to come by since Kenwood discontinued them. They are available overseas, but very pricey.

73 es GL

Glenn AA5PK

The VoiceMax speech processor is not for everyone...
It's only for radio operators that want maximum range from their rig.
VoiceMax is no gimmick... it uses proven AGC technology to produce
tangible results. Want to know more?

When I plug in the speaker mic to the TH-F6A I can transmit but no one can hear audio from my radio. I have checked option 9 and sp.mic is selected as the option for the speaker mic jack. Anyone have any ideas what the problem could be?

> When I plug in the speaker mic to the TH-F6A I can transmit but no one can
>hear audio from my radio. I have checked option 9 and sp.mic is selected as
>the option for the speaker mic jack. Anyone have any ideas what the problem
>could be?

I can think of at least three possible causes:

- A bad SMC-34 - maybe a defective mic cartridge or a broken wire somewhere else.

- A bad speaker/mic jack in the TH-F6A

- A fault in the TH-F6A circuit which is supposed to provide a current-limited DC bias voltage to the microphone.

The best way to narrow down whether it's the mic or the radio is to use the field engineer's favorite approach: substitution. Try your existing SMC-34 on someone else's TH-F6A and see if it works. Try a

known-good SMC-34 (or an MFJ or another vendor's speaker/mic which is
compatible with your radio) on your TH-F6A and see if it works any
better.

MTV 3. 07.06.2008. "Norjassa tuulivoima my�t�tuulessa. Norjan
energiatarpeista PUOLET voidaan kattaa tuulivoimalla, kun nykysuunnitelmat
toteutetaan! Kaiken kaikkiaan 130 tuulivoimalapuistohanketta on haettu
rakennuslupaa Norjan energiavirastolta. Jos kaikille halukkaille my�nnet��n
lupa energiantuotanto kasvaisi 56 terawatttitunnilla, mik� on noin puolet
maan nykytuotannosta. N�iden lis�ksi 19 tuulihanketta on saanut
rakennusluvan, mutta rakentamista ei ole viel� alettu."

*Niin.. ..MYKIST�V��! .. On jo p�iv�n selv��, ett� Tanskan ja Saksan
uskaliaat uudisenergiairtiotot ovat saamassa arvoisensa triumfin. Maailman
energiaj�tit alkavat k��nty� ennenn�kem�tt�m�n massiivisesti pois
ydinmenneisyydest� ja suuntaavat tuhdisti turpoaville
uudisenergiasektoreille. Erityisherkkuna on nimenomaan toimivimman
offshoremerituuliosuuden aukeaminen. Kun jopa Englannin kaltaiseen
pataydintaantumusvaltioon rakennetaan parhaillaan maailman masiivisinta

Loviisaluokan ofshoretuuloipuistoa, ydinalan korttipeli p��ttyi t�yskaatoon. Ja kohta s�hk�verkot my�s kautta Pohjolan suorastaan notkuvat tuskin en�� kymmenesosaa ydins�hk�kustannuksesta maksavaa 100% saasteetonta bulkkiekoenergiaa. 100% s��dett�v�t ja puolisen vuotta sitten Norjan Trondheimissa mitatut k�sitt�m�tt�m�n hyv�t tuulivoiman ***99% vuosipysyvyyshy�tysuhteet NELJ� kertaa paremmat kuin ydinreaktorirumiluksilla ajetut enemm�n kuin vakuuttivat.***

T�ss� on tulossa sellaiset energiantuotannon poistumat ydinvoiman kaltaisista uudiskyvytt�mist� vektoreista, ett� ydinvoiman mustapekka sopeutumiskyvytt�m�lle Suomelle on varmentumassa. T�h�n settiin kun Viro julkaisee tuuliaikeensa ja saadaan ilman muuta Ruotsi mukaan, niin ydinsuomi sotketaan mukavasti ydinsuohonsa, jopa omilla s�hk�markkinoillaan. KUKAAN EI TARVITSE sikakallista s��t�kyvyt�nt� ja EU:ssa maineensa mokanutta ydinvoimaa. Tulemme n�kem��n sellaisen ydinvastarinnan n�emm� MY�S talousmiesten jaloin ��nestyksin, ettei mit��n jakoa. HIENOA!))

I have a Yaesu FT212RH and I want to use it as an anouncement machine,
through the computer to transmit. One, are there any mods to the rig
that I need to make. Two, I founf a cable that has db9 and audio
connectors for this rig on shacksupplies.com, a UK company. The
product is MC02YA. Would this be what I need? Or would I be able to
do this with a regular programming cable that just goes from the mic
to PC? Thanks for the input!!!

Looking for the old Scancat 6.0 or a working copy of the Exporer. Exe
program or any program for that matter that will allow me to change the
US Bandplan to the Euro Bandplan in my AR800.

73

Mike

Wow, that brings back memories. That is a receiver which came into
being right around when I did (1950's).

The tubes in it alone worth something (can be hard to get replacements
these days, just price them!)

I sat before one of those for untold hours in my younger days ... shame
SW is so empty these days ... :-(It was an EXCELLENT RECEIVER ...

Regards,
JS

A very common modification, especially by the Navy, was to add a jack
there to monitor the diode load voltage, this makes their regular
maintenance much much easier. NAVSHIPS-0967-063-2140 documents this.

Such as traffic light electronics.

Without error correction protocols being employed, you are also at the mercy of multipath interference. You're QRMing your own signal. 8>)

Polarization could be a factor.
Reflections change the polarization appr. 90 degrees.

Rotate the antennas left & right to find out.

(you did not mention your type of antennas)

Have you tried relocating the office transceiver? There might be something about the office environment that is interfering with its transmission.

wow so many of these replies are wrong..

in almost all cases, RF path losses are RECIPROCAL.

(even a 1/2 silvered mirror is reciprocal to light)

As some have said, the cause of your issue is probably interference to the outside receiver.

Or maybe something about the indoor setup is causing the indoor Tx to operate at lower power.

It is very unusual for RF path loss to be non-reciprocal.

Mark

If I remember my antenna/propagation theory correctly, such a change
should affect both the transmit and receive gains equally. That is to
say, if moving the office antenna lower will reduce its transmit range,
it will also reduce its receive range.

What you are looking for is something that is reducing the office end
transmit power while leaving its receive sensitivity intact. Someone
else suggested an SWR problem due to near field interference with the
antenna.

Most likely scenario.

Also make sure that in your design you are powering down the transmitter
fully in the receive mode. In some radios there can be a residual
carrier from the PLL causing self interference ar interference to other
nearby nodes.

That's what I think is the most likely cause. The guy outside probably has
his Nextel phone with him. ;-)

> Or maybe something about the indoor setup is causing the indoor Tx to
> operate at lower power.

I suppose that's possible too. The OP should make sure the power supplies
are equivalent (meaning that the output power would suffer more than the
receiver gain with a drooping supply). So check the indoor supply.

It is assumed that the path to and from the office should be inferior
to the line of sight path out on the street. This may or may not be
true. The building may actually be offering gain in certain
directions. I would start by seeing if the same condition existed at
many more locations. If it does then other ideas need to be examined,
I would start by examining the RF environment outside the building.

Jimmie

Hi Denis,

That is a lot of power for a problem of losing contact in the space of blocks.

>What we have repetadly found is that the radio in the office can

A very good description of the symptoms and relations.

>We did think we had identified an interfeering source in one direction

>(when moving away from the office) so we started moving in the
>opposite direction. We found exactly the same effect.

A good test for reducing variables. If you identified an interference, I would presume you could do that again in the other direction.

>Are we getting interfeerance from GSM, ISM or Paging?

Only if the remote set was nearer to an undiscovered interferer. You seemed to have resolved that once, and you should be able to detect the similar occurrence again.

>As far as GSM bands go in Europe 890�915 MHz OR 1710�1785 MHz So these
>shouldnt be our problem.

This is a flaw in the logic. Your frequency of operation is very close to these bands - unless your sets have been designed with elaborate front end tuning (which seems unlikely).

>Can anyone shed light on this phenomonon? Is it an issue of wireless
>propagation that Im not familiar with or is it Interfeerance?

One component not discussed is the remote set's proximity to the operator. The operator could disturb the local field (aka shield). Going beyond is the effect of a Fresnel Zone, but your descriptions describe a complete black-out. To test this requires you to go further away to see if you pick up the signal again. This is a long shot, however, as the effect would be distinct within the space of a meter or so. For mobile operation, the Fresnel Zone creates what is called "Picket Fencing" as the signal comes and goes quickly with distance traveled.

Perhaps it is the proximity of a Pub, and your operator stopped in for a Guinness.

I'll second Pere and Anthony. Strong out-of-band signals is what I found mostly in situations where path losses seemed strangely non-reciprocal.

Post a schematic. One possibility is that your receive input filter is wide open like a barn door and GSM swamps the receiver.

Another option if you have a spectrum analyzer: Hang a large near-field probe into a long cable, tape it to a broomstick and hold that out the window for a while. See what pops up on the screen. If this is in a city be prepared for some commotion among the pedestrians down there :-)

Hey:

My crystal balls are saying:

Multipath where a reflected signal from the source is being cancelled out in the zone sort of like standing waves. It's like waves in a bath tub they bounce of the sides and produce more interference waves, and so on. Or FM broadcast stations signal in the big city with tall buildings, all of a sudden the signal just goes puff while you're driving along downtown.

I'd say gits your antenna near a window or put up an outdoor antenna.

Get battery packs for your radios that take AA Akaline batteries.
Carry extra batteries in your "go bag". Rechargeable batteries are a
liability during emergencies, what if there is no power to charge
them. When a set of the AA's go dead, open the case, put in new ones
and you are back in service in seconds.

Hi guys.

I have just been given a Wagner HF SSB radio, model 1829 MR, and I am
looking for anywhere I can buy parts or download a manual for it.

The radio works fine, but it needs a mic and antenna.

Any help or advice would be greatly appreciated.

Garry

wow so many of these replies are wrong..

in almost all cases, RF path losses are RECIPROCAL.

(It is very unusual for RF path loss to be non-reciprocal.

Mark

I agree. But, one thing that should be proven is that both modules
are working as intended. The one being used for the remote
application *could* be defective. Swap modules and see if the
receiving problem also switches locations, or remains the
same.

Pete

Hello,

There should be a reciprocal relationship between the modules
regardless of height, antennas etc. as long as TX power and RX
sensitivity of the modules are the same (which they appear to be).

The modules are unlikely to have very good input filters at 868MHz, so
any adjacent channel interference (GSM etc.) is likely to cause the
out of balance behaviour.

Try heading in a different direction outside, or go somewhere else
with your experiment.

For your real world application, are you likely to have any site close
to adjacent channel transmitters (cell or broadcast) ? If so, think
about a decant front end filters. This could be costly, but might save
you...

Regards,

Mark

news:159dee31-5436-4f46-ae9d-48214eec09ca@k37g2000hsf.googlegroups.com...
Hello All

We have a propagation issue that is confusing us. We have two 868MHz modules on test, each capable of 500mW transmission.

We are testing to find the range of communication. We are testing them as follows. One remains in our office while the other is taken to the street outside. we are communicating charecter strings such as "Im at the lamp post number 1" etc. There is somebody at each end sending text strings in a continuous conversation. There is no protocol, error checking or error recovery.

What we have repetadly found is that the radio in the office can receive long after the radio in the street has stopped receiving. (The person with the radio in the street is moving away from the office.)

The radios are the same and the power supplies to the radios are the same. Indeed switching the radios gives the same effect.

The propagation paths between the two radios are the same in terms of distance. However the radio signal transmitted from the office travels through walls first before then traveling through open space. Its the

opposite for the radio in the street, firstly traveling through space
and then through the walls in the office.

We did think we had identified an interfeering source in one direction
(when moving away from the office) so we started moving in the
opposite direction. We found exactly the same effect.

Are we getting interfeerance from GSM, ISM or Paging?

As far as GSM bands go in Europe 890�915 MHz OR 1710�1785 MHz So these
shouldnt be our problem.

ISM is where we intend to operate and the greatest band occupancy
should be 10%. So we should get communication even though we would get
some interfeerance.

Paging - well this has very much gone out of fashion in Europe. But
even if it was the cause then wouldnt it be intermittant
communication. We have a constant problem.

Can anyone shed light on this phenomonon? Is it an issue of wireless
propagation that Im not familiar with or is it Interfeerance?

Best regards, and thanks for any input.

Denis

____
http://www.CentronSolutions.com

its interesting that a commercial company would bring a problem such as this
to a bunch of amateur radio operators... true some of the amateurs may be
professional engineers, but the remainder are not! I guess that in today's
market place we try to gain information on the dirt and cheap way.

What is the modulation type and data rate? Could be a delay spread
issue. Maybe the outside unit is receiving a reflected signal from the
surface of a nearby structure and is experiencing inter-symbol
interference that by chance the base unit is shielded from. This would
occur only if a high symbol rate was being used.

Nah, that's ok. Every one of us occasionally runs into an unusual situation. Then one can either stew on it for days without getting to the ground of it, or ask. IMHO it is a sign of maturity if somebody has the guts to say "Hey, guys, this problem here really has us puzzled".

That is especially true for EMI cases and this sure looks like one. Sometimes a brief hint by someone who has been in the trenches for decades can get things going again. And most older ham radio operators had that exposure, fixing the neighbor's electronics because their manufacturers messed up.

I have never heard of that brand of radio, Garry. Is it intended for amateur
use, or a general HF rig?

The OP said that he did that, and the problem remained. It's certainly a desensing problem due to local interference at one end. That's the only possible cause.

I noticed that my IC-7000 is slightly off frequency, both receiving WWV and counting the transmitted signal. Twenty MHz WWV appears to be about 12 Hz high after the radio has warmed up. I realize this isn't much, but it is outside the radio's 0.5 ppm specification.

The IC-7000's 24.8064 MHz reference oscillator is used to generate the synthesizer clock as well as the second and third local oscillators. It does not appear to have a variable capacitor or inductor for its adjustment. Instead, it is voltage controlled. Apparently the voltage is adjusted to correct the frequency, and the value is digitized and stored in non-volatile memory.

The service manual provides a method of setting the reference oscillator's 5th harmonic to 124.032000 MHz. It was slightly off, so I adjusted it. However, the original error did not appear to change.

Has anyone else experienced this discrepancy? Is it possible that the value given in the service manual is in error?

Fred

what type of amateur radio application is this for? Or is it a commercial application posted in this amateur radio group? just wondering

Hi Ed.

It has marine channels installed and I do hope to use it in my boat (Yes I do have the licences for it) so I dare say it is a marine HF SSB.

Apparently they were a very good brand in their day, but they are getting old now.

Best regards

Garry

Don't know where you live, but if you are in the USA, you should check
the FCC to make sure that radio is Type Accepted for NEW Installations
on US Flagged Vessels. There are a LOT of older Marine Radios that do
NOT now meet the Technical Specs of todays Type Acceptance Certification
and therefore can NOT be Fitted.  The can still be used, IF they were
installed before the Cutoff Date, for their Type Acceptance Expired,
under the GrandFathering Clause.

Hi Bruce. Thanks for the tip and that is an interesting one that I had not heard of.

I actually live in Australia so I should check out our version of the FCC, namely the ACA.

Maybe I may just need to bight the bullet and go ahead and buy a new Icom M700 Pro24 unit?

Garry

Fred McKenzie <fmmck@aol.com> wrote:

> The service manual provides a method of setting the reference oscillator's 5th harmonic to 124.032000 MHz. It was slightly off, so I adjusted it. However, the original error did not appear to change.

It turns out that the setting of the oscillator didn't "take". I made the change and pressed the SET button. However the oscillator frequency had not changed after exiting the ADJUST mode.

Well, it really did take, but only when in the ADJUST mode! There must be some other way of changing the reference oscillator frequency when in normal operation, but I can't find it.

There are a couple other oscillator adjustments that don't appear to relate to the reference frequency. They appear to require access to the back of the front panel electronics, which is quite a challenge!

Denis,

I agree with some of your previous posts - the outside receiver is likely being desensed by a strong signal, perhaps away from or a harmonic of the frequency you're using. I suggest trying the test away from town and at least 10km from strong transmitting towers. Let us know what you find out - may help those of us who do UHF/VHF mobile/portable hamming.

As a ham I have NOT PROBLEM with the commercial community asking questions on a ham radio group - we can ALL learn from this.

Cheers,

Dick Post, N7EMW

i was thinking about that...but no....

all the multi-path paths are reciprocal as well,,, so whatever the
delay spread is one way should be the same the other way.

Denis,

I agree with some of your previous posts - the outside receiver is likely being desensed by a strong signal, perhaps away from or a harmonic of the frequency you're using. I suggest trying the test away from town and at least 10km from strong transmitting towers. Let us know what you find out - may help those of us who do UHF/VHF mobile/portable hamming.

As a ham I have NOT PROBLEM with the commercial community asking questions on a ham radio group - we can ALL learn from this.

Cheers,

Dick Post, N7EMW
www.repdesign.us

****
I don't know why I don't get the > on your response, but whatever.
He can get some feel for what is going on by taking *both* radios outside near his office, and walking around. He should be able to find a particular area that has poor reception. I don't buy the explanations for antenna gain and multipath, they should affect both directions of transmission equally.

Tam

Since most of the posts, in their "EXPERT OPINIONS", relate to your
receiver being "de-sensed", do you have a way of negating/affirming this?

Begin there, and we can get down to "real problems!" :-) i.e., a
wide-band field strength meter, freq counter, etc. will either make all
this "right" or "wrong."

Regards,
JS

Desense is definately a possibility, but I still believe that it's at least AS good a chance that it's a standing wave issue on the office end. Others have said to take the 'office' radio outdoors and test the setup that way. That's a good (and simple) test.

I'm /still/ more inclined towards a desense problem - cities are astonishingly noisy these days throughout the RF spectrum. I've recently had 4.9 GHz data transmission problems that were eventually traced to a harmonic of a nearby surveillance TV transmitter!

Desense caused by out of band signals if of course possible when we
talk about such toy receivers as most wireless LAN or wireless
headphones are.

However, since the 868 MHz band is a non-licenced band, it is quite
likely that there might be other transmitters (e.g. wireless
headphones) in the area of the moving transmitter, but not near the
office transmitter.

Give a spectrum analyzer to the moving station operator to monitor the interference level in that frequency band, when the moving transmitter is off. A scanner receiver with a decent signal strength indicator might even suffice.

>Desense is definately a possibility, but I still believe that it's at least
>AS good a chance that it's a standing wave issue on the office end.

This is out of the question for any single frequency half duplex connection, since the path would be reciprocal. In a full duplex dual frequency point to point system between two _fixed_ station, this would be definitively possible. Even in this case, moving the other station by 10-30 cm, you would find a spot, in which there is a good connections both ways.

Based on my experience at 1297 MHz with a narrow band (16 kHz) signal in urban environment, you definitively have a lot of multipath nulls (several nulls every meter), For speech communication, this is not much of an issue, the faster you move, you have hundreds of nulls every second and it does not much affect the readability of the speech. The only problem is that if you stop at a traffic light, you usually will end up in a multipath null and the communication is broken, unless you can slide the car a few centimeters.

>Others
>have said to take the 'office' radio outdoors and test the setup that way.
>That's a good (and simple) test.

The OP did swap the radios, but he did not tell if the power supply was also swapped. If the office power supply was faulty and the office transmitter could not deliver the nominal power, this could explain the situation.

Paul

We would like to be able to do computer analysis of the HP-8558B data. Has someone built an interface to get the data into a PC and is there some software that would do the analysis? I guess that we could resort to digital photography of the screen and then scan the picture into the computer? We would still need some software to do the analysis.

Have any of you done something like this?

Thanks,   Don and Liz

I've gotten data out of a spectrum analyzer of this sort by hooking a digital oscilloscope (one with data-capture capability) to the auxiliary X-axis and Y-axis display outputs on the analyzer back panel. By triggering on the first part of the rising edge of the X-axis sweep, capturing both axis signals simultaneously, and then uploading the data from the 'scope to a PC, it's then possible to reconstruct the trace on the screen from the resulting data pairs and then do analysis.

A two-channel ADC (perhaps USB-based?) could be used in the same way.

Due to damage to the logic board in an IC-7000, I have the following
parts that can be purchased. Removable head for the IC-7000, $50.00
plus shipping.  Icom HM-151 microphone for IC-7000 with the AB5N
modification  $105.00 plus shipping.  Radio unit for $150.00 plus
shipping.  Buy the whole IC-7000 for $300.00 and have Icom install a
new logic board for $650 and you will have a great rig with only
$950.00 plus the Icom warranty.  I also have an "INTEC" 5.4 inch color
LCD monitor (runs on 12 VDC) with cables to connect to the IC-7000 for
$75.00 plus shipping.

Gee yes: Just because the final amp. of a transmitter is rated 100
watts DC input and may put out 70% of that as RF doesn't mean the
whole unit 'uses' 100 watts!
If it is a tube unit with tubes to heat and standby and a receiever
portion it could easily be consuming several times100 watts. Measure
it!

HI all from Ken, G4KIR,

I am looking for the 'RX Band Pass Filter' for a "YAESU FT1000" (BPF-1).
If anyone has one of these spare, or do not use the one in there radio (D version), then I would be pleased to purchase it from you.
I will pay a good price for the right unit of course.

All the very best to you all, Ken, G4KIR   k.chattenton@btopenworld.com

Ive never had problems running my 100w PEP ICOM on 12 volts. I suppose
it puts out a little less power. Never measured it on 12 volts.

Jimmie

Strange things happening with my old Sony ICF-SW55...

SW frequencies seem to work fine... LW and MW frequencies don't work.

FM doesn't work - in fact, the radio locks up when FM is selected.

I can get the LW and MW to 'work' again by touching various parts of
the circuit board with my finger while the back is off.

Display shows "CAL" at switch on, which I suppose is some kind of
calibration routine?

Can anyone help with some ideas?

Thanks.

First, try in safe mode. Windows seems to want to do everything but what
YOU want to first. Then read back to see if the radio got what you
programmed, look at the saved file and compare it with a saved file from
what you programmed. Also, see if some of the channels have been hidden.

Hmmmmmmmm.
Read but no write...

It claims to work with SP1 or greater but SP3 wasn't around yet.  You may
need to unload a bunch of stuff in task manager.  Maybe go the shortcut
properties and run as a win98 program or something.   Did you fiddle with
buffers on the com port?

I did have problems with mcp2000 (similar) with my PL2303 usb-serial dongle
until I found a specific driver version for it.  After that I was even able
to program DOS RSS programs under XP.  You might have a serial cable problem
or hardware driver issue with your machine.  Rotsa ruck.

I got kind of tired with mcp because you have to still program one channel
at a time anyway.  I have been using Excel for memory management in my
ts2000, and it does well.  Allows me to cut and paste entire banks.  The
271.mcp file structure is similar but the parameters look different.  It's
just a script file.

I have a Kenwood ts440s w auto antenna tuner. I am running a g5rv antenna and the auto does not tune on all bands. I know I need an external manual tuner, but do I get the one with the balun built in or not. I have an airwound balun at the feedpoint for the coax from the ladderline of the antenna? That is for current prevention on the outer part of the cable as per manuf. instructions, dont think I really need that though.
Thanks

Compared to the MFJ 989C roller inductor tuner with the built-in 4:1 balun, I have not been able to match the 989C's very wide tuning range with a smaller 300 watt tuner running into a 4:1 balun. It is my suspicion that if you need a long of "tuning swing", you'll likely not find it by running a normal 50 ohm tuner into your 4:1 balun. It hasn't worked for me in the past. Of course, I haven't tried every MFJ tuner that would meet the criteria, much less all of the other brands of tuners.

An antenna tuner (matchbox/transmatch) transforms one impedance to another via the operator's manipulation of variable capacitors and inductors.

By the strictest definition of the term transformer, the transformation of impedances occurs via the inductance of coils that are mutually coupled, plus any stray capacitances in the circuit. The transformer is usually non adjustable, unless various input/output taps have been included on the coils througout the primary/secondary/both sides of the transformer.

Even though I've owned and operated my share of Kenwood rigs, and never
heard of the problem that you describe, it surprises me that the squelch is
not intended to work in any particular mode. Which mode is your squelch
inoperative?

Hello!

After 13 years of publishing my WEB I have decided it is time to start
another Internet project (in parallel with the WEB) and have created
my BLOG, called RadioRepair :-). You can access it at:

http://radiorepair.blogspot.com/

I have just posted my first article which is about the repair of a
Kenwood TS-790 which was done last week. I hope you like it and, of
course, your comments :-)

Thanks and best regards,

73 JOSE EB5AGV

It's odd.  There were some SSB only VHF rigs in the seventies, and
they generally did include squelch (though I have no idea how
well they worked or if people actually used it).

Then the multi-mode rigs came along, and at least some of those
rigs had squelch that only worked on FM.  I'd guess it reflected
operating habits, you want the FM rig left on in case someone
hits the channel, but for SSB you generally aren't just waiting,
you are actively tuning.  Plus, you can get a feel for where
to set the squelch for local FM, but how much would you miss
if you had the squelch turned too high?  By the time you get
the rig squelched on SSB, you likely are missing the weak
signals.

I imagine that's the case, and a search reveals this is an
HF rig, not a VHF rig as I imagined, and the squelch only
works on FM.

That makes sense, I can't imagine people wanting squelch much
on HF SSB.

The same search turns up at least one mod that may or may
not be useful.  Just the rig's number and squelch into
the search engine.

   Michael  VE2BVW

I have a Yeasu ft221 for vhf that stays on all the time. It did not come with a squelch for ssb but did for FM. I found a way to squelch it for ssb. Almost all activity on vhf will be on 144.200 or 50.125 to start with. It is seldom the band opens that this is not the starting point. With two rigs on, one for 2 meters and one for 6 meters, it would be loud in the shack if they did not have a squelch for ssb. Also there are some local hams that monitor certain frequencies on 10 meters for local work and the squelch comes in handy there also. Same for some special interist groups and nets on the other bands.

I would miss the squelch on the rigs if they did not have them. Lots of times I monitor an 80 meter frequency while working on the computer in the shack and do not want to hear all the noise if no one is talking.

I owned the 680S years ago and the same mod applies to it. I never did

it so I can't
report anything about how well it works. How easy it to reverse the mod
if you try it and don't like it.
John

I have a friend with a modern solid state rig with built-in auto AT, also,
and he cannot match all of his antennas on the appropriate bands, either.

I gave (he actually bought it from me) him one of my small manual
ant tuners and it matched up fine with negligible reflected power.

You may have to do the same thing, but you should read your manual about
how to disable the internal automatic antenna tuner.

I presently own an Elecraft 4:1 100 watt balun and I'm running a Van Gordon All Bander antenna that is fed with 450 twinlead.

My Yaesu FT-890/AT's tuner can usually find a good match wherever I go. Now and then I find a place where it won't match up, but the great majority of times it matches perfectly.

My Icom IC-737's autotuner was almost as good at matching on my present antenna as the Yaesu FT-890/AT.

I wish that an autotuner manufacturer would recognize the market for folks using antennas fed with twinlead and offer us an autotuner designed to operate accordingly. Were the price reasonable, I would be there buying like stink on manure. A high power version would be attractive to me too.

Ed, NM2K

On the rotor body there is a cover plate where the wires connect. Each number on the rotor has a matching number on the controller. Wire number 1 on the rotor goes to 1 on the controller, 2 goes to 2, 3 goes to 3 and 4 to 4.

I just installed my third HAMIV rotor; I got about 4 years each from the previous two. The most recent failure was the pot, with 5-6 turns worn through at the spot I usually leave the rotor. Makes me think the brake wasn't working very well. The previous unit was freewheeling; I don't remember exactly what was wrong. The screws holding the case together are always corroded in place so any repair becomes less trivial as they break off. And anyway the inside usually looks bad enough (with lots of rusted ball bearings) that repair is unappealing.

On the current (new) unit I noticed that one screw hole for the control cable cover plate was stripped (and they should have noticed too since the screw was hanging out) and one mounting screw hole was not tapped to full depth (I had to get a shorter bolt).

I bought the first HAMIV about 8 years ago to replace a HAMM from the 60's (IIRC). They say the HAMIV is an improvement but it certainly doesn't seem to last as long. Is there another rotor with the same mounting pattern that might be better? It's an inside-tower mount so I'm kind of constrained. Maybe I should look at rebuilding the HAMM? It was seized but I still have it.

If anyone wants the two failed HAMIV rotors for parts let me know or I will probably toss them soon...

That sure sounds like a short life for a rotator. As you have it inside the
tower (?) I guess that you have a thrust bearing at the top of the tower.
Are you near the salt water or in a very windy place ? Do you contes with
it and turn it a lot ?

I put one up about a year ago that was used,but rebuilt. I am not in an
area that is very hard on the rotators. I hope it will last longer than 4
years. It is in the tower about 5 feet down and I have a thrust bearing at
the top. Just truning a 3 element tribander and beams for 6,2, and 432 on
15 foot booms.

Hello,

I'm looking for some expertise on how to convert the receiver I have, without tuning wheel, in a receiver with tuning wheel. I tryed to install a suitable shaft encoder but it seems to me it need different fw version. Any help?

Claudio

|
| That sure sounds like a short life for a rotator. As you have it inside the
| tower (?) I guess that you have a thrust bearing at the top of the tower.

There is a collar; I'm reluctant to elevate it by calling it a bearing but
it does prevent any significant mast bending moment from reaching the rotor.

| Are you near the salt water or in a very windy place ?

Yes, about a block from the ocean.

| Do you contes with
| it and turn it a lot ?

I don't turn it a lot and I always leave it in the same position since that is the position that allows me to lower the tower and I wouldn't want it stuck in some other position. Obviously this isn't great for the pot if the brake isn't working well.

But none of this explains the reduction in life compared to the old HAMM (I think we are talking nearly an order of magnitude) or the screw hole tapping problems with the latest unit. Was there a stainless bearing option (perhaps third-party) for the HAMM? That might have had something to do with it. Other than the bearings (and of course the pot) the latest failure doesn't look *too* bad inside.

Dan,
```

I think you may have answered one or two of your complaints. I also think you have had a couple of 'manufacturing defects' that the company really ought to fix.

Because of where you live, you are going to have corrosion problems no matter who makes your rotor. About the only simple means of reducing that corrosion problem is regular maintenance, more regular than 'normal'?

Two 'duds' in a row is sort of unusual. That tends to tell me that quality control may not be the 'best' in the woprld, or at least could be a little better. I'm sure they won't jump for joy with another complaint, but I certainly think I would complain if it were my rotor!

Good luck.

- 'Doc

Dan,

Since you live so close to the ocean, you might want to try and coat (spray paint) the rotator assy with NEOPRENE PAINT. (This paint is waterproof & impervious to salt water & diesel fuel and you should be able to find it in either a well stocked hardware store or paint supply store).

You also might want to coat any open antenna connectors as well as any coaxial connectors.

Your other option would be to coat your rotator with a 2-part epoxy based paint, although this is rather expensive, and if you had to take the rotator apart it would be a BEAR OF A JOB! Personally, I would stay with the NEOPRENE!

If you're bringing coax into the shack then there's no need for a

balun built into the external tuner -- but a bigger tuner may work
better than a smaller one, by virtue of its wider tuning range.

The g5rv works best on 80, 40, 20 and 12 meters, so what your internal
tuner is already doing may be about what you should expect, anyway.

Yeah, but somehow it didn't seem worth the bother. I was up on the tower
when I discovered the short-tapped mounting hole and of course at that
point it was easier to get a shorter bolt.

| >   Because of where you live, you are going to have corrosion problems
| > no matter who makes your rotor.

Although the corrosion makes the rotors unappealing to work on I don't
think it was the cause of the failures.

| > About the only simple means of
| > reducing that corrosion problem is regular maintenance, more regular

| > than 'normal'?

Perhaps, though I still wonder why the HAMM faired so much better. In order to do any kind of regular maintenance I think I'd have to replace the bolts that hold the case together with stainless in advance since they rust in place very quickly.

| >   Two 'duds' in a row is sort of unusual.

Three duds...

| > That tends to tell me that
| > quality control may not be the 'best' in the woprld, or at least could
| > be a little better. I'm sure they won't jump for joy with another
| > complaint, but I certainly think I would complain if it were my rotor!

Yeah, again it just doesn't seem too productive. I'm sure they would be happy to have me ship back the latest one and I could wait around for a replacement with my tower down. (I put it up today.) I think I'd rather look for an alternative product or revisit the HAMM which I still have.

| Dan,
|
| Since you live so close to the ocean, you might want to try and coat (spray
| paint) the rotator assy with NEOPRENE PAINT. (This paint is waterproof &
| impervious to salt water & diesel fuel and you should be able to find it in
| either a well stocked hardware store or paint supply store).

I'm not sure how this would help in more than a cosmetic way. You understand that the rotor is not sealed, right? There is a gap between the bottom of the bell and the mounting plate. It points down so water shouldn't be *flowing* in, but the insides are certainly exposed to the weather. The only thing keeping the bearings from rusting is the grease, and the retainer strip really can't insure that they are always fully coated. The more I think about this the more I remember stainless bearings in the HAMM, though it might have been an after-market modification.

| You also might want to coat any open antenna connectors as well as any
| coaxial connectors.

I've had good luck with a tight spiral wrap of ordinary vinyl tape. Just took apart some connectors that had been up for more than a decade and they were shiny as new. Lately I've also been filling the insides with STUFF dielectric paste but I'm not sure this makes much difference.

Dan,
   There's no 'fool proof' way of 'fixing' any rotor that doesn't mean a lot of inconvenience in some way. Picking the most palatable inconvenience is the 'trick'.
   "Productive"? Uh, yeah, I agree with you, probably not very productive, But I'd do that complaining anyway. Who knows, they might really surprise you (and me :)).
   Which solution is the best? I have no idea.

Howdy,
```

In the 70's I worked on a project developing dual use small
boat radar. We had a terrible time with bearing corrosion at
first.

You might want to try wash-out resistant grease intended for
boat trailer wheel hubs.

In the radar we eventually used Andok C which is no longer
manufactured. Nye developed Rheolube 374C as a replacement
for Andok C. Both are an NLGI Grade 4 grease,

McMaster-Carr has a good selection of stainless steel bearings
and they have ceramic balls for bearings I believe. I'd want
to play with those a bit first before putting them up on a
tower.

73,
Grumpy

Good advice.

Most folks instantly think of stainless steels for corrosion protection. However SS is not a particularly corrosion resistant material around salt water. All commonly available grades of SS are subject to halogen corrosion, i.e. chlorides in sea water. Before retirement I worked at Eastman Chemical company in their research laboratories. They frequently had to resort to rather exotic alloys, such as Hastelloy C-276, for applications where halogens were involved. These alloys tend to be extremely expensive and nearly impossible to machine.

I would suggest using lots of a good grease and frequent maintenance if your rotor is exposed to salt air.

I had that exact setup that you have and I had to use an external tuner to get the swr down to acceptable levels. If I remember right, the g5rv with the 440's internal tuner would tune ok for 80 and 40, but not very well for the other bands.

HI, I'm a novice doing community service communications backup 2-3 times
a year preparing for the next emergency. Which is the better radio for
me and why if you don't mind my asking?

Is Li-Ion better for me than NiCad or NiMH?

Would the LI-Ion output of 7.4 v reduce the 5w output power of the HT
vs a 9.6 NiCad or NiMH?

Can Li-I remain plugged in to a trickle charge for months?

Thanks for your time

Does anyone have the schematic for the pinout of the usb connector on
a generic usb mono headset with electret microphone. I'd like to try
and operate one of my HF rigs with it. Thanks.

Huh?

If they are USB, the "standard pinout" would be the same as any USB connector, ie a pin for ground, a pin for +5v and I guess two pins for data. But unless you have an actual USB connector on your rig, knowing that won't mean a thing.

Afterall, you can't make use of a digital signal, which is what those USB things are about.

You need to chop off the connector, assuming the digital electronics is hidden in there, and then figure out which of the wires coming off the headset are for microphone, speaker and ground. Then you wire it to a connector that matches what's on your rig.

I have an old Hallicrafters Transceiver that uses TRW PT5651 RF transistors as the Driver and P/P finals. It is a 10 watt 2-18 mhz transceiver used in the early to mid 60's. The finals are shot and I am looking for replacements. I can not find data sheets, specs, are any information on these anywhere. Its like they didn't exist. I am looking for any type of replacement. I can't even tell if they are Pnp or NPN. They are single stud mount, with 4 solder tabs. The curcuit is broadband, and the B+ is 12-14 volts.

Thanks for any help.

Thompson Raito Woolrich was bought by Northrop Grumman a few years ago.  I
doubt it but you could always try their parts division.

No marking of any kind on the unit.  But I believe to be a
Hallicrafters TR-9.

You need to find out whether these are pnp or npns.
I have used 2N6083's to replace npn hf outputs before. They worked fine.
I think they are only capable of 30 watts output. They work fine with 12
volts. They only cost about 4 bucks a pieces at

I believe that I used to have one of those. It had a 6kHz mechanical filter, a roller inductor matching network, and it was AM and CW mode. I ended up selling it at a hamfest several years back for 40 dollars. A nice piece.

Pete

I will look up the spec sheets on the 2N5883. I have thought about just building a small 10 watt RF PA, using modern components and putting it in the set, leaving the orginal pa in it, and maybe some day getting replacement parts. So far, from the really bad copy of a schematic, and with the finals and driver shorted, cannot tell if they are npn or pnp.

Thanks for the information

joe

Hello and thanks for reading.
I bought a R-2001D on eBay and am just getting my feet wet on using all the functions.
Everything seems to be working, but I am wondering about the RF Generate function. It seems to be low on maximum output - and one line on the display shows DIST/SINAD INPUT TOO LOW instead of giving the SINAD reading.
Is this a normal reading? If not, is it correctable by an adjustment or what module needs ti be repaird or replaced?
Thanks for any info you can pass on to me.
Larry McGee

Larry, I am not familiar with the 2001D, but have used one many years ago. I am somewhat confused by your problem description, above. Unless I am misunderstanding you, you are complaining about low RF output?... while at the same time complaining about a display line saying, " DIST/SINAD INPUT TOO LOW " That's two problems. I can't suggest anything about the first, but what are you hooking the DIST/SINAD input up to when getting the "too low" reading? It should be a receiver speaker while you are generating a 1000Hz modulated tone at 3KHz deviation. Sorry if not necessary, but you DO know how to use the SINAD meter on that instrument, right?

Ed K7AAT

Hello and thanks for the read.
I have just received a working Collins 51S-1 and I would like to buy 2
missing knobs. The MEGACYCLES knob and the REJECTION TUNING knob. If you
have one or both of these knobs that you would part with, please reply to me
direct.
Thanks - Larry McGee

Hello All

We have a propagation issue that is confusing us. We have two 868MHz modules on test, each capable of 500mW transmission.

We are testing to find the range of communication. We are testing them as follows. One remains in our office while the other is taken to the street outside. we are communicating charecter strings such as "Im at the lamp post number 1" etc. There is somebody at each end sending text strings in a continuous conversation. There is no protocol, error checking or error recovery.

What we have repetadly found is that the radio in the office can receive long after the radio in the street has stopped receiving. (The person with the radio in the street is moving away from the office.)

The radios are the same and the power supplies to the radios are the same. Indeed switching the radios gives the same effect.

The propagation paths between the two radios are the same in terms of distance. However the radio signal transmitted from the office travels through walls first before then traveling through open space. Its the opposite for the radio in the street, firstly traveling through space and then through the walls in the office.

We did think we had identified an interfeering source in one direction (when moving away from the office) so we started moving in the opposite direction. We found exactly the same effect.

Are we getting interfeerance from GSM, ISM or Paging?

As far as GSM bands go in Europe 890=96915 MHz OR 1710=961785 MHz So these shouldnt be our problem.

ISM is where we intend to operate and the greatest band occupancy should be 10%. So we should get communication even though we would get some interfeerance.

Paging - well this has very much gone out of fashion in Europe. But even if it was the cause then wouldnt it be intermittant communication. We have a constant problem.

Can anyone shed light on this phenomonon? Is it an issue of wireless propagation that Im not familiar with or is it Interfeerance?

Best regards, and thanks for any input.

Denis

You may experience receiver desensitization from a strong out-of-band

interferer which is not penetrating well into your office and hence not
interferring there.

Pere

Hi Guys

Thanks for your input on this.

The idea of height being a problem is interesting. The radio in the
office is on the 1st floor (i.e above the ground by one floor).

If the antenna were at the same height would the problem go away?

We will test and see

higher antennas = longer range. Thats your issue.
Also lack of error correction, poor antenna pattern to meet the low

power regulations, and a less then robust protocol, ie your probably using some form of on/off modulation where the receiver does not have a continious wave signal to locl on and track. Try sending a preamble character that is 10101010 a few times, assuming your receiver is sophisticated enough to use AGC. This sets the DC level in the discriminator more accurately and reduces errors.

your using a radio with intentionally designed in limited range to allow reuse of the frquency.

Steve

What we have repetadly found is that the radio in the office can receive long after the radio in the street has stopped receiving. (The person with the radio in the street is moving away from the office.)

The radios are the same and the power supplies to the radios are the same. Indeed switching the radios gives the same effect.

Is your office in a concrete building? Or one with any steel reinforcement or steel or aluminum studs? If so, it could well be that there is a standing wave issue, so that a portion of your transmitted signal is being reflected back, and so not making it to the receiver. This would not necessarily affect the reception on the radio in the office from the outside radio.

The radio outside is likely being desensitized by some other signal.

I see you have other responses. One test that would establish that is
environmental (adjacent signal, receiver desense, etc), if BOTH units
could be moved to a relative RF free environment such as a rural setting
and then test the range.

If this eliminates the problem, then its probably time to break out a
spectrum analyzer and take a look at what is around your operating
frequency.

Andy

It's because the paths are not the same. Think of a silvered mirror. It can transmit light much easier in one direction than the other. Take both outside and see if it has the same problem. (extremely doubtful because the path's is virtually identical)

Did you design the receive software?
Or did buy the receiver "off the shelve"?

Perhaps there is a problem
with the receivers and how they are
receiving the data.

Did you design the receive software?
Or did buy the receiver "off the shelve"?

Perhaps there is a problem
with the receivers and how they are
receiving the data.

um, did you read his message? He said that it was independent of the
receiver because they exchanged them and the same problem. i.e., it helps to
read the original post.

>What we have repetadly found is that the radio in the office can receive long after the radio in the street has stopped receiving. (The person with the radio in the street is moving away from the office.)

You don't say if you are using the same antenna on both ends, but the environment is very different at each end. Consider that Transmitting is about putting signal into an area, while receiving is about capturing the signals in near field of the antenna, then discerning the intellegence. You would have to analyze the output to be sure, but it may be localized reflections, shading or noise at the street level. Because of this it is so difficult to quantify range. There is equipment and software specifically designed to do what you are trying to do but it is expensive. The result is highly detailed signal strength graphic output overlaid on 3d mapping for each fixed site at various frequencies. Most commercial antenna sites have gone to great expense to generate those maps in order to show what their tower does because it is very different for each location.

Is the moving station manually portable or is it mounted on a vehicle?

If the moving operator is bored and continuously talks on a GSM phone
or if the (vehicle) generates some other kind of interference, this
would reduce the SNR at the moving station.

Does the transmitter have some kind of SWR protection ?

If the Tx antenna is close to the wall, it might detune the antenna,
increasing the SWR and the SWR protection drops the transmitter power.

It's not so much that it won't RUN the gear, the gear simply won't be very usable.

The output from these type of inverters is a very strange waveform, a sort of three step square wave with a ring at each step. And all that noise shows up in your receiver AND in your transmitter. The filtering in the rig is just not designed to deal with the complex, harmonic rich waveform at the output of the inverter. I've even tried running the output through an isolation transformer, but it did no good at all. You may be able to make it look somewhat like a sine wave if you could find a proper transformer to make a tuned tank at 50 Hz, but no telling what voltage you would be getting out of it. The voltage on my 300 watt 120V/60Hz inverter is 380V peak to peak (190V peak) with so much garbage in it that my frequency counter can't even SEE the 60 Hz component.

That radio will run directly on 12 VDC;  why the inverter?

That's nuts.  12 VDC to 240 VAC back to 12 VDC for a laptop?  Surely
there's a more elegant (in its simplicity) solution.

Your best bet would be to go to a nearly defunct Mot radio shop. If they hadn't thrown them away already.

They were never useful because it required a connection to the R2001 to display the result and it was always easier to take a Bird out to the antenna rather than the whole thing. As I got older and radios got lighter, I began to take the lighter equipment to the heavier equipment for service. If you are doing an Bench ATE setup, good luck. The internal load should be quite capable of short tests up to the limit of calibration.

Probably because the radio likes to see 13.8 not 12.3 v. Big problem when you do portable OPs. A lot of the laptops need 17-19v too.

There are inverters out there clean enough for that, designed to convert 10-whatever volts to 13.8 regulated for $600 on up.   Some that will take care of the battery charging and automatic battery revert too.

The biggest problem to look out for is ground loops. You could easily wind up with the Battery negative at ground potential along with antenna and neutral and have some low voltage component or personnel wind up DEAD with much anguish left to the survivors.

IF you have designed around that to keep from blowing things up in the heat of the contest don't expect the 300 watt supply to be able to hack it. If it doesn't trip right off, you might be OK. But then you still might have noise and you will have to keep your batteries up some how and if someone plugs something in you didn't plan for then there's that Death problem again.

Would anybody who owns Eico model 710 GDO be willing to supply coil
data (diameter, length, No. of turns, wire diameter) so that I could
duplicate the coils? I bought the coil-less 710 at the fleamarket and
cannot find the coil set. I am mainly interested in the 2.9-7,5 and
7.5-18 MHz ranges. Or maybe a close-up photo with a ruler laying next
to the coils would be enough.
73, Rich OK8RF

Anyone know why that comment "not to hook up a battery"?
Perhaps because to re-charge a nominal 12 volt battery at say 2.3
volts (max) per cell it requires 6 x 2.3 =3D 13.8 volts. Or even a
```

little higher; that's why military equipment was/is rated as '14 volts' (or, typically aircraft, 28 volts).

The coils are bound to have so many turns that they will be hard to count, unless someone actually unwound them.

Open it up, see if you can figure the capacitance of the variable capacitor (or maybe there's a schematic somewhere that provides that information?), and then use the equations to figure out the needed inductance and then the number of turns to make that value of inductance. Then you can use any size coil form, just so long as you can rig it to fit whatever the GDO is using for the coils to plug into. Wind some extra turns, and then remove them if necessary (since it's easier to remove than add turns).

It won't be exact, but any GDO dial is fairly vague. The inherent
capacitance of the coil will come into play, so you can decide whether
it's best to have the GDO dial match at the high end or the low end.

Thirty years ago there was an article in "73" about revamping a GDO,
I think he solid-stated it but can't remember, but he didn't have a
coil set either and described the process he went through to give
it a set of coils. I think it was radical surgery though, I seem
to recall that he even changed the jacks used for the coils. He
took the easy way out, providing a jack to feed a frequency counter
so the original dial was relatively unimportant.

So then, start out with the highest frequency coil--this one you should
be able to count the turns on.

Then, look at then next, wind it, test it, and adjust turns so that in
conforms to the expected frequency coverage of the "next band."

Then, sit down with your calculator and "predict" the next ... adjust
your calculations and predict/compute the next ... etc.--repeat as
necessary ...

Logic ... it pays off in the long run, is usable across all disciplines ...

Yech, tubes. I have several Heathkit grid dip meters, but no Eico.

This may help:
<http://www.qsl.net/n4xy/GDO_EICO.html>
The photo shows one coil, which should give you an idea as to the general size and construction of the coil.

The photo of the Eico 710-A looks very much like one of my Heathkits (buried somewhere). Do you have a 710 or a 710-A. There's a huge difference.

Others have suggested cut-n-try which is probably good enough. As long as the coil looks roughly like the original, it should work.

However, if you wanna do the math, look at the schematic and figure out the minimum and maximum capacitance on the variable tuning capacitor. Be sure to include any trimmers or padding capacitors in the tuned circuit. You know the lowest and highest frequencies from the dial. Drag out your abacus and plug the numbers into the usual LC resonant frequency equation. Solve for a value of L that will be roughly the same at both the high and low ends of the dial. You probably won't hit the exact value, but it should be close. Lots of online calculators for the inductance of solenoid wound coils. No need for an LRC meter as you can just plug it into the grid dip meter and count the frequency.

More photos.
<http://reviews.ebay.com/Eico-710-Grid-Dip-Meter-Coil-Set-protection-packing_W0QQugidZ10000000001863194?ssPageName=BUYGD:CAT:-1:SEARCH:5>
Oh-oh. My Heathkit coils do not have ferrite or iron slugs. The Eico
710 coils apparently do. The coil on the left is obviously broken.

Free manual for the Eico 710:
<http://bama.edebris.com/manuals/eico/710/>
I'm too lazy to find a DejaVu decompressor, but I expect there are
some instructions and diagrams of the coils in the manual.

Yeah, working as a software engineer and finding I get the most money from convincing those "with money" that I am worth "some of their money" has made me aware of the value of reverse engineering--whether software or hardware--it works!

But, if you have built enough "old box tube xmitters", you can almost guess the dia./turns/and-caps <wink> Heck, bet I could come up with a circuit using the same coils, using a fet, and saving the cost of the filament power! Indeed, if the tube uses an octal socket, in his current

GDO, why not replace the tube with a fet(s)?

The very first think I did when starting a new product, was to do a "survey" of the competitions products. If possible, some were purchased, dissected, reverse engineered, and on one occasion, cloned. No need to reinvent the wheel when the competition has done it for you.

>But, if you have built enough "old box tube xmitters", you can almost
>guess the dia./turns/and-caps <wink> Heck, bet I could come up with a
>circuit using the same coils, using a fet, and saving the cost of the

>GDO, why not replace the tube with a fet(s)?

Because the typical FET as a much higher transconductance (typically about 30 millisiemens versus 5 millisiemens) and a much wider frequency response, that you'll probably spend considerable time stabilizing the oscillator. It's not easy to build a tunable oscillator that operates over such a wide frequency range. Also, the grid and gate currents are quite different. It can be done because there are FET grid dip oscillators available. However, if you compare schematics, they are sufficiently different to require a rebuild.

It's also criminal sacrilege to despoil such a vintage boat anchor.

> It has been stated elsewhere in documentation not to hook a battery on the
> output for backup.- Hide quoted text -
>

It is potentially hazardous to float a battery on just any power supply output. Several issues can and DO arise with ALL power supplies.

1. May interfere with regulation.
2. May exceed the design limits for overvoltage protection circuits.
3. May exceed the design limits for overcurrent protection circuits.
4. May cause damage to the power supply or excessive current drain on the battery system when the power supply is not energized.
5. Voltage may not be set for proper charge/float operation resulting in premature failure of battery.
6. Other issues may arise from the modular nature of a complex system that can be too easily changed or modified without proper consideration, I.E. simply by hooking up another piece of gear, adding a wire or even adding a fuse holder that isn't designed to be used in an explosive and corrosive environment.
7. Battery float issues not considered or investigated in design, prototype, product development and marketing phases.
Or fully considered in corporate risk management and policy development, I.E. it is much safer and simpler to just say no rather than have to deal with explaining how to do it.

In order to float a battery on a supply, you need to either buy a supply designed for it or you need to redesign what you use.

There are also other serious potential hazards when dealing with batteries that need to be addressed.

1. Fire hazard
2. Hazardous Gas and Vapor handling, including burning insulation.
3. Acid containment issues
4. Explosion hazard
5. Mandatory skillful regular maintenance in order to minimize and avert disaster as well as maximize life expectancy.

As I stated, mine has been modified (redesigned) for battery float operation. To do this, you need years of training, experience and the ability to project that knowledge into successful practice. If you have an ongoing professional need for this please get in touch with me at:
http://infotech.awardspace.com/

Otherwise, DO NOT PROCEED! Because of various risks to Life,
Health and property of yourself AND OTHERS!

Jeff, thanks very much for your suggestions and links. I have actually
already downloaded BAMA manual (Dejavu plugin works great on IrfanView
4.20, saves as pdf) and I will get to work calculating the approximate
inductances. The variable C is the only component they don't show the
value for, but I'll take a guess, wind a coil and listen for the
signal. Then with some trial and error I can probably come up with a
couple of coils for the ranges I am interested in. I know the scale
won't be accurate, but in this day of digital readouts it's not
important.

I am fascinated with the number of GDO's shown on N4XY's site - I
remember seeing just Heath, Eico and an old Mullen.

Thanks agn
Rich OK8RF

> It won't be exact, but any GDO dial is fairly vague. =A0The inherent capacitance of the coil will come into play, so you can decide whether it's best to have the GDO dial match at the high end or the low end.
>
> Thirty years ago there was an article in "73" about revamping a GDO, I think he solid-stated it but can't remember, but he didn't have a coil set either and described the process he went through to give it a set of coils. =A0I think it was radical surgery though, I seem to recall that he even changed the jacks used for the coils. =A0He took the easy way out, providing a jack to feed a frequency counter so the original dial was relatively unimportant.
>
> Michael =A0VE2BVW

I think I have a pretty good idea from various pictures of Eico or other GDO's what the coils should look like. I want mainly to get the instrument operational on 80-20m ranges, so there won't be too many turns. I have the manual but there is no variable cap value - looking at it and comparing to standard BC band 365pF it can't be more than 50-80 pF per section. So as you say - calculate the inductance, wind a coil... etc. adjust the winding until I hit the dial on one end.

Sounds like a lot of work for the old clunker, but I have the time and
enjoy this kind of stuff...

A normal storage battery (automotive) that I use as a standby is 13.8 Volts as it is in the automobile. I also have a standby generator, but the battery is the primary backup till the Genset starts. Anyway I have the battery for a RCI Ranger 2950 which I use in the radio shack and another in the mobile. 13.8 is GREAT

Whatever primary voltage (115 or 230) makes no difference, just whatever the convertor requires.

Duh. I use Irfanview heavily, but have never bothered to download the
DejaVu plugin. Thanks.

>and I will get to work calculating the approximate

That will work as long as you don't accidentally land on a
sub-harmonic. Methinks a frequency counter might be more useful than
tuning around the bands looking for the signal.

If you have a capitance meter or bridge, it might be possible to measure the value of the tuning capacitor.

>Then with some trial and error I can probably come up with a
>couple of coils for the ranges I am interested in. I know the scale
>won't be accurate, but in this day of digital readouts it's not

Chuckle. A few months ago, I won a used HP something universal counter on eBay because I wanted the extra digits of resolution. However, that was for period and event counting, not frequency.

>I am fascinated with the number of GDO's shown on N4XY's site - I
>remember seeing just Heath, Eico and an old Mullen.

Search Google for "base dip oscillator" and "gate dip oscillator". There are a few designers that couldn't find the grid pin on the semiconductor devices. My Heathkit HD-1250 calls it a "solid-state dip meter".

I don't know if this will help, but the HD-1250 looks very much like the Eico (other than the tube versus the xistor). Here's a table of coil values for it assembled from various parts of the manual:

	MHZ	uH	
L1	1.6 - 3.4	171	red
L2	3.2 - 6.6	41.1	orn
L3	6.3 - 13	10.2	yel
L4	12.5 - 26	2.62	grn
L5	25 - 51	0.72	blu
L6	48 - 100	0.196	vio
L7	100 - 250	????	brn

As usual, no value on the tuning capacitor in the manual, but it can be calculated from the above data.

Are airplanes safe?  Yes but it depends on how you build them, maintain
them, fuel them, take-off and Land them.   Who flys them and how...   I know
this much about airplanes but I'm not a pilot.

Nixie tubes. Ah... nostalgia. I've got several boxes with Nixie tubes (HP5248M, HP5246L, and some home made junk). I think I paid more for the printed manuals than for the counters and downconverters. The usual problem with ancient hardware are the electrolytic cazapitors. If you have an ESR meter, test them to see if they have "dried out". If everything looks like it's working (display lights up and digits change when thrashing the buttons), then it might be the time base oscillator or dividers. Try an external time base oscillator in case the crystal has quit.

Photo of the counter at bottom of page:
<http://www.k5cm.com/k1ggiFMTMethod.htm>

General Radio morphed into GenRad and was bought by Teradyne. The test equipment division went to IET Labs:
<http://www.ietlabs.com/Genrad/index.html>
The have a few manuals online:
<http://www.ietlabs.com/pdf/Manuals/index.html>
but not the GR1192B. Send them email as I'm sure they have a printed copy in the archives that only needs to be scanned. Maybe just the schematic and block diagram.

I make it a habit of buying or downloading the manual for literally every piece of test equipment that I use. I find myself repairing the old equipment all too often:
<http://802.11junk.com/jeffl/pics/home/slides/lab.html>
Note: It's a lab, not a museum.

>Just got mail from K7ITM offering to supply the Eico coil info. Thanks

Cool. One question. Is the frequency range of the Eico the same as the Heathkit ranges that I listed? I'm curious.

Power supply was also my first thought, but Nixies light up and if I
try hard, I  can change some digits. Time base fault sounds like a
good bet. Thanks for the hint.

I don't think 20-30 year old HP's are at all museum pieces - they are
```

still in their prime.

> Cool. =A0One question. =A0Is the frequency range of the Eico the same as
> the Heathkit ranges that I listed? =A0I'm curious.

Eico 710 has 8 coils starting below AM BC band:
L1 0.4 - 0.7
L2 0.7-1.38
L3 1.38-2.9
L3 2.9-7.5
L4 7.5-18
L5 18-42
L6 42-100
L7 100-250

It's probably a simple divide by 10 divider chain. Should be easy to troubleshoot. Since it probably doesn't work on any range, it's probably somewhere between the clock oscillator and the first digit counter. This should be easy (famous last words).

Incidentally, I bought an HP5334A counter on eBay. When plugged in, it displayed an error messages that indicated the clock section was dead. I got a really good price on it, so I decided it was better to fix than to return. I didn't have a schematic yet, and none could be found to download. After replacing the clock oscillator and the hex inverter that was acting as an oscillator, I eventually discovered that the internal/external toggle switch was open. Sounds simple but this trivial troubleshooting exercise took about a week.
Moral #1: If it moves, it breaks (especially on old equipment).
Moral #2: Simple problems take forever. Complex problems are easy.
Moral #3: That which is most obviously working, beyond any need of checking, it usually the problem.

>I did get to ietlabs site in my first searches. Never thought of
>mailing them for a scan, though. I'll give them a try.

It will probably cost you some money, but methinks is worth the effort.

I'm sitting on a fairly complete collection of Intech marine radio service manuals from the 1970's. One of my customers has a Canon Imagerunner 5000 copier and scanner combination that does a totally impressive job of scanning manuals (hopper feed, de-collating, scan to PDF, etc). At about 2-3 hours per manual, this is a major project.

>> old equipment all too often:

>> Note: �It's a lab, not a museum.
>
>I don't think 20-30 year old HP's are at all museum pieces - they are
>still in their prime.

That depends on what you're doing. For tinkering and experimentation,
it's good enough. For design projects and consulting, it's
inefficient, insufficient in many ways, and barely adequate. For
example, using a digital camera to obtain a spectrum analyzer image is
rather clumsy with my cardboard hood.

>> Cool. �One question. �Is the frequency range of the Eico the same as
>> the Heathkit ranges that I listed? �I'm curious.
>
>Eico 710 has 8 coils starting below AM BC band:
>L1 0.4 - 0.7
>L2 0.7-1.38
>L3 1.38-2.9
>L3 2.9-7.5
>L4 7.5-18
>L5 18-42
>L6 42-100
>L7 100-250

Thanks. Not even close to the Heathkit. So much for that theory.

Pick up some crisco on your way over tonight, KC8QJP needs a good
slathering on her hind quarters.

She's also getting ready to start her tax return posts again like she does
every year. You remember those..

http://tinyurl.com/46teqq

She says she wants to add some pics of her and me to them this year.

Hi everybody,
just a line to inform that there is a great yahoogroup devoted to the
new Yaesu VX-8R.. you can find it at:

http://groups.yahoo.com/group/VX_8R/

Please feel free to join !
73,

Mike

Hello and thanks for the read.
I believe I am going to need a replacement CRT for my Motorola R-2001C
Service Monitor.
I have a weak trace that I can focus. I am going to check the voltages but
don't have much hope that that will be the problem.
Does anyone have a lead on where I might find a good replcement CRT if I
need it?

Gary-

This is one of those things you can try and see if it will work!

Instead of estimating the power your equipment needs, you need to find a
way measure it. I measured power consumed of an HF rig putting out 100
Watts CW, and found the actual AC consumption was about 350 Watts.

JB-

As far as needing 13.8 Volts instead of 12.3, there is a product on the
market designed just for that problem. One version was published in QST
several years ago, and may be currently marketed by the original author.
Another variation is the MFJ-4416.

One of the functions that you can enable with this unit is a Tx audio
moniter. Check out your manual. There is nothing wrong with the radio. Read
the manual.

> Am experiencing RF on the chassis of the radio when transmit. Have good ground system, clean power supply, resonant antenna w/ low SWR. When I touch the antenna of my RF Field Strength meter to any metal on the radio, wattmeter or power supply it pins the needle. Opened radio, looked at ant output connectors, could find no problems or bad solder joints. Installed 1:1 choke balun on coax at radio, no effect on problem. Hear myself talking in the headset and when transmitting it triggers a motion detector light mounted outside and above the ham shack. Same effect when using a dummy load. Defect inside the radio, anyone experienced this?
>
> 73, Steve

Thanks to everyone who responded. The problem of hearing myself when transmitting is a problem in the radio as I suspected. The motion light issue is of no concern, they are inherently prone to RF setting them off. This one is only about 5' above the radio on the outside wall. My main question was directed to if anyone had this type problem with their TS-570.

73, Steve

You might try rejuvenating it and reset bias. I have extended the life of
CRTs between 3-15 years on nearly all that way (not much use these days).
It can only improve the situation unless the phosphor is burned. .

They were never much good out in the sun anyway though. It would really be
interesting to see if an LCD monitor module might fit in it's place.

URL: http://www.faqs.org/faqs/radio/personal-intro/

Changes followed by "|".

The rec.radio.info newsgroup, first established in 1993, has been recently revived by an active moderation team. We are currently seeking suitable information, FAQ, and bulletin articles from the entire rec.radio.* newsgroup hierarchy for simultaneous cross-posting to our newsgroup.

We are seeking a replacement maintainer for the following information bulletin formerly posted to rec.radio.amateur.* (and currently archived at http://www.faqs.org/faqs/radio/personal-intro/):

radio/personal-intro
Subject: Guide to the rec.radio Newsgroups
Maintainer: jeffreyh@Hawaii.Edu (Jeffrey Herman)
Last Posted: 9 Nov 2001 06:18:17 GMT
Posting-Frequency: 15th of each month

We are willing to provide any technical support necessary to get this article updated and automatically posted again at a regular interval. This would include establishing contact with the original maintainer for any necessary permissions. We would prefer to seek a new, dedicated maintainer at this time, rather than start auto-posting the original article ourselves.

For more information about our newsgroup, see:

http://www.panix.com/~rram/usenet/rri/index.html

Please direct any comments, questions, or criticisms to rec-radio-info-request@panix.com.

I have an Emotator 103 LB that quick showing the direction the rotor is turned.

I need a control box or even the parts manual to maybe fix mine.

If you have manual/parts list or a working unit that you would like to sell please contact me at w3ml@arrl.net

John

I have four analog meter movements that should fit the R-390 and
R-391
series of receivers.  Check it out!

Am experiencing RF on the chassis of the radio when transmit. Have
good ground system, clean power supply, resonant antenna w/ low SWR.
When I touch the antenna of my RF Field Strength meter to any metal on
the radio, wattmeter or power supply it pins the needle. Opened
radio, looked at ant output connectors, could find no problems or bad

solder joints. Installed 1:1 choke balun on coax at radio, no effect on problem. Hear myself talking in the headset and when transmitting it triggers a motion detector light mounted outside and above the ham shack. Same effect when using a dummy load. Defect inside the radio, anyone experienced this?

73, Steve

Make sure the dummy load and coax feeding it are good.

Then check the connections inside the radio. Look for loose or corroded connections. Ground, coax, connectors and around the TX section. If questionable, resolder or clean and reclamp them. But it has to work into the dummy load before you need to worry about the antenna. Good Luck.

I don't believe your test is indicative of RF on the outside of your
feedline. Are you experiencing distortion on your SSB signal? Does the VSWR
change on your antenna system if you add in a length of coax? I think that
whatever you are touching your FSM to is simply acting like a longer
antenna. As for the motion detector- probably picking up RF directly from
the antenna- those things have no shielding or RF immunity.

Put the choke balun at the feed point.
Don't touch the FSM antenna to any metal. You might blow the diode.
Is there low swr on dummy load?
Is coax and dummy load double shielded?
Motion detector probably needs to be bypassed.
Check for ground faults in the house wiring.

What kind of antenna? Describe 'good ground'

If the transmitter is feeding RF via a shielded coax,into a shielded
50 ohm dummy load,and VSWR is low, I don`t think you have a problem..
Field strength as measured by portable meter,  short antenna ,tuned
circuit,diode det. analog 50ua. meter ..I would expect to see RF all
over the shack..All this may be normal.. Harold W4PQW

Steve-

I suspect you have a cable with an open or resistive shield connection.
If so, it would be a cable that is common to both your antenna and the
dummy load.

Do you have one of the dummy loads that screws directly onto the SO-239
connector on the rig? Radio Shack used to sell one that was good for 10
or 15 Watts, but would withstand 100 Watts for a few seconds. If the
problem with the motion detector is present with such a
directly-connected dummy load, then look inside the rig. If not, then
look outside.

I have four analog meter movements that should fit the R-390 and
R-391
series of receivers.  Check it out!

Actually, I run a similar amp on 10-40m in my pickup, what makes the listing a violation? If I ever decide to get rid of it, I can't sell it on ebay?

Regards,
JS

Wow. I am certainly no attorney, but ebay seems "ripe for picking on
that one."

I mean, if they are illegally preventing some from participating in the
God-given-right-of-capitalism, it seems like a sin; doesn't it? LOL

poetencaily but they seem to have decided the fcc is a bigger threat
to te whole system, and I assume their lawyers have weighed that

it offends certain folks and ebay can't tell legal amps so the
whinners win

maybe you should inform ebay which ones are illegal and be a good guy to the
ham community!

Since the "legal" ones either have a tuned circuit with takes the output
to ground and burns up the finals if you attempt to hit 11 meters, or a
choke which cuts drive at 11 meter freqs, or both ... I don't think they
can tell at ebay!

Most truckers actually use ham equip. (or, "legal equipment"), they just
have cut out the "protections."

So in the end, what good is all of it?

And, every ham I know, knows that if you want top dollar for ancient
equipment he/she is done with--sell it to a trucker! LOL

I mean, it is sort of like the "copy protection" on movies--it doesn't work, teenagers worldwide copy and burn movies with free software--but the industry claims it works! Go figure ...

Regards,
JS

Where do they get "1000 Watt Amp"?

"Power Output (RMS) 350 Watts
Power Output (PEP) 650 Watts
Driven Power (RMS) 450 Watts
Driven Power (PEP) 1000 Watts"

Sounds more like an attenuator to me.

Yeah, screwy specs. Although I have never used this particular amp, it
probably hits full out at ~40w-80w rms. That is what the small box amp
they usually sell is for (most will have them when selling amps this

big), takes 4w to ~80w then you drive the amp ...

I have an ancient CMI (has a Palo Alto/Menlo Park address and a couple of hams/engineers there built and sold them) which does a solid 80m-10m, 500w rms at 40w rms drive (I drive it with ~25w), pep follows the same linear curve ... it is marked "Amateur Amplifier" on the front panel and was purchased at an electronics surplus store in Livermore, CA in the 80's. I got it for next to nothing thinking I would have to replace one or more of the power transistors--it was only a diode in the thermal protection circuit which had failed ...

It seems quite legal to me, even though I know they were marketed to CB'ers in the 70's and enjoyed widespread "diesel usage." On a scope it puts out a beautiful signal on all the bands I have used/measured, however, as with any high power amp, the drive signal needs to be clean to excellent tolerances. However, I would entertain arguments on how it is "illegal."

I am guessing, but I guess it is the fact it spans 80m to ~40 Mhz which makes it illegal? However, when it was sold, I don't believe it was illegal to allow amps to cover the 10m and 11m bands ... but would have to research that now to make sure ...

Nowadays, I don't believe you can even buy an amp which covers the 10m band ... you must first "modify" the amp ... someone more knowledgeable on the fine points of the rules/regs would know for sure ...

My antenna on the pickup has been though h*ll, bent, dented, etc. (I have forgotten to fold it down on low overhangs), at one time the amp was operating into a 4+:1 SWR by the time I noticed (smelled something getting hot, grabbed the unit behind the seat and burnt my hand!) It is one tough amp! I run a shortened 1/2 wave with a gamma match on 40m and a simple 10m SS whip, switchable ...

Regards,
JS

Exactly, if I would strike my neighbor with a shovel, it would become an
"illegal weapon"; I would guess.

It does make you wonder who he thinks he is fooling with these "tips"
he sends out on great buys on ebay.

Oh, wait a minute, I said the word "thinks".  That was my mistake.

Thanks to everyone who responded.  The problem of hearing myself when
transmitting is a problem in the radio as I suspected.  The motion
light issue is of no concern, they are inherently prone to RF setting
them off.  This one is only about 5' above the radio on the outside
wall.  My main question was directed to if anyone had this type
problem with their TS-570.

73, Steve

Motion lights can create a lot of QRN.

Test Preparation Software

Pass your US FCC ham radio license test with ease. Our test preparation software serves as a training aid to help amateurs and prospective amateurs pass the
VEC's administered test. When you can consistently pass the test given by our test
preparation software, you will almost certainly pass an actual test.

Our ham radio license test preparation software uses the latest officially released VEC's approved question pools. The program breaks the test into different sub-element. Integrated into the software are illustrations and Part 97 rules pertaining to the current question. The program tracks the progress of the tests taken. Once you have mastered each sub-element you are ready for the official test.

Visit our web site at http://www.hamradiolicense.net for more information

Here are a bunch of parts for sale. Prices do not include shipping. I will ship overseas.

Groth TC-2 Turns Counter.........$75 plus shipping
http://members.cox.net/radiodx3/grothtc2.JPG
http://members.cox.net/radiodx3/grothtc22.JPG

Monarch 50mm Vernier Dial...$18 plus shipping
50 mm version which is 2 inches in diameter couples to a standard 1/4 inch shaft.
http://members.cox.net/radiodx3/50mmJAvernier.JPG

EF Johnson Roller Inductor.........$40 plus shipping
The max inductance of this roller coil is approximately 13 uh and this should cover 3.5 to 30 MHz. This is in excellent condition. The dimensions of this coil are 3.5 inches long by 2.5 inches wide by 3 inches high.
http://members.cox.net/radiodx3/smallrollercoil.JPG

EF Johnson Roller Inductor.........$40 plus shipping
The max inductance of this roller coil is approximately 13 uh and this should cover 3.5 to 30 MHz. This is in excellent condition. The dimensions of this coil are 3.5 inches long by 2.5 inches wide by 3 inches high.

http://members.cox.net/radiodx3/efjrollercoil.JPG

National Radio "Velvet Vernier" Type AM Dial..........$25 plus shipping
Includes Insulated Coupling
http://members.cox.net/radiodx3/nat_amdial.JPG
http://members.cox.net/radiodx3/nat_amdial2.JPG

National Radio "Velvet Vernier" Type AM Dial..........$25 plus shipping
Includes Insulated Coupling
http://members.cox.net/radiodx3/nat_amdial3.JPG
http://members.cox.net/radiodx3/nat_amdial4.JPG

National Radio Velvet Vernier Dial & Insulated Coupling....$22 plus shipping
http://members.cox.net/radiodx3/velvet_vernier.JPG
http://members.cox.net/radiodx3/velvet_vernier2.JPG

Triplett RF Ammeter - 10 Amp Maximum....$25 plus shipping
http://members.cox.net/radiodx3/10a_sqrfammeter.JPG

Weston RF Ammeter - 10 Amp Maximum....$25 plus shipping
http://members.cox.net/radiodx3/10a_rfammeter.JPG

Geared 3 Section Variable Capacitor ....$20 plus shipping
Came out of a Hallicrafters SX-71 receiver.Measures 35 pf max per section and 10 pf min. Tying the 3 sections together will give you a variable capacitor with a max capacitance of 105 pf. The dimensions are 5 inches long by 3 inches wide by 2 inches high. The shaft is a standard 0.25 inches. This would be a great loading capacitor in a homebrew VHF transmitter or in a tuning capacitor in a crystal radio.
http://members.cox.net/radiostuff9/big3seccap3.JPG

Cardwell 100 pf Variable Capacitor....$20 plus shipping
http://members.cox.net/radiodx3/cardwell_cap.JPG

Unknown 200 pf Variable Capacitor....$20 plus shipping
http://members.cox.net/radiodx3/200pfcap.JPG

Geared 3 Section Variable Capacitor...$20 plus shipping
Came out of a Hallicrafters SX-71 receiver. Measures 470 pf max per section and 10 pf min. Tying the 3 sections together will give you a variable capacitor with a max capacitance of 1470 pf. The dimensions are 7 inches long by 3.5 inches wide by 2 inches high. The shaft is a standard 0.25 inches. This would be a great loading capacitor in a homebrew transmitter or in a tuning capacitor in a crystal radio.
http://members.cox.net/radiostuff9/big3seccap.JPG

Lighted VU Meter ....$15 plus shipping
The manufacturer is unknown. This is a tested working meter. The dimensions are 3 inches by 3 inches. The body will fit a hole that is 2.75 inches in diameter. looks better than in photo.
http://members.cox.net/radiostuff9/vu_meterB.JPG

Lighted VU Meter..........$20 plus shipping

The manufacturer is unknown. This is a tested working meter. Their is crack in the housing which can be seen in one of the photos. The dimensions are 2.25 inches by 2.25 inches. The body will fit a hole that is 2.25 inches in diameter.
http://members.cox.net/radiostuff9/vu_meter.JPG

100 kHz Crystal for Receiver Crystal Calibrator...$14 plus shipping
This is a working crystal removed from a Hallicrafters receiver that was parted out.
http://members.cox.net/radiostuff9/100khzxtal.JPG

Have a new FT-60R and despite repeated readings of the manual, I am stumped on a few issues.

First, Programmable (Band Limit) Memory Scan. On page 40, item 2 in the manual it talks about storing the upper and lower limit of the scan you want to program. It says using the methods learned earlier (?) store the lower freq in L01 and the upper in U01. I cannot figure out how to get to L01 and U01 to store these limits.

Can anyone help?

Thanks and 73
Paul

I have no idea, but obviously there is something explained earlier in the manual about storing frequencies. So if the unit has some memories for certain frequencies, find that section and read it.

I'd assume you have to tune to the desired frequency, and then press
a button to store it.

Don't know that particular model but the typical routine is to select the
channel position in memory mode, then change to VFO mode and enter in the
frequency, then Func+mem, mem(or select memory position and hit mem). There
are variations of this with menu structures.

I prefer to use the software with large frequency lists.

Go to page 27-29  go to memory mode and enter 1001 F/W.  Then go to VFO mode
and enter in your lower frequency limit then press F/W for 1 second and you
should see the flashing number.  Use the channel knob to make sure you are
on the one you want and press F/W again.  Pretty much the same as I stated
above, but they are using different keys.  It looks like the L and U
positions are at the start of each bank below channel 1, 11, etc.

Hello and thanks for the read.
I am looking to purchase the Motorola watt meter adaptor as used with the
r-2001x type service monitor. Should be part number RTL-4055A.
If you have one that you would sell for a reasonable price, please let me
hear from you.
If I find the adaptor, I could be interested in some of the ST-12xx elements
as well.
Larry

Hi all, i purchased a 12vdc to 240vac inverter for using my laptop. it's a 300 watt model fromm Jaycar.
I asked the person running the shop if i could run my 100w IC725 from it. NO WAY was the reply.

I was thinking of running the DSE D-3800 power supply from it when out on contests and running the laptop and ssb hf rig from it.
I just wanted to know if it was capable of handling that (which i presumed it would be) as the lap takes about 60w maybe and the transmitter 100w at times.

Anyway, if someone can please explain why a 300w inverter won't run 160w of gear i will be very happy.

Thanks

Gary

1. Ten-Tec Argonaut 509 QRP Tranceiver, Excellent Condition, Plus Extras

This was the very first radio I ever owned. When I got my license way back in '75 I was still in junior high (middle school now I think) so my dad and I went to the only local place that sold ham gear and he got me the argonaut. At the time I didn't know that QRP was not the best idea for a new operator. I have only used this radio a little over the years as I am not much of a talker. It has been sitting in a box for the last few year so I thought I would pass it along to someone that will give it more to do. It is in excellent shape and everything worked last time I used it. I don't have an antenna anymore so I can't test it very well now. Included is the matching power supply and a black Ten-Tec automatic paddle keyer I got at the same time. I no longer have the box but I do have the original manual.

2. OWI Movit WAO II MV-961 / MV 981 K Programmable, Build it Yourself Robot Kit with PC interface

I got this as a gift a few years ago and never actually did anything with it. It is a very nice little robot with either direct programming via its keypad or programming from a PC via the interface kit. This is a full kit version which means you have to solder the electronics as well as assembling the mechanical parts. This would be a great parent and child project or for anyone interested in robots and how they work. Below is from the company that makes the kit. This is the description of the MV-961 which is already assembled. The unit for sale is the MV-981 K which is identical except you build it from parts including soldering the printed circuit board.

WAO II is an intelligent robot with a four-bit micro-computer. Through its 26 keys, you can input a motion program. There are 8 movement command keys, 4 program keys, and 3 demonstration keys. WAO II also has a pen mechanism in the middle of its body which allows it to draw simple letters and designs. Assmebled Printed Circuit Board Movement: Programmable through keyboard or personal computer by utilizing an optional interface (sold separately). "AA" x 3 each, 9V x 1 each (not included).

3. Brand New Linksys WRT310N N Ultra RangePlus Wireless N Gigabit Router

I bought this just before the wrt610n came out. I couldn't decide if I wanted to keep this or get the 610. By the time I decided my return period was up so now I have a brand new in the box wrt310n for sale. I never did more than take it out for the pictures below. My indecision will be you gain.

4. TomTom 520 720 GO Flex Car Quick Mount

I got this to use with my TomTom 720GO but I ended up going another way due to the place I found to mount it in my car. It is very nice mount and can be wired into the car's electrical system or used with the cigarette lighter plug. It makes it quick and easy to remove the TomTom when leaving the car, no plugs to contend with.

For pictures, more information or to place a bid go to

I was going to build this antenna and had a couple quick questions
about it.  DOes the coil connect at the tap point and one apex of the
triangle, or both triangles and the tap point.  And the smaller coil
that connects the coax goes to the center conductor and then the
shield?

I made a balun for this antenna according to the manufactures
instructions and I still have high swr. HELP. I do get good signal
reports though. The ladder line is only verticle for almost 12ft and
then drapes off the roof. Best way it could be installed right now.
Using a kenwood ts440s with auto tuner. No luck on ten meter yet!!!

I have found that only a couple of bands can be tuned with the
built-in tuner. For the rest you will need an external tuner that can
handle SWR's greater than 3:1.

With the current sunspot cycle, you would be lucky to make a ten-meter
contact (other than locals) with a 6-element beam, let alone a G5RV.

Dick - W6CCD

I don't think much of the G5RV, but that is a personal opinion without ever
having one up. I do use an OCF antenna with all its problems. Mainly for
80 and 40 meters.

Ten meters has been opening up some and I have made a few contacts on it. I
am not much of a 10 meter operator. I do have a triband beam up and it is
much beter than the OCF for the bands it is cut for , but I have heard many
10 meter stations and beacons over the last month. I have even made a few 6
meter contacts out of the local area.

I did make a contact from N Ohio to Idaho with reptty good results
running around 35W on 40 meter the other night.  Thanks for the input
though!!!

Did you get your problem solved? A few questions here. Where is the balun
located, and what type is it?

Internal tuners tend to correct up to only  3:1 or so. There is a good
chance that you will still need an outboard tuner. Something like a MFJ 949
would probably do the. If you do use that, you can probably take the balun
of the radio end, (if that is where it is at) and run the ladder line
directly to the tuner.

The balun is at the feedpoint.  It is constructed as per mauf specs.
4" pvc with ten turns of the coax around it, secured with zip ties.

Here is a good article regarding feeding the G5RV. You will note in
it that Louis Varney (G5RV) in his later writings, did not recommend
the use of a balun. I have used the G5RV for many years without a
balun with fairly good success. Here is the article -
http://www.vk1od.net/G5RV/index.htm

I am just posting this review for anyone who has noise problems. I also posted it on eham.

The only reason I did not give this a five is because the level control and bypass control are tiny buttons. The level control is accomplished by holding down a tiny button and trying to count beeps. A very poor idea. It should have been a rotary switch.

Now, the noise reduction. It is very very good. This device adapts the amount of noise reduction to the amount of noise it receives. This makes listening to a group on say 75 a real pleasure. The signals I receive that are very good like 20 over hold my agc so that I am not receiving noise. This then stops the ANEM from effecting the signal. When a weak signal comes on, my noise starts to come up and I can hear the ANEM start to force down the noise. There is a slight distortion of the audio that does not affect readability.

The bottom line is that I can listen to a round table without listening to noise with the exception noted below.

This device is not fast enough to stop lightening crashes.

This device is good enough that in the four days I have had it now, I feel spoiled. I do not want to operate without it.

It was pricey, $200. But I feel it was worth it. And no, I have no financial interest in Gap or any other company. BTW Gap antennas suck.
This unit was purchased from w4rt.com

My call is W8EZI

Note: ANEM is the original name of this module.

Saw a previous posting where a user was helped with a different model than mine a couple of years ago.

I've got an Alliance U-110 Tenna Rotor and the schematics are missing for the in house controller. Four terminals, labeled 1-4, no idea how they connect with with the wires. I inherited a system already in use, and the wires which are in place are red, green, black and white. Any ideas about which goes to which terminal?

Sadly uneducated,
RebDaniel

The wire colors mean nothing.  If you can look at the rotator, then the same
number on the rotator goes to the same number on the house unit.

I usually use the colors of the resistor code when wiring up things, just
start with the lowest color wire and go up.
I doubt anyone else does this.

At least get a throw-away Hotmail or Yahoo account :O)

I liked your method of using the resistor color code when attaching colored
wires.  I'll have to keep that in mind.

I used to install U-100's many years ago (a side job while in college)
and remember if you use the included strain relief at the motor end
with a four wire flat cable, the four wires became 1, 2, 4, and 3
because of the way the screw terminals were laid out on the motor.
You, therefore, had to swap the 3rd and 4th wires on the control box.
I always wondered why they did it that way.  We had many repair calls
because an owner would disconnect the control box and then reconnect
it the obvious way... wrong.  Perhaps they fixed that problem on the
U-110.

Hello,
I would want to buy an Albrecht AE201 in good condition, AKA :
Eurocb pro 201
Alan AE201S
Eagle Spitfire 454
Intek SS-201
Magnum SSB-1010
Titan RPSY-201
Cherokee AH-100, etc...
If you have that at home and you want sell it...
Thanks in advance !

Pascal

Bonjour,
Je suis � la recherche d'un poste Albrecht AE201, connu �galement sous
les marques et mod�les suivants:
Eurocb pro 201
Alan AE201S
Eagle Spitfire 454
Intek SS-201 AM/FM/SSB
Magnum SSB-1010 AM/FM/SSB
Titan RPSY-201 AM/FM/SSB
Cherokee AH-100 AM/SSB, etc...
Si vous avez �a dans vos cartons, ou si vous connaissez quelqu'un...
Merci d'avance.

I have a Alliance U-110 Tenna Rotor that won't rotate when you turn the knob on the house control box. The control box just lights up and there's no pulsing of the rotor. I checked the wiring between the control box and the antenna rotor and it seems all correct. The only way that I can get it to work, is by pressing a tab under the control box that's over the number 1 & 2 screws. There's got to be a better way to operate this rotor. I'd picked another Alliance U-110 House Control Box at a garage sale and tried that one and came up with the same problem. Does anybody know what the problem might be? Is it easy to repair? Thank You in your help- Techcom.

The capacitor usually goes bad in the rotors.
When you press the tab , that is to line up the rotor with the control
indicator. I doubt the rotor is actually turning the antenna.

Hello all - I guess it is sacreligious to think that anyone would not repair
this xcvr., but I have to ask.
If anyone has a non-working Collins KWM-380 or HF-380 that you have given up
on, please let me know. I am specifically looking for a good trim ring that
goes around the face, maybe a case. Also, could use some of the optonal
boards for inside the xcvr.
If you have anything available, please let me know direct.
Thanks - Larry

Isn't that the sort of thing that Surplus Sales of Nebraska is so good
at? Tiny little parts with high prices, but at least you can get them.

Hi All

I recently moved to the US and have brought with me a SEC 1223 Switch
Mode Power Supply (spec is below). It is not marked up that it can run
using 120V but i tried it and it seems to be putting out about 13.2V
on my meter. I have not stress tested it with a radio connected on
transmit.

Any thoughts?

Regards

Andy

SEC-1223 SEC 23A 13.8V Switch Mode Power Supply
* Input 230V AC * Output 13.8V DC * Output current 23A continuous (25A peak) * Thermostatic Fan cooled * HF & VHF filtering *

The SEC-1223 switch mode power supply offers 23A of continuous current output and 25A peak. This is more than enough for any 100W transceiver. Designed with RF operation in mind, it is totally noise free and utterly stable. Lighter than an IC-706 and bout the same size, it will fit underneath for desktop operation. It will also fit in a brief case or flight bag.

There is a rack mount version that is internally selectable 120/220 Here's
a thread on the conversion:

I remember the first time I noticed an ad for the company, sometime
in the eighties but I don't know if they'd been running ads before.
"A new surplus place, I'll send for the catalog".  And then it comes,
and there are interesting things, but unlike the surplus catalogs
I'd come to know, the prices were all high.

So something that would be really neat to build with, like an IF
filter out of the KWM-380, had such a high price that virtually
all the alternatives were more appealing.  The only reason one
could pay that was if it was absolutely necessary, which would
mean you need one to replace the one in your Collins transceiver.

I haven't seen their catalog recently, but I wince every time I
see people suggest it for some mundane part like one of those
"365pf variable capacitors" so common in construction projects.
Those are so easy to get, even if you have to buy a radio at
a garage sale, there is no reason to pay a premium price.

Hi

Thanks for the advice. I would probably need to find a service
engineer to do this as meddling with the inner of switch mode power
supplies is beyond my comfort zone. I just wondered why it seemed to
work and if i could get away without further mods or if there was a
simple switch to flick like there was on my home pc power supply (if
only!).

Thanks for the link to advice.

Andy

Some of these newer supplies can auto switch between input voltage. The
nomenclature on the spec tage will say something like....

" 90~250v "

If it says that, it's a auto switching input

Hi

Thanks for the advice. I would probably need to find a service engineer to do this as meddling with the inner of switch mode power supplies is beyond my comfort zone. I just wondered why it seemed to work and if i could get away without further mods or if there was a simple switch to flick like there was on my home pc power supply (if only!).

Thanks for the link to advice.

Andy

Full schematic here:
http://www.n0ss.net/index_general.html

If you had a 120/240 switch, that is where it would go. It cuts off half of the full wave bridge to feed same voltage that would be available with 240 v.
Doing so will likely allow you to pull full current before regulation goes south. Might be iffy for your radio if you don't. Also the supply will run cooler if you do.

There is also an output voltage adjustment.

It has been stated elsewhere in documentation not to hook a battery on the output for backup.

Most of the 90-250V are "universal", not auto switching, as there is no
switching of the primary involved for any reasonable input voltage.
They rectify the incoming voltage, and the actual switcher that creates
the output voltage runs on that DC supply. This is the reason many
single rated (240V) switchers will run on 120V, though they don't
typically provide full current output unless they have really stout
input diodes... If you've a 250V single input rated switcher, (and no
obvious jumpers inside) it would be best to keep the output drain to
half of the rated current, unless you've been inside and can verify the
input diodes can handle the current.. (DAMHIKT) [wry smile]. Any

supply with jumpering inside to switch can typically use 120V with full output.

Good Luck

Having difficulties getting the TNC (KPC3+) to Connect to a Host.

Kantronics KPC3+
Alinco ALR-22 2M Rig
Serial Cable between PC and KPC3+ is fine and connection is fine
Cable between KPC3+ and Alinco has been verified pinned correct
Using Windows Hyperterminal

When I click Connect hostname, I see
--Red Transmit light on KPC3+
--Flashing on the Alinco (transmitting)
--My Yaesu Handi-Talkie hears a tone

--The host doesn't make a connection, though

When I key-up the Handi-Talkie, the Alinco doesn't respond

When I put the regular microphone back on the rig, it receives and transmits

I read somewhere that I have to set CD to Software (vs Internal) - no difference

I've done the full reset -- no difference

I've done the soft reset -- no difference

Abaud is 9600
Hbaud is 1200

I was able to follow the KPC3+ instructions where you open up the squelch and raise the volume until the green receive light comes on and then turn up squelch -- no difference

Question: Is there some setting I need to be making on either the Radio or TNC to tune it up?

Thanks in advance,

Paul (KI6USA)

--
Paul Garth

This paddle is in Like New condition and comes with black finger
paddles (not red), the Begali cord with the metal Begali 1/4" stereo
plug installed.

Just plug it in and start transmitting.

The price is $198.50 plus $10.27 shipping in the lower 48 states.

Please email me for International shipping rates.

If you have any questions, please email me at: kz3dx@yahoo.com

Thanks,
Bill

Correct about "NO Balun" on Lou Varney's design but the writer is
using a coaxial choke, nothing more.
A G5RV antenna has varing success because of installation conditions &
was only designed as a 20 meter antenna.
If you're lucky, it will work on various bands but the feedline should
come away as close to 90 degrees from the antenna feedpoint & AWAY
FROM ALL METAL OBJECTS like gutters, fences, etc!

I decided against a G5RV because of room & height.
I made up a 66' dipole, fed at center with 450 window/ladder line.
That line comes up to & under the eave of the house to a homebrew 4:1
balun which I found on the WWW. I feed that with RG-8 to a NYE tuner

for all bands including 80 meters.
The tuner is quite resetable & easily adjusted, I am very pleased with it & its only 20' high:-)
GL.......
Rich

I really thought about bidding on the case, but anyone with that much negative feedback is to much of a risk.

Yes, very common in guitar amps.

I haven't considered the memory banks at all, I guess because I don't
use them.

An email to VertexStandard about additional opcodes received a
response in minutes. Unfortunately they can provide nothing beyond
what is in the manual. Port sniffing has revealed some additional
command structures and an understanding of why the documentation is so
limited.

An example is controlling the DNR/DNF/DBF features. A single command,
0x00 0xA8 0x?? 0x00 0xBC
is used to manage the combined state of the three controls. If byte[2]
is 0x9F sending the command will result in all three controls being
on. If that byte is 0x9D the resulting state will be the DNF and DBF
are on and the DNR is off.

The command
0x00 0xA8 0x00 0x00 0xBB
is used to request the state of the three controls. The first byte of
the response describes the current state. 0x90 indicates that none of
three are on.

The three controls present eight possible states. Explaining how the
command values relate to the various possible states without getting
into the complexities of state management only works if the audience
understands state management. The published documentation is targeted
at the lowest common denominator and avoids having to explain how

computers work.

Add to complicate things a little bit more the same commands are used
for the speech processor. To turn the processor on the command is
0x00 0xA8 0x?? 0x02 0xBC
The command sets the state of the DNR/DNF/DBF tools along with turning
the speech processor on. To turn the processor off, set the
DNR/DNF/DBF tools' state with byte[3] as 0x00.

The command
0x00 0xA8 0x00 0x00 0xBB reads processor state from byte[2] of the
response. 0x02 is on and 0x00 is off.

If you mean "digital voice", I have heard some on and around 14.235 - 14.236
There are a few programs around that will decode it. It requires a very
clean signal, but when it gets it, it sounds crystal clear! There are some
other bands that people play on, but that should get you started.

Thanks. I've give 14.235 a gander.

I was hoping that it wouldn't take a really terrific signal to decode. I'm still hopeful, but the added overhead of a digital encryption scheme just about guarantees either the need for more bandwidth for the same quality as the analog signal, or a degradation of the analog signal while at the same bandwidth.

I have both the box and the programs. Now to find someone to play with. <G>

|
|And that is at audio frequencies, IIRC. Lots of guitar amps use that tube in
|push-pull, or AB1 single tube config. I'm reaching way back and my memory is
|having problems, but I think I'm in the ballpark.
|
|Ed, NM2K
|
|-----------------

12 watts plate dissapation in class A1. They are useful upto 30 MHz or
so. They were also used as RF output stage for some older tube CB
radios in the 60's. You can get about 3.5 watts carrier out in a class
C plate modulated stage. Sufficient for meeting the requirements for
CB. They were definitely more common in audio applications.

In addition, I believe you have to be listening at the start of a transmission for the signal to be heard. HF digital won't be the sort of thing that we randomly tune across a band listening for a CQ. I suspect for it to catch on, HF will almost need to be channelized. That won't get rid of the strong signal issue. I'm not really sure of the advantages of Digital HF over analog, unless it is a simple "Digital is always better" thing.

A similar situation exists in digital SSTV. The mode can send pictures of just about any size, but if the receiving transceiver doesn't get the signal right, it prompts the transmitter to retry. Sometimes the message just doesn't get through because of noise, QRM, etc.

It's enough of a problem that many suggest not even trying it unless you are running serious power.

I reported an obvious CB amp a few weeks back. It was even
stated in the writeup that it was intended for CB use. Four
reports, and eBay never pulled the auction. Their enforcement
is haphazzard at best.

Well, I have a kilowatt to try and use digital phone with a low inverted vee.

If I understand it correctly, HF digital is using FEC (Forward Error Correction), which would contribute to the characteristics that you are describing. It's been a while since I messed with Amtor/Pactor and other digital modes. I'm sure some of it will come back in time.

Maybe I'll give it a shot with the commercial box I have and then sell it if I'm not pleased with it. Selling is something that I do quite often anyway. I like to try lots of modes, like many other hams.

I am treying to get echolink to work through my network. I have a belkin fsd7230-4 router and a speedstream 5200 modem router. I tried direct connect through the modem setting up port forwarding and it did work, through the router though is a nother story. Any ideas? Port forwarding in the belkin has been set up.

Just a suggestion, have your speedstream 5200 forward ALL of it's ports
to your Belkin.  There might be a 'DMZ' setting in the Speedstream
configuration.  I use the same model Belkin router along with another
router that splits off my digital phone system ports from all the rest.
The DMZ setting works for me.

So, in short, there are folks out there who rat out a person posting a CB
linear. Interesting.

Would you expand on your use of the term "rat out"?

For what its worth, I had a similar situation a few years ago, although with different equipment...   my Actiontec DSL modem/router was feeding my Linksys wireless router. Never could get Echolink to work properly through all that. I ended up putting my modem/router into dumb " bridging " mode, with no routing action activated in it. At that point the Port Forwarding in my Linksys Router worked well and Echolink functioned properly.

On the Generator Unit PC 080 there is a connector on the pcb , marked as J 501 . It is a 5 pole receptable . On it there is plugged a 4 pole plug and you can put it in the J 501 in two way's . But .. what is the purpose of this connector ? On the 4 pole plug there are 2 connections , pin 1 and 2 are connected and also pins 3 and 4 . But I do not know what this plug does . Is there anyone who can help ?

Yeah, amazing isn't it? I worked hard for my commercial
and amateur licenses. And, I intend to protect what I've

earned. Any scoff-law who'd run an illegal amplifier wouldn't
give two hoots about freebanding on the ham bands.

Tom,
Thanks for the tip.  I put in my routers IP address and it says not a
valid NAPT address.  Can I disable the NAT/NAPT feature and still be
ok.  I have firewall and encryption on the router.

Hi nb,  I went to www.cbtricks.com and the only Sonar linear they list is
the BR-21.  They say it's a 30 watter made for their ham tranmitter.  It can
also be used for CB if the correct capacitor is in and the correct inductor.
See the schematic they have.  Hope I've been some help.  Rollie

According to docs. on www.cbtricks.com it looks like you have a Sonar BR-21
which is either ham or cb linear. Rollie

I wouldn't expect to get more than ten watts out of it running CB AM. In fact, that would be pushing it pretty hard.

On the other hand, it should produce over 20 watts PEP running single sideband.

The most common 20 meter frequences for sstv is now on 14.230 and 14.233. Set the transmitter for this on usb and make contact on voice. The transmitter will then be on the correct frequency for the audio frequencies of sstv.

Subscribe FREE to the K9YA Telegraph. It's FREE! It's FUN, It's ALL ABOUT HAM RADIO!

September 2008

CQ USS Seattle By Philip Cala-Lazar, K9PL
I Could Have Become a Ditty Bop By Mitch Gill, NA7US
A Contester in the Making By Melinda Alsobrook, KI4CIA
Roy's Rhapsody in Blue By Rod Newkirk, VA3ZBB/W9BRD
Ham History By Dick Sylvan, W9CBT

The K9YA Telegraph is a free, monthly, general interest amateur radiopublication read by ham radio operators in more than 100 countries. The K9YA Telegraph contains the stories and features most wanted by our readers, because it is written by them. An e-Zine, it is delivered monthly as a full-color PDF file.

If you're in the mood for Morse, hankering for history, gluttonous for gear, ravished for a review, needing nostalgia, or just plain famished for fun, you'll find it in the K9YA Telegraph.

To download sample issues, subscribe or write an article, visit the K9YA Telegraph Web site. http://www.k9ya.org

You have this listed as a Transceiver, but I don't see a receiver section.

Why include a 300 Hz. Receiver CW filter with just a transmitter?

By the way, it's really greedy of you to have a separate auction for it's required power supply.

Yeah, and to not address shipping in the auction. . . I don't bid on
anything that does not address shipping costs.

He has it listed as a transceiver because it IS a transceiver.  I have three
here, and have restored two others- and I must say his auction is for the
cleanest one I have ever seen.
As for listing the P.S. separately, this  seems to be standard procedure.
Many BA collectors have HP-23's, 117XC's etc that they use interchangeably
on these rigs, so the factory supply may or may not be required. If I did
not need the supply, I sure woud not want to be paying shipping  on it.

I had wondered if there was some confusion on the part of the previous
poster, since "Galaxy" nowadays seems to be a brand name for CB type
things, though I have no idea if there's any connection to the original.

Off hand, I couldn't think of any transmitter from the real Galaxy. They
had that really fancy receiver in the late sixties, the R-350 or whatever,
and they had transceivers, but I can't picture any transmitters.

Hi Michael,

I don't know of any TX either. The R350 and R1350 are both fine receivers,
but no stand alone TX that I am aware of.

In later years, the CB industry hijacked the Galaxy name and continue to
churn out "10M" rigs.

Thanks for squaring me up. It's surprising there are no designated knobs on
the front for receive functions, not even a RIT, but a peek at the schematic
makes it clear.

I have often felt this may have been an oversight on Galaxy's part, that
perhaps the AF and RF gain control text was left off the silk screen- and
simply never got added. Or, As you can see, the controls are so close to the
top that there is no room at the top for the text. They barely had room to
sneak in the "mic" text between the mic gain and RF gain controls.

Now that I have found my "keeper" BA transceiver- a Hallicrafters Cyclone
and remote VFO, I'll likely be selling my Galaxys' as they no longer seem to
get used.

As I have pointed out, in a previous post, the software which drives
this rig is open source ... that means you can compile it and run it on
linux. (Wine will even allow you to run windows programs on a linux
machine.)

Although they have attempted to obsfucate some functions in the software
by supplying pre-compiled libraries which the software calls, some of us
have reverse engineered these.

My rig has no frequency blocks, for instance. Transmit freqs run the
full range this rig is capable of receiving.

Open source is the key ... However, FlexRadio has plans for supplying
the linux software "in the box" and ready for use. There is just not
much of hurry here as 95%+ of hams run windows ... (probably 99.9999%!)

Hi group(s),

I am looking for the specifications of the CAT protocol mainly for Yaesu and Kenwood TRXs. I have the basic commands in the user's manual but I am looking for full specs, including memories management, etc. Any pointers or hints would be highly appreciated. TNX in advance.

P.

The FT-897D uses 5 byte command blocks.The first 4 bytes hold the
command arguments while the carries the opcode. The manual provides
the opcodes and further details.

Essentially all the control software does is read and write command
blocks to a comm port. In the Windows world the port is controlled via
calls to kernel32.dll.

Get hold of a packet sniffer and trap the comms between the radio and commercial control software such as ARCP2000.

Haven't bothered with Yaesu, but I have a Kenwood TS2000. The radio can run up to 56.7k and looks like a modem. Uses a standard 9 pin modem cable. The Owners Manual is available for download and carries a whole section on the command structure. This structure has been in place since they first started using it and they just keep adding to it. Earlier radios require a level shifter and only run 4800bd but have the same memory and vfo commands.

Beware that even the power on and several other commands require a sequence of commands and telemetry. There are commands that interrogate the status of specific conditions before deciding the appropriate command or string of commands, but simpler things like reading vfos and mode are simple and included in many third party programs.

I am currently using ARCP-2000, LOG-eqf, RIG-eqf (for dos), MCP-2000, and a very interesting Excel spreadsheet by K9DCI that allows management of extreme frequency lists.

I did Google "Yaesu CAT protocol" (this is the first one I need) and similar combinations few times before I looked for the appropriate group to ask the question. Unfortunately I found little to none information of the kind I look for.

Huh - this I also had in mind already but I would still prefer to have
the specs rather than sniff the communications. This is especially valid
when the reason why I need the specs is defined as "no Windows machine
to run the commercial (or non-commercial) control software in the
vicinity" ;-)

> Haven't bothered with Yaesu,

Well - that is exactly what I need now. Kenwood is second on the list
because I plan to buy one for winter. Right now I need to do something
with the Yaesu.

> but I have a Kenwood TS2000. The radio can run

Good to know that there is at least some sanity over the "commerciality"
within Kenwood staff.

I think I shall archive this post as I plan on TS2000X and may return to
it later.

Yes - the manual provides the basics and explains how to construct the
packets etc. What is missing though are the methods of handling the
memory banks. It even doesn't say how to read/write memory locations (I

may suspect that user memories are to be accessed by reading/writing specific hardware memory addresses). And I have read somewhere that there is a full specifications document, which covers these topics plus there is even more - some undocumented features, which can be accessed this way. I am looking for at least the specs that would allow one to deal with user memories. FT-897 is a good choice - I have to deal with FT-857, which is supposed to be fully compatible, but also with VX-7R, which almost certainly is not.

Have you tried looking in the files for the Hamlib project on
Sourceforge?

http://hamlib.sourceforge.net/

They keep a repository of various software interfaces to a lot of
radios. I have used the Kenwood library to get some hints on how to
talk to my TS-950. You might be able to gain some insight into how your
Yaesu talks it's COMM port.

Tom

Hello,
I'm a proud owner of a new TS-480 transceiver, it has an odd trouble when i
crank the tuning knob it
squeak terribly, it seems caused by a friction effect...
Anybody, over there, knows how to dismount such knob? I can't see any
screw...
Thanks in advance

Claudio

Claudio-

I just checked mine and found it also has a slight squeak. It seems to
change when I move the switch directly below the knob, which I think

controls the friction.

Now that might be a good hint! Thank you, I shall definitely look into
those. Still, I am wondering how do all those people who write the CAT
software gain their knowledge. I would expect the producers to
publish the full specs but so far no reply from "vertex"..

Hi guys

Need your advise because my GR1225 UHF Repeater cannot transmit far.
This unit I buy secondhand last month from my friend. After make field
test, coverage only 6km radius. I don't know whether I wrongly
programmed or hardware problem.

DF4ZS developed a RF speech clipper that fits into the Yaesu MH-31
microphone shell. This mic is used with the popular, tiny FT-817
transceiver along with others and in all speech modes. His clipper has
a SSB IF.

Details: http://jwm.de/afu/0ft817eng.htm
Reviews: http://www.eham.net/reviews/detail/2732 (6)

There are no reviews of the VoiceMax on eham.net while there are 21 of the W4RT Electronics "One Big Punch" which uses a similar IC and can be installed either in the MH-31 or inside the case of the FT-817 et al.

DF4ZS also makes an outboard RF Clipper with adjustable a.f. compression and integrated noise gate.

If you don't mind tying up a computer to do your speech processing, VE3NEA developed freeware to work with a soundcard between the mic and the transmitter that functions as bandpass filter, 7-band equalizer, noise gate, compressor, and RF envelope clipper. http://www.dxatlas.com/VSh=
aper/

This DF4ZS is a clipping type processor... nothing like the VoiceMax audio compressor. You are correct, Since VoiceMax is a new product and there are only about 150 units in use worldwide... so far there are no reviews on Eham. Thanks for your interesting comments.

That is true. SSB RF clipping is proven to deliver an honest 6 dB improvement.

EARN A FORTUNE IN LESS THAN 30 DAYS WITH VIRTUALLY NO INVESTMENT.

This is a home based opportunity to make substantial money with a $10.00 investment: as seen on Oprah, A Current Affair and Today Tonight.

THIS REALLY CAN MAKE YOU EASY MONEY. IT WORKS, BUT YOU HAVE TO FOLLOW THE LETTER FOR IT TO WORK. THIS IS NOT A PYRAMID SCAM!!

For a simple investment of 15-30 minutes and just $10.00, it is 100% worth it to make thousands so quickly. This is not another scam that takes lots of your hard earned money; this is a no risk investment that will make you thousands of dollars

I figured "what have I got to lose except $10.00, right?" So I invested the measly $10.00. Well GUESS WHAT? Within days, I started getting money coming into my PayPal account! I was shocked.

REQUIREMENTS:
You must have a verified PayPal account. If you do not have an account, take a few minutes to join Paypal FREE:

http://www.paypal.com

When creating your Paypal account make sure you use the same email address as your user name in the list below so people can send money to your account.

STEP 1:
Once you have a PayPal account running, use PayPal to pay $2.00 to EACH of the 5 email addresses below because you pay people with an email address in PayPal.

FOLLOW THESE EASY STEPS:
1. Log in to PayPal. Go to "SEND MONEY" tab.

2. Type in
Recipients name: (email address)
Subject: "email LIST".
Category: "SERVICE".
Comments: "PLEASE ADD ME TO YOUR email LIST".

3. Next screen: "CHECK PAYMENT DETAIL"; select "NO SHIPPING ADDRESS REQUIRED".

4. Send money.
THAT'S IT, YOU'RE DONE.

What you are doing is creating a service. THIS IS ABSOLUTELY LEGAL. You are requesting a legitimate service and you are paying for it. Send $2.00 to EACH of these Paypal account email addresses:
1.) 17sagp@gmail.com
2.) bentoj_44@yahoo.com
3.) tyd84@hushmail.com
4.) jhn585@gmail.com
5.) tanyanewzealand@aol.com

STEP 2:
Now, AFTER paying $2.00 to each of the email addresses above, take the #1 email address off the list, move the other email addresses up (5 becomes 4, 4 becomes 3, etc.) and add your email address as number 5 on the list.

STEP 3:
Keep this article as close to the original as possible. Post this article to at least 200 newsgroups (there are thousands of groups). And email your message to as many people you can. Remember, the more

you post and email the more money you make.

I do have an FT8500 and have used the Win 3.1 programming s/w but I haven't

considered Cat control or if it is even possible. It has a remote front
panel option, so there has to be some serial communication going on, but
haven't looked.

Good luck OM. There must be someone fooling around with Yahoos.

I have a Heath kit SB220 FS that I started restoring and never finished. It
is in ex condition cosmetically, electrically I am not sure yet. It has all
new mods, soft key, soft start, new doubler board and diodes, new filter
caps and bleeder resistors, new filament transformer from Peter Dahl. I do
not have the 3-500Z tubes. I cannot guaranty it, but I think all that is
needed now is the tubes. I have too many amplifiers so I am selling this
one. $350 plus shipping from 70053. I have photos if you are interested.

OK, I got an old linear that I acquired from my late FIL about 20 yrs ago. It's been in cool clean storage ever since and I'd like to get rid of it. I tried to sell on ebay till I got mucho alerts to the effect ebay no liking CB linear listings. I pulled it. I don't know much about radio, but I'm sure it was a CB linear cuz he never had a ham license. I was advised by one helpful fellow that I should list it as a ham linear and make no mention of CB. That makes sense, but I pride myself on being very accurate and honest about what I sell and so would like some help identifying this particular piece of hardware, it at all possible.

It has no brand name on it, so I suspect it's a homebrew. It's a very nice job if it is. It has a 2" high chassis box with one vacuum tube and a pretty good size transformer mounted on top. A 4" high full cover over that is machine perferated on 3 sides for cooling.

Transformer: GRAND 11-2206A GT-6974 7578049
vacuum tube: 6805/EL84

On lower front lower chassis, it has an ON/OFF and STDBY switch and one red light. The meter is a Sonar brand:

S units --> DB
Output 0-30+

Rear lower chassis has IN and OUT antenna jacks and a ground wire terminal and of course, an AC plug. Overall dimensions with cover on are 6"H X 7"W X 5"D. Weight approx 6-8lbs.

I don't know if anything can be determined by the above info, but any help would be appreciated. I can open her up all the way, if that will help.
I'm not real savvy on radio, but do know basic electronics and can identify different components. Thank you.

nb

The plate dissapation of the tube you described is only about 10 or 20 watts. This is not anything any ham would want.

And that is at audio frequencies, IIRC. Lots of guitar amps use that tube in
push-pull, or AB1 single tube config. I'm reaching way back and my memory is
having problems, but I think I'm in the ballpark.

I am interested in this mode of operation, but don't know anything about it on amateur radio, such as where do folks hang out on this mode? Is one band preferred over another? How is low power operation using this mode? And just about any other questions concerning this mode. TIA

Ed, NM2K

The K9YA Telegraph is a FREE, monthly, general interest amateur radio publication read by ham radio operators in more than 100 countries. The K9YA Telegraph contains the stories and features most wanted by our readers, because it is written by them. An e-Zine, it is delivered monthly as a full-color PDF file.

If you're in the mood for Morse, hankering for history, gluttonous for gear, ravished for a review, needing nostalgia, or just plain famished for fun, you'll find it in the K9YA Telegraph.

To download sample issues, subscribe or write an article, visit

```
X-Original-Bytes: 946

Awaiting my new Alinco DJ-X10.  I bought it used and it is coming minus a DC
charger or power cable.  I see it takes input from 8-15v.  I have a few old
power supplies, but was wondering what millimeter size power plug it takes.
The online manual I found does not specify.

Thanks

The following link will take you to Agilent's manuals webpage, where you will find the operation/service manual for the 8640B as a free download:

ftp://ftp.agilent.com/pub/manuals/

This is the name of the file that you will be interested in:

08640-90017 8640B Operating & Service Jan74.pdf

Many people are selling HP manuals on eBay that are available as free downloads from the Agilent site. This isn't only limited to HP manuals...........many free manuals that are available on the BAMA website and mods.dk are also being sold in this manner. Unfortunately, many folks aren't aware of these websites.

Pete

Thanks for the suggestions guys, but I already have the Agilent manuals.
The problem is, the manuals are not detailed enough to answer my questions.
I was hoping to find an HP 8640B Guru.
I know there are guys out there that go nuts over these old signal
generators, and one day I would like to chat with such a person.
- Stan

Transmutaatiotekniikasta.
*Maassamme ydinalalla on tuskin mit��n niin tarkoin TABU:na piretty�
systeemi�, kuin mahdollisuus neutraloida edes osin maailman vaarallisimpia
ihmiskunnan ydinj�temoskiaan ydinvoimalasaasteista. P�iv�n selv�� on, ett�
t�m� olisi mahdollista, koska sotilassektorilla systeemi� on py�ritetty
vuosikymmenet. Mutta siviilisektorilla ydinmoskiinsa hukkuva ydintehtailumme
ei suin surmin halua tutustua realiteetteihin, koska periaate "likaaja
maksakoon pahuutensa" panisi ydinteollisuuden vastaamaan ihan OIKEASTI
ydinrikoksistaan ihmiskuntaamme vastaan! Siksi ydinhallintomme ei edes
maksata TVO/Posiva,Fortumeiltamme rahaa asiallisempaan
ydinj�tevarastointitekniikan kehittelyyn. Vaikka syyt� enemm�n kuin olisi!

Kyse on siis siit�, ett� t�ysin toimimaton "suolapintasuolammikkoviskonta on olevinaan halvempaa!" ja todellisuudessa kaikki ydinj�te muutaman sentin n�enn�iss��st�miseksi pannaan suolavesiallikkoihinsa h�yrystym��n surutta lastenlapsiemme tuhoamiseksi!

* Mit��n edes alkeismoraalia ei t�ss� ydinr�yhkeydess� voi sivistyskansa n�hd� toki. Yht� kaikki asiasta on toki pidetty my�s tutkimuksia. Mutta koska transmutaatio ON realistinen maailmanlaajuinen mahdollisuus jo nyt saati tulevaisuudessa, mutta pikkasen maksaa. Ennenkaikkea, koska ydinhallinnostamme miljoonien hengenvaaraan asettaminen on..niin "hauskaa"? Mit� ilmeisemmin vallank�yt�n, valtiydinterrorin ty�v�line painetaan KAIKKI my�s t�m�n aiheen esittelykanavat hiljaiseksi. Siksi p��tin, ett� nimenoman minun teht�v�n�ni on ydinalanalan huippuosaajana maamme ensimm�isen� raottaa t�m�n realiteetin muotoja vuosikymmenten 100% valtiotiedotuspimennostaan. Tulevaisuuden ydirikoksen Nyyrbergin oikeudenk�ynniss� n�m� artikkelien esill�olot tulevat toki lis��m��n rajusti syyllist�misn�yt�ll��n vastuulliset ydin�kymme ydinvaltiorikostemme tekij�iden paineita! Pidemmitt� puheitta valtion huippusalattua aiheeseen liittyv�� materiaalia siis vihdoin ja viimein my�s TIETOISUUTEEN ja PALJON!:

Transmutaatiolaitteisto on er�s t�rkeimmist� tulevaisuuden k�ytetyn ydinpolttoaineen j�lleenk�sittelyosasista! Laitteella saadaan tuntien s�teilytt�misk�sittelyll� pudotettua hengenvaarallisten k�ytettyjen polttoainetankojen s�teilytasoa 1000 osaan. Aiheesta l�ytyy loistava artikkeli. Jokin aika sitten esim. Tieteen Kuvalehti k�sitteli t�t� pitk�lle kehitetty� innovaatiota ansiokkaasti.

Idean alkutaipaleet sijoittuvat Cernin hiukkaskiihdytinkokeiluissa saatuihin tuloksiin. Tarkoitukseen tarvitaan j�re� hiukkaskiihdytinyksikk�. Perusajatuksena on hiukkaspommittaa, (ydinvoimapiireiss� niin pidetty teema tuo viimeinen), mutta asiaan. Testeiss� on voitu havaita, ett� kiihdyttimest� tulevat partikkelihiukkaset poistivat fissioprosesseissa virittyneiden atomiytimien viritystiloja tramaattisesti. Ehk� yksi hyv� vertaus tilanteelle olisi seuraava: Ydinreaktorissa oleva polttoaine on "ik��n kuin" kaupunki joka joutuu sotapommituksissa rauniotilaan. T�ll�in osittain sortunut talokanta sis�lt�� runsaasti potentiaalista satunnaisesti purkautuvaa "gravitaatioenergiaa" joka romahtaessaan ohikulkijoiden p��lle s�teilee satunnaista gravitaatioenergiaansa vaarallisen paljon ymp�rist��ns�. Nyt siis hiukkaskiihdyttimell� "murskataan" lis�pommittamalla muodostuneet romahtamisvaaralliset rauniot. T�ll�in siis rauniot jyr�t��n "turvalliseksi ihmisille" alueella liikkumiseen.

No, miksi sitten ei voitaisi kuljettaa polttoainetankoja jo olemassaoloevien hiukkaskiihdyttimien luo saamaan k�sittely�? Kimurantiksi tilanteen tekee, kun muistetaan Euroopan laajuinen massiivinen vastustus t�m�n k�ytetyn uraanin edustamaa supermyrkyn kuljettamisesta surullisenkuuluisaan eurooppalaiseen hy�t�reaktoriin. T�m�n opettamana se vaihtoehto onkin koettu riskialttiiksi. Ehkei n�ill� turvattomilla aineilla kannata vaarantaa kokonaisten valtioiden olemassaoloa. Muuten, kuin ydinvoimaloita tehtailemalla tietenkin.

Jos jo aineen kuljetus koetaan ongelmalliseksi, on nostettu esille ajatus ett� halvempi vaihtoehto olisi kehitt�� liikuteltava laitteisto. On laskettu, ett� jopa yksi eurooppalainen yksikk� voisi k�sitell� koko maanosassa muodostuneen ydinpolttoainekertym�n. N�in laitehankinta tulisi maakohtaisesti t�ysin realistiselle tasolle, jotenka hintakaan ei ole ydinvoimapiireille ylitt�m�t�n. Jonkinverran ongelmia on tuottanut t�m�n pienehk�n laitteen tehon saaminen riitt�v�ksi. Mutta suuremmissa kiinteiss� hiukkaskiihdyttimiss� on jo nyt saatu riitt�vi� tehoja. T�m� ei ole ongelman ydin.

Miksi sitten suomalaisessa ydinvoimakeskustelussa j�rjestelm�llisesti t�m� toimiva tulevaisuuden tekniikka halutaan j��r�p�isesti torjua? Miksi TVO/ Posiva konsortio, piittaamatta kiistattomista laitteen tuomista eduista, haluaakin pikaisesti haudata j�tteens� tulevan laitteiston saavuttamattomiin. Toisihan ydinj�telakiin aiheesta lis�tty transmutaatiok�sittely kiistatta lis�hintaa konsortion ennest��nkin kalliin omakustanteisen ydins�hk�n hinnan p��lle. Julkisuuteen tulisi ihmisille selvemmin esille, ett� kuinka vaarallista ja ep�vakaata peli� yhti� pelaa torjuessaan t�m�nkin loistavan idean.

Sitten viel�, TVO/Posiva konsortion tarkoituksena oli jo loppusijoitusluolaston paikkaa kartoittaessaan seuraava. Aikoinaan geologit ilmoittivat Olkiluodon kallioper�n niin huonoksi luolaston sijoituspaikaksi, ettei sit� rankattu edes 100 parhaimman suomalaisen loppusijoituspaikan joukkoon. Koskapa se sijaitsee oseaanisen laattatektoniikan t�rm�yspisteess�. Jossa Atlantin sel�nne luo kasvavaa puristusta yh�. Koska t�m� valtamerellinen sedimenttimurskevy�hyke luo loppusijoituspaikalle kenties suomen huonoimmat ja ep�vakaimmat s�ilytysolosuhteet.

Miksi sitten TVO/Posiva konsortion kovassa painostuksessa Olkiluoto otettiin v�kisin 101 vaihtoehtona mukaan? Koska alueella oleva luonnonmerisatama luo loistavat mahdollisuudet tuoda maailmalta huomaamatta ainokaiseen ydinj�tevarastoon vaivatta kovalla valuutalla k�ytetty� ydinmateriaalia. (Asiaa muuten TVO on varkain , tarkoin piilossa julkisuudesta aktiivisesti kysellyt jo 5 vuoden ajan mm. Ruotsin kautta maailmalta Suomeen kuljetettavista ydinj�tteist� mm. Olkiluodon satamaa hy�dynt�en! Sain ennakkotietooni vahvistuksen "sis�piireist�" mm. 2008!) T�m�n transmutaatiolaitteen mukanaan tuoman helpotuksen takia saattaisikin t�m�n loistavan ydinmonopolibisneksen perusteet murtua. Koska v�hemmin s�teilev�� polttoainetta voisi jokin "kilpaileva" taho my�s varastoida muualle ja viel� Posivalaista vaihtoehtoa turvallisemminkin. Silloinhan selvi�isi my�s, ett� kuinka kehnosti Posivalainen loppusijoitusluolahahmotelma on suunniteltu, verrattuna "oikeampaan" vaihtoehtoon. Silloin loppusijoitusbisneksen hintataso luonnollisesti laskisi ja TVO/Posiva konsortio ei saisi kaikkia haikailemiaan rahoja.

What is a good price for a Yaesu FT-530, in excellent condition, with
charger and manual, in the box ?

Thanks and best regards.

Stan-

I recall seeing that discussion some time back. Someone mentioned using an external HP Frequency Doubler 11690A. This is a small device with male and female BNC connectors.

I found the 11690A Operating And Service Manual somewhere, possibly at the HP site. It contains a graph of conversion loss for different frequencies vs input level. Internal construction details are shown.

At the time, I asked if anyone knew if you could use the internal parts of the 11690A to add option-002 to the 8640B, but did not get a response.

Greetings all,
Where can one obtain programming information for the JRC NRD-535D shortwave receiver?
I want the kind of information that a programmer would require when writing code to control this radio.

Also, I am also interested in hearing from others as to their likes and dislikes of various software packages used with this radio. Any recommendations?

Thanks,

Stan Shankman

This Icom R7000 Receiver/Scanner covers from 25 to 999 and 1025 to 2000 MHz (UNBLOCKED) in the following modes: AM, AM-W, FM, FM-W, FM-N, USB and LSB. The R7000 covers low band, VHF civil and military aeronautical bands, marine, business, FM, pirates, amateur, government, TV bands, NASCAR, border patrol, plus much more.

99 memories store frequency and mode and may be selected by simply pressing the memory switch, then rotating the memory channel knob or by direct keyboard entry.

Scan modes include full-scan, programmed-scan, mode-scan, selected-scan, priority-scan and auto write programmed-scan. By depressing the Auto-M switch, the receiver automatically memorizes frequencies in use while the unit is in the scan mode. Six tuning speeds: 0.1, 1.0, 5, 10, 12.5 or 25 kHz. Requires 117/240 VAC.

This is one of the very best receivers Icom has ever manufactured. It is use widely by governments around the world, military, intelligence and anti-terrorism agencies. This radio is extremely clean. There are a few very minor (patina) scratches & paint chips. There are splash marks on the rear panel, but that does not affect the operation. The front panel is in perfect condition. It is guaranteed to not be DOA.

Please email me for more pictures: kz3dx@yahoo.com The price is $478.50 for the radio plus shipping. The AC power cord is included. Shipping & Insurance: to the lower 48 states is $48.35. To Europe is $98.60. To Australia/NZ is $115.27.

If you have any questions, please email me at: kz3dx@yahoo.com

Thanks for looking,

Bill

Rather than attempt to answer some of your questions with possibly erroneous info, and since you have the manual on file, have you studied the Service Sheets in Section 8, and especially page 8-73 closely? I might answer some of your questions regarding missing covers, etc. I haven't dug through the thick manual for reference to your other items... My manual does not cover any details on the Options, only the main unit. I'm using HP manual, PN: 08640-90017

The manual is here "somewhere". I haven't seen it since we moved from NJ to GA over ten years ago, though I do not doubt that it made it here with us.

I was running this combo a few years ago and I do not remember resetting a switch inside of the rig.

Since your post, I have received a jpg of the original manual for the FRB-757 and that has irrefutably answered all my questions. Thanks to everyone for your help. This has been a very pleasant exchange/experience.

Ed, NM2K

I gave $230 for mine new when they were phasing them out. They are well made and the heat sink is able to dissipate into the belt clip rather than the battery. RX speaker audio is less than I want but at least the radio is large enough to find the keypad.

If you can get one of the protective gloves for it, they will stay like new for a long time.

I still have it, and everything works. I replaced the knobs and Antenna not long ago. RF output has held up too.

Nothing to do with ground reflection but...

Shunt matching capacitor to raise feed point impedance.  But do you need it
in your installation?

I used to use a BC variable cap hooked up to a throttle cable so I could
fine tune my Hamsticks,  Yes it made a difference although I never gave it a
Buck Rogers name.

That is a REAL shame, let's do that right now ...

How about AITD?  For "Alien Intelligence Tuning Device", you like that name?

Regards,
JS

If you can get $150 you're doing good.
Although it is mint it is also very old now.  I still have mine
and it works AOK!!
Good luck!!

73

Hello,
I'd like to add the WARC bands to the SPR-4 receiver. If I understand the docs correctly, the crystals need to be for f + 11.090, thus I need 21.09, 29.09, 35.09 MHz xtals. I have no idea though about the form factor (should it be HC-49?) nor about the load capacity (10, 15 or 20 pF?). Anything else that I could be asked at order time?

Thanks

Pf, ik5pvx

Beach Audio is selling that brand new for $68.99

http://www.beachaudio.com/Terk/Fm-50-p-298.html?utm_campaign=froogle&utm_content=reg&utm_term=FM-50&utm_medium=cpc&utm_source=froogle&GTKW=FM-50&GCID=C12585x003

These folks have it for $65.49

http://www.sureneeds.com/fm50.html

If you paid any more than these prices when you bought this item, you were overcharged. Who did you buy this antenna from? This way, I will know which retailer to avoid.

Pete

LOL!

Where, exactly, would you expect posts about digital equipment--other
than a digital/equipment thread?

Maybe rec.radio.amateur.smokesignals?

Geesh, takes all types! :-(

Regards,
JS

If you failed to notice, the transceiver comes with open source software; Meaning, you can modify the software to operate with any digital data transfer protocol (modes, to the illiterate) which anyone can imagine.

Regards,
JS

Yanno, the illogic of that statement overwhelms me. It makes me wonder
where people capable/prone-to making such statements come from?

I mean that statement presupposes that an interest in state-of-the-art
equipment is some sort of illicit/insane leaning which needs to be
ignored/attacked.

What, you are still awaiting the return of the spark-gap transmitters?
This all, only, sounds to me as if you wish burden others with your
preferences/likes/interests/beliefs/etc ... What? Everyone is an
amateur politician these days?

Regards,
JS

I usally refrain from commenting on stuff like this but I gotta ask
today:
The groups posted to are
rec.radio.amateur.equipment,rec.radio.amateur.digital.misc

The url is pointing to a very high end transciever.

Just what is it that does not fit?

The TS-820S (and TS-520) came out in 1978. I got one soon after I got my ham
ticket. The TS-830 added the new WARC bands we didn't have in the
TS-820/TS-520 and 1981 sounds about right.

Yes, VoiceMax is selling well. We are unable to keep up with the
demand at this time. These units are back-ordered until late August08.

sound more like the garbage that fell off of the BACK of the animal while it was taking a CRAP. OH - wait a minute - "back-ordered" - that is the convention that you go out and turn-around and order something?

Archive-name: radio/ham-radio/recruitment
Revision: 1.1 2007/09/29 18:42:47
Posting-Frequency: posted monthly
URL: http://www.faqs.org/faqs/radio/personal-intro/

Changes followed by "|".

The rec.radio.info newsgroup, first established in 1993, has been recently revived by an active moderation team. We are currently seeking suitable information, FAQ, and bulletin articles from the entire rec.radio.* newsgroup hierarchy for simultaneous cross-posting to our newsgroup.

We are seeking a replacement maintainer for the following information bulletin formerly posted to rec.radio.amateur.* (and currently archived at http://www.faqs.org/faqs/radio/personal-intro/):

```
 radio/personal-intro
 Subject: Guide to the rec.radio Newsgroups
 Maintainer: jeffreyh@Hawaii.Edu (Jeffrey Herman)
 Last Posted: 9 Nov 2001 06:18:17 GMT
 Posting-Frequency: 15th of each month
```

We are willing to provide any technical support necessary to get this article updated and automatically posted again at a regular interval. This would include establishing contact with the original maintainer for any necessary permissions. We would prefer to seek a new, dedicated maintainer at this time, rather than start auto-posting the original article ourselves.

For more information about our newsgroup, see:

http://www.panix.com/~rram/usenet/rri/index.html

Please direct any comments, questions, or criticisms to rec-radio-info-request@panix.com.

Archive-name: radio/swap/recruitment
Revision: 1.1 2007/09/29 18:42:57
Posting-Frequency: posted monthly
URL: http://www.faqs.org/faqs/radio/swap-guide

Changes followed by "|".

The rec.radio.info newsgroup, first established in 1993, has been recently revived by an active moderation team. We are currently seeking suitable information, FAQ, and bulletin articles from the entire rec.radio.* newsgroup hierarchy for simultaneous cross-posting to our newsgroup.

We are seeking a replacement maintainer for the following information bulletin formerly posted to rec.radio.swap (and currently archived at http://www.faqs.org/faqs/radio/swap-guide/):

 radio/swap-guide
 Subject: Rec.radio.swap FAQ: A Guide to Buying and Selling on Usenet
 Maintainer: jeffreyh@Hawaii.Edu (Jeffrey Herman)
 Last Posted: 6 Nov 2001 19:25:51 GMT
 Posting-Frequency: Monthly

We are willing to provide any technical support necessary to get this article updated and automatically posted again at a regular interval. This would include establishing contact with the original maintainer for any necessary permissions. We would prefer to seek a new, dedicated maintainer at this time, rather than start auto-posting the original article ourselves.

For more information about our newsgroup, see:

http://www.panix.com/~rram/usenet/rri/index.html

Please direct any comments, questions, or criticisms to rec-radio-info-request@panix.com.

Thanks for your comment. In regard to your email... more VoiceMax
modules will be available earlier than expected... around August 1st.
We should have a few left after the back-orders are sent out.

I'm not a ham operator! But I figure you guys can explain what an Isolation Transformer does.

I came up with one at an estate sale this weekend of a former TV repairman. Among the 1970s vintage test equipment and color bar generators was this xfmr. This unit says "Isolation Transformer 5 Amps, 600 Watts" on one side and "Isolation: Primary 120 VAC, Secondary 120 VAC" on the other. It's about 8" square and as you can imagine, quite heavy.

I was guessing it keeps voltage spikes out of the equipment that's plugged into it, but then I saw some old posts in this group which mentions grounded chassis.

Do people who have fairly modern ham equipment still use these things?

They are useful for older equipment where it is convenient to have the 120V supply "floating" above ground. In other words, there is 120VAC potential across the transformer, but neither leg has potential from that leg to ground. They are used on the bench where "hot" chassis poses a shock risk/hazard. They are also handy where "leaky" bypass capacitors across the AC line cause GFIs to trip (as in radios such as R390A). I have a 1KVA unit and used it quite often. It does little for shielding against spikes or other line noise.

Good find.

Barry - N4BUQ

The transformer is not to keep out the spikes. Some of the older equipment (vacuum tubes) did not have transfromers in them and one side of the chassie was connected to the neutral side of the power plug. If the house receptical was not wired correctly or if the plug was put in backwards then the chassie of the equipment would be connected to the hot wire and if you touched it and were grounded you would get shocked or worse and could die.

Sometimes when testing equipment without a transformer in it the isolation transformer was used to make sure the grounded chassie would not be connected to the hot side of the incomming AC power.
Many times the test equipment would have its chassie connected to the ground and the chassie of the two pieces of equipment would be connected together.

Modern equipment with transistors seldom have this problem.

It very much appears to be "for auction," not "for sale."

Hi all;
Well I never thought this would happen but I unpacked my Icom 781
after 3 years in its box(moved to 4-land).
Today I took it out & put in place on my desk.
Fired it up & initially it seemed fine, full output, 150 watts, Audio
adjusted fine, received great.
After a short while of familiarizing myself with the controls, I
started to notice power dropping off. Bad Cable I thought so I changed
it & it was fine for a short time then did the same thing, no output,
ALC meter pins to the right on mike key up. Another bad cable? I slid
it back out again & changed the Coax cable again. Seemed fine but then
started over.
I got sorta annoyed & took a break, came back 2 hours later and was
perfect again but after 45 minutes it started again. Power dropping
off, finally nothing out, ALC meter pins on mike key-up but the PO on
meter shows fine but outboard meter shows zero.
  Anyone have any ideas?
```

I'd hate to have to send this out:-(
73 & tnx,
Rich WA2RQY

Isolation transformers such as the ones Tripplite sells, do filter well.
They also eliminate the ground to line spike issue. One leg of the secondaries
is tied to ground, eliminating any differential noise.

As Trip Lite says...

* Superior line noise reduction and spike suppression
* Faraday Shield offers 100% isolation from the input AC line
* Secondary neutral to ground bonding eliminates common mode noise
* Removes EMI/RFI noise, utility switching transients and background spikes
* Select models feature hospital-grade plug and receptacles

But, there are transformers without the bonding, as most service shops would use.
It would be easy to add a switch to bond either leg to ground. Might be handy.

A nicely made radio anyway!
I once had a mint set of KW Electronics Twins.
The KW Altanta looks like a Swan 500, well similiar:-)
I shudda kept those as they were rare & beautifully made.
GL with the Auction.
Rich

I'm new to amateur radio.
I just passed my Extra Class test. (100%)
I need an antenna tuner for my G5RV-E dipole.
I�m running an ICOM IC-718 HF transceiver.
I was wondering if any one had some recommendations.
I don�t have a lot of money so I�m on a tight budget.
Any help would be greatly appreciated.

My solution was to build my HF antennas so that they do not require a tuner
and its attendant losses.

While there are transformers designed to keep out spikes and filter the
line, you have to look at the question.
 The transformer was mentioned was with test equipment.  Usually it is to
isolate the hot chassies, not to eliminate spikes and noise.

I use an MFJ 949C tuner with my G5RV. Its not the best tuner
around, but it works fine and has been reliable. Probably the
least expensive tuner you'll find.

Congrats on the extra!

Xref: g2news1.google.com rec.radio.amateur.equipment:308
rec.radio.amateur.boatanchors:476 rec.radio.swap:323

Yesterday I bought, from a local Radio Shack, a Grundig G5 SWL receiver and found myself quite pleased with it and decided to share this with y'all. $150.

For some time I was looking for a replacement, new portable SWL receiver for my old GE portable SWL receiver (runs on 6 D cells, about the size of two big Kleenex boxes, and all of its switches, pots, varicaps are now all noisy as hell and hard to do anything with, plus other problems).

I was very interested to see, recently, that some (ham) handi-talkies now have SWL capability, and even SSB/CW capability. So, I was thinking about those, too, but the ones I asked about are about $300 each. More than I wanted to sink into a toy of this nature.

While in the RS store, they had a G5 sitting on the shelf and with good batteries in it (a good omen) and in ten minutes of fiddling with all the buttons to see how much I could figure out without reading the manual, I was encouraged to give it a try. You could not hear squat in the store, maybe because most of these new stores have metal 2x4s, metal roofs, and local electrical noise, but I had the hunch that maybe this thing was going to be decent.

Here's the short skinny: Its about the size of two king-sized cig packages. 4-AA cells. Comes with its own walwart AC supply.

Really nice performance on features I was interested in. the PLL local oscillators allow _continuous_ tunning from 150 kc to 29999 kc, on AM and SSB (and CW), and in one-kc readout steps on the digital frequency read out. For SSB and CW fine tuning, there is a vernier bandspread knob on the side which seems to give you something like a +/- 2 kc range for RIT, so you can get SSB stations tuned in if they are not on exact 1 kc frequencies (lovely!). It has an AM "bandswitch" button that cycles you up through starting frequencies of the major SW bands so you can tune to where you want to be more quickly. The manual tells how to do direct keyboard entry if you know the frequency you want to all digets, and that works, too. It also has 700 memories but I have not tried to learn the complicated process to use them.

So, sitting in my livingroom favorite chair (house is wood frame construction, no sheilding problems), I was tuning up and down the 80-75 meter to 20 meter CW and SSB bands, and with the built in three foot extendable "whip" antenna alone, was copying a large number of all of these stations (when the bands were open) all over. The frequency was also stable, at least over the time periods I was listening. Signal strength, receiver sensitivity was better than I expected.

There is a built in "S meter" with bar levels, but you only get five groups spread out from 1-9 (but, what else do you need?).

There is a two step switch for IF selectivity. Narrow (voice) and wide (music) that (I did not measure) feels like maybe 5-7 kc on narrow, maybe 10-15 on wide. You can easily tune both LSB and USB with the vernier frequency. But, in wall-to-wall crowded conditions, might give you trouble (qrm).

It also tunes the standard broadcast FM band (88-108), and in stereo.

There is a "local-dx" switch for attenuation for close, strong signals.

Downside: there are birdies and PLL noise all over the bands, poor image rejection below 550 kc, and birdies worse in some segments than others, but for the price and size, I'll live with that. There is a "lock" button that kills all access to anything and you have to read the manual to get it unlocked so don't push the lock button if you play with one. IIRC, you have to press and hold that button for more than 3 seconds to get it to unlock everything.

I had the impression that the receiver might be usable in a portable situation (eg motel, vacation) if you could bring a transmitter along and suitable antenna. The receiver has jacks for earphone, ext antenna, DC input, etc. An external narrow audio filter might help in the CW band if it is crowded.

Last but not least, I am not affiliated with Grundig, not related to anyone there in any way, this is not a post in response to some favor they did for me, in any way, shape or form. This is a pure FYI, FWIW "I was pleased with the unit" report and I'm going to have a lot of fun with it.

First get A 50 Ohm dummy load connected to the Xcvr.That may
tell you all you need to know..If it works on dummy load ,look into
your ant system,If no work on dummy load ,,Look at power supply and
see if PA is drawing current from the power supply..If you have no
load on PA the rig will shut down...You may just have several minor
problems ,,,not a major problem...GL W4PQW

And I might add was not identified ad being a Tripplite transformer. Since
it came from a TV reapir man's gear it was as you say to isolate the hot
chassis of some of the old time consumer electronics.

I cannot understand why you changed the heading and not just start
your own posting to advertise this SS, modern receiver on the
Boatanchors forum?

Who knows why he replied to an existing message, but obviously he
had to change the subject header because whatever message he replied
to wouldn't have been about this receiver.

He must be clueless, since he posted it to
   rec.radio.amateur.equipment
   rec.radio.amateur.boatanchors
   rec.radio.swap
   rec.radio.amateur.equipment
none of which really have relevance.

.equipment is about amateur radio equipment, and this isn't.

.boatanchors is about old and heavey equipment, and this isn't.

.swap is for buying and selling, and this isn't

I have no idea why he had .equipment twice in the newsgroup header.

And the one place where there is real relevance, rec.radio.shortwave
is missing.

And he seems to be saying it's a lousy receiver (all those birdies)
yet a good bargain.

Maybe he's saying that despite the digital readout it's about par
with all those low end junk shortwave receivers we had to put up
with forty years ago because it was all we could afford, even if
they were never appropriate for ham use with the ham bands taking up a
quarter inch or so each on the dial, and the backlash for the tuning
was so bad that you had to tune out of the band before you could tune

back in.

That Grundig Satellite 700 that I bought a month ago for 2.00 at the Rotary Club sale was a great bargain, and at least it is halfway old enough to be a boatanchor. All those years of going to rummage and garage sales and never seeing a shortwave receiver, and this is the second Grundig I've found (and bought) in three years. I wouldn't really use it as a serious ham band receiver, but it sure beats a lot of junk from the old days.

I finally found my old relay box used for keying my amp. I did not find the paper sheet that came with it showing the connections. Three connections must be made, but there are five ports. I have hooked it up in what I consider to be the logical way, but my radio immediately returns to receive when keyed. I seem to remember a trick (alternate hook up) but do not wish to damage the radio via experimenting. I'm kind of goofy these days due to medications, so I don't trust myself to make the connections by intuition. I'm using an Ameritron AL-80A amplifier and a Yaesu FT-890/AT rig.

If someone could make a .jpg of this manual and email it to me via nm2k@arrl.net, I would appreciate it very, very much. Thanks.

Helpful post, Dale!

Okay, Howard, the G5RV in in it's many incarnations does need a tuner
for multi-band operations.

I recommend one of the MFJ 94XX series tuners. They are very inexpensive. The caveat is that you may have to tighten a screw down here or there to get it running perfect. MFJ does have a decent warranty, and return policy to it's credit. I am using a 949E tuner at the present time.

You might consider at some point going to a general purpose dipole, which is as much wire as you can hang - within limits, feed it with ladder line, and use the tuner.

But your G5RV, and tuner will do well for you.

I was responding to someone who said it did not provide filtering. Regardless,
an isolation transformer should have an electrostatic shield between
the line and output, cutting down electrostatic conduction. Any standard isolation
transformer
sold in the US must have the secondary tied to ground by NEC code.
In all cases, you are isolating the mains from the equipment. Even if one leg of
the output
is grounded, its still isolated from the mains. The problem is if you put your
body within the
chassis somewhere.

I also would have to say a TEST equipment isolation transformer is
really needed for GROUND isolation perhaps more so that mains
isolation.

Well I will try that but I have to add that I tried several Coax
jumpers, same problem, all other radios work fine on same antenna thru
same switches.
Now it seems to be just about permanent, in IC or ALC meter position,
the needle goes all the way to the right. I hate to say "pins" upon
mike key up:-(
I will try a Dummy load also!
tnx & 73....

Or you can follow this?
Relay box marked "TX" goes to amp relay terminal that keys the amp.
Relay box "red" cable connects to 13.8vdc on rig, "Blue" cable
connects to PPT line on rig.
Hope this helps?

Some radios like the FT-757GX have a "Linear switch" on the back that
needs to be OFF on a non qsk amp.
It is really a simple device, it needs 13.8 volts to activate the
relay, a ptt line sends this 13.8vdc to that internal relay, causing
it to close thus closing the relay line to the amp.
If these situations are satisfied, it should work unless a wire is
open, relay coil bad, etc!
Does the amp key up if you short out the relay line terminal on the
back of
the amp? I had a small microswitch in a cassette box with a wire
coming out. This wire had a RCA male plug & I used it to test all my
amps without even connecting it to a transceiver.

Mike N3LI
Thanks for the good advice.
I'm going to see about getting a MFJ 949E myself.
It sounds like a good choice for right now.
I don't see needing more than 300w power handling for awhile.
I can see how the built in dummy load will be helpful.
The price at Universal Radio Inc. is not going to stretch my budget to thin.
Thanks again for the help Mike.

Questions: HP 8640B signal generator . . .

Greetings all,

I picked up a used HP 8640B signal generator off of eBay. I have always wanted one, and now I have one.

Mine seems to work okay, but the tuning cavity only requires use of the clockwise most portion of its range. Much of the counter-clockwise range is just not needed - even though the frequencies seem to be okay. Is this normal? I have never used an HP 8640B before so I cannot say.

Also, I noticed that when I remove the top-most counter board (the board that contains the digital readout segment displays), I see a smaller compartment that contains the pre-scalar. Judging by the missing screws, and the overall appearance, it looks like there could have been a lid on that compartment. Was there in fact such a lid? Or, is this locations reserved for an option? Also, after removing the top lid from the unit, I see two strong "RF boxes" the smaller one, in the front, is the frequency counter (with the 7-segment readout as described above), and the other box, the big one in the middle right-most side (looking form the front), is presumably the frequency multipliers. Now my question is, behind these two boxes, is another (much smaller) open-lid box that contains a few plug-in cards. But when looking closely at this box, I see that it too might have had a lid. Can anyone say for sure if such lids were in fact present when the unit was new? If so, can anyone provide such spare parts?

Oh, and while I'm at it, can anyone say if it is possible to add option-002 (the frequency doubler option)? Can such parts be obtained - perhaps from a dead unit? Or am I better off just finding a unit that has the doubler option already installed and parting with my current unit?

Thanks,
- Stan Shankman

Hello Rich,

You can try http://groups.yahoo.com/group/IcomIC781/ , this is a
users-group and maybe you can get help there.
You have to be a member (free) to post your qeustions.

Tnx Hans;

I've joined es will present my problem there as most there are
familiar with the Icom 781.
Regards,
Rich WA2RQY/4

If I remember correctly the switch on the FT 890 is internal. Do you have
your Manual? Look through the manual it will tell you where the switch is.

Stan,

I can not answer your questions, but I would like to point out that there are numerous Operator and Technical manuals on CD for that signal generator available on EBay for only a couple dollars. You might consider buying one.

Time-Warner corporate is dropping usenet news as of June 23, 2008.

Please help by asking them to keep it. The person to call works for the TW president:

Barbara Burroughs
phone 203-351-2281

On a farm out in the country lived a man and a woman and their three sons. Early one morning, the woman awoke, and while looking out of the window onto to the pasture, she saw that the family?s only cow was lying dead in the field. The situation looked hopeless to her -- how could she possibly continue to feed her family now?'wow gold' (http://trv2china.com/aboust%20us.htm)In a depressed state of mind, she hung herself. When the man awoke to find his wife dead, as well as the cow, he too began to see the hopelessness of the situation, and he shot himself in he head. 'wow gold' (http://trv2china.com/contact%20us.htm)Now the oldest son woke up to discover his parents dead (and the cow!), and he decided to go down to the river and drown himself. When he got to the river, he discovered a mermaid sitting on the bank. She said, "I?ve seen all and know the reason for your despair. But if you will have sex with me five times in a row, I will restore your parents and the cow to you." The son agreed to try, but after four times, he was simply unable to satisfy her again. So the mermaid drowned him in the river.'wow gold' (http://wow-ffxi-gil.com/About%20us.htm)Next the second oldest son woke up. After discovering what had happened, he too decided to throw himself into the river. The mermaid said to him, "If you will have sex with me ten times in a row, I will make everything right." And while the son tried his best (seven times!), it was not enough to satisfy the mermaid, so she drowned him in the river.'wow gold' (http://wow-ffxi-gil.com/Contact%20us.htm)The youngest son, woke up and saw his parents dead, the dead cow in the field, and his brothers gone. He decided that life was a hopeless prospect, and he went down to the river to throw himself in.And there he also met the Mermaid. "I have seen all that has happened, and I can make everything right if you will only have sex with me fifteen times in a row."The young son replied, "Is that all? Why not twenty times in a row?"The mermaid was somewhat taken aback by this request. Then he said, "Hell, why not twenty-five times in a row?" And even as she was reluctantly agreeing to his request, he said, "Why not THIRTY times in a row?"Finally, she said, "Enough!! Okay, if you will have sex with me thirty times in a row, then I will bring everybody back to perfect health."Then the young fellow asked, "Wait! How do I know that thirty times in a row won?t kill you like it did the cow?"

I am a fancier of the TS-830S transceiver and am searching for some
historical facts..Anyone know how many were produced,Or,first and last
serial numbers..I think they were first produced in August ,1980 and
last advertised about July of 82 looks like about Two years of
production ..Thanks   Harold W4PQW

My bet is the caps are cheap and go bad. I get wall worts for a buck at the thrift store so it's just a matter of swapping out the bad ones. It takes a hammer to get into them so there is nothing serviceable except the connector.

If you go the route of daisy chaining from your main supply beware you may have common mode issues on some bands.

Another idea: get back on the air, start nets, call nets, become active on the air, encourage others to do the same. Flush all the commercial interests and get back to 100% ham radio content; live, real reality, commercial free, organic, and healthier for your brain and healthier for our wallet.

I keep saying I'm going to do just that, Richard, but I get side tracked
when on the internet and never get around to turning the radio on. <G>

I'm not aware of any Wi-Fi radios that also have AM, but Wi-Fi radio
that also have FM have been a bit of a rarity up to now anyway.

Have you checked whether the AM station you want to listen to has an
Internet stream?

Someone has a US patent on the combining of regular radio stations and what is now called Internet Radio.

Either the manufacturers licensed the patent, worked around it, or ignored it (decided not to sell their unit in the U.S.).

Geoff.

Hello,

What is the current thinking of which radio is currently the best for weak signal VHF / UHF DX working ?

Any one care to comment ?

And your point is ?

I know I posted the same question recently, recived only 1 reply stating I
had posted in RTF - which was a mistake on my part
I have checked on my server and can no longer find the post or any connected
thread so have poised the question again.

So what do you use for weak signal DX on VHF / UHF then or ar you not
interested in radio ?

------------
```

Before I left NJ, USA in 98, the activity on VHF/UHF had nearly disappeared, except for a few diehards with their own repeaters. I hardly ever heard anyone on USB or CW on six meters, two meters and upwards.

Now that I'm down south in GA, near Chattanooga, TN, it is the same way. Ten years later and no rise in activity on VHF/UHF. It's very disappointing for me. I enjoyed the higher average IQ of the operators that I used to find on VHF/UHF.

I presently own a Yaesu FT-847 and a few single band radios for VHF/UHF. A Yaesu FT-690R MII, an ICOM 229H (actually a couple) and an el cheapo 220 MHz rig, whose brand I can't remember. There is a fair amount of activity on 220 MHz down here, but it is all via repeater.

Ed, NM2K

Yes, your question appeared on 15 June. There were several replies (and
none of the usual crap).

Maybe you are having the same problem which I get occasionally, where
some postings fail to appear or, if they do, show up as 'expired' (a
black dot with Demon's Turnpike threaded structure). This sometimes
happens even with my own postings, even though I have set the expiry
time for most NGs to 8 days.

If I suspect that some interesting postings are missing, I can usually
retrieve them by re-setting the collection time for that particular NG
to a few days ago.

Probably not the radio, but having a good preamp at the antenna.

Most areas have so little activity that selectivity is not that much of an issue except maybe two weekends a year for the contests. The noise floor should be set by the preamp near the antenna.

The best is a high quality HF radio (K3, Orion-II, FT9000, IC7700, 7800) followed by a
DB6NT transverter. Or even nicer: a SDR with transverter. There are not many serious
radio's left with VHF/UHF. Only one I know of is the IC910H. I am still using my trusty
FT736 and am having a ball with it... If you can find one - or something else especially
with a Mutek go for it!

But since you are in G, check and ask on the ON4KST website www.on4kst.com/chat and select
the frequency your interested in. Often between 100-200+ stations per band chat Ask for
some opinions there.

No VHF/UHF is not dead but it has definitely changed in the past 6 or so years...

I've seen a lot of fit, slim, healthy and trim folks pass on in my 62 year life. And not from car accidents, falling, electrocution, car crashes or plane crashes. It seems that the active folks are actually worriers, more so than we portly folks.

One thing I do know for sure is that after smoking for 35 years, quitting was a mistake. The damage was already done to my body. The weight that I gained after quitting has brought on myriad problems that I did not have before, such as diabetes, high blood pressure, diabetic neuropathy, etc. Had I just kept on smoking, chances are I would have been much better off.

If you don't smoke, don't start. If you do smoke at a good clip, think twice before quitting. Had I to do quitting again with what I know now, no way would I have done so. This is my seventh year having quit smoking. Now I have this cotton picking seven year record to maintain and improve upon. And over one hundred pounds of blubber to tote that I didn't have before I quit smoking. I don't care what the doctors say. Being slim and smoking is lots better than being a non smoker, but fat.

Now we need to arrange some lynching parties for the bastards that began
taxing cigarettes at a ridiculous rate.

Ed Cregger

Check CCrane, they have several wi/fi radios on their website for
sale.

Has to be longer than that, I pruchase the TS-530S (the TS-830S was readily
avaialble) in the fall of 1983.

DEAD some say, then you are not trying.

Here in EL99 I/ we have a 2m SSB net every Wednesday at 0100z or 8pm local. 144.250   http://www.swotrc.net/

Then on Thursdays the Florida Week Signal Society has a 432.100 at 0130z or 8:30. http://flwss.net/ These guys are avaiable upto 10gz!!!

I myself use a ICOM 820H but have used in the past a FT726 and FT736. I know of operators whom use Ft-847 with good results (as long as the SWR does not trip out on that particular radio). the Ic-910 with the 1.2g is a decent radio.
My plans are to finish installing my 222 transverter and 900 radio, then it 1.2g 2.4 and up!

A GREAT source of transverters is Down East Microwave.
http://downeastmicrowave.com/
Coupled with a 756pro3 using the band scope is the ultimate in my opinion.

Antenna mounted preamps are nice but a better use of $$ is in the hardline, not coax and good antennas, not cushcraps.
http://gulfalphaantennas.com/
http://www.directivesystems.com/antenna4.htm
http://www.yu7ef.com/   I built his 9el out of spare parts and it works great!!!

You think UHF/VHF SSB is dead, just check the scores of the June QSO party. 6m did dominate but I had more QSO on 432 then 2m.

1 -Yeasu VX-7R Black Quad Band HT with Extras, Excellent Condition,
Virtually New in the Box

This is a totally unused black VX-7R that I bought at a local hamfest the beginning of this year. I have a bad habit of buying these at the hamfest and then never using them. I charged this one up and played with the buttons for about 15 minutes and thats the total of its use to date. I am always so excited about these things at the hamfest but then I loose interest and they sit around gathering dust. So I might as well pass it along to someone that will give it a good home and actually use the thing. It is in perfect, new in the box condition with all the original packaging and manuals. It also includes the computer cable and software to program the memories and such as well as the soft case made for it.

Below are exerpts from the Yaesu website that describe the features and functions better than I could.

The Yaesu VX-7R is a triple band (6M, 2M & 440 MHz) HT with extensive receive coverage, and leading-edge features. The American version even transceives with 300 mW on the 220 band. Power output on 6 meters, 2 meters and 440 MHz is 5/2.5/1/0.5 watts. It receives the AM and FM broadcast bands, shortwave (AM), VHF and UHF TV audio, VHF Air and public service frequencies. This new model features a rugged magnesium case with rubber bumpers and gaskets. It clearly sets the standard in ruggedness, versatility and water resistance. It is actually submersible (3 feet for 30 minutes). There is even an optional submersible speaker mic (not included).

Other features include: magnesium case, 24 hour clock, 900 memories, changeable icons, severe weather alert, and multicolor LED strobe. The VX-7R also has an Internet key to access the new WIRES? system. At only 2.5 x 4 x 1.2 inches it will go with you everywhere. Hikers and mountain climbers may connect the optional SU-1 Barometric Sensor for direct air pressure readings. The VX7R comes with SMA Dual Section Antenna, FNB-80LI Lithium Ion Battery, NC-72B Battery Charger, Belt Clip and Wrist Strap.

2 - Mio Digiwalker C520 Widescreen GPS Unit With Extras, Excellent Condition

This is a really nice widescreen automotive GPS unit that works great. I have used it for about a year both locally and on various trips and it has come in very handy at times. The user interface is very easy to use and the routing function is very fast, even midtrip reroutes are quick. The only reason I am selling this is I got a tomtom and I don't really need two units. Along with the normal routing functions this unit will also play mp3 files, show picures and play videos. Great when you are stuck somewhere waiting. It has an internal rechargable battery so you can use it handheld outside the car. It also has bluetooth connectivity both for hands free use with your bluetooth cellphone and for wireless stereo audio via bluetooth headphones (not included).

Included with the GPS is the mio power / audio cradle that allows easy mounting and removal from your car. No more cords to plug in, all connections are made via a contact along the edge of the GPS. It also has an amplified speaker that boosts the soud output from the GPS, good for driving with the windows down. I am really missing this bit with my new tomtom, I almost decided to sell it instead. I will also include an alternative suction cup mount for more flexibility in window mounting. Last but not least is aremote agnetic unt gps antenna to allow maximum flexibility in the mounting for the gps. Everything in is excellent shape and works perfectly. Includes the original box, packaging, software and manual.

3 - Vexplorer Remote Control Robot Kit

This is a virtually unused Vexplorer ready to build in the box. It is in excellent condition and everything works perfectly. It even has a second set of small hardware (screws, nuts and such) that is unopened in case you misplace something. This would be a great project for a parent and child to build, I know I would have loved it when I was younger. I originally purchased it with a specific purpose in mind and it was a little smaller than I had hoped so I am selling it so that someone else can enjoy it. Any of you parents out there that had an erector set as a child will be right at home with this. You can even buy add on parts to increase it functionality. Some of the pictures below are from the web site since mine is unassembled and still in the box. Check out Vexplorer Website <http://www.vexrobotics.com/vex-robotics-vexplorer.shtml>

23.05.2008 Aamusta asti on syydetty h�t��ntyneelle kansalle kas vihnett� vallattoman toimivaa mehil�istuhojippoa. Juu ilmeisesti h�t��ntyneet kansalaiset ovat jo viikojen ajan tukkineet puhelinlinjat tivaten syyt� siihen , ettei p�lytt�jist� ole koko maasamme harmainta hajua miss��n. Ja koska edes mehil�isliitto en�� jaksa keksi� mysteeriin en�� virannomaisiamme ep�ileville kysejille mit��n haluttua selityst� alkaa YLE syyt�m��n omaansa. Ei nyt ei kelpaa punkit, ei tekaistut virukset. Ei edes kiinalaiset sokeriruokintaliemimyrkytykset. Ei edes geenimanipulointi tunnu kansamme kauhua laannuttavan. Kuten muistamme jo pitk��n tiedetty TODELLINEN s�teilyionisaatiop��st�fakta harhauttajana on ehdottoman kiellon tabu.

Nyt on siis ydinhallintomme kehitt�nyt, etten sanoisi nerokkaankivan selitteen �idin, kaikkien ydinvalheiden kuninkaan syv�luotaavan neronkiivauden laattalentojen likaisenharmaan kuninkaan. Ja kuten ydinalallamme on tapana ollut massasyyd�ll� jopa kaikkein typerimm�n arvellaan uppoavan kansan aivotursoon. "Kylmyys on syyn� muka mehil�isliiton tunnustamaan jopa -90% todettuun mehil�iskatoon menneeseen vuoteen, t�h�n- ja viel� tuleviin kymmeniin kesiin!" ..? .. ��.. ..? ..Noin hienoa tiet�� ett� vaikka jo +8C l�mm�ss� iloisesti lentelev� amppari puuttuu jo pitk��n +23C kes�p�ivist�mme niin nyt saatuani "ns. virallisen selityksen ydinhallinnoltamme" nukun kuin murmeli tulevat ydinkauhuvuosien y�t punasateitten rummuttaessa henke� viel� kituvista biotoopeistamme koko s�teilyionisaatioitten vuosikymmenten kertymien raivolla. HIENOA!(

PS. Ja kauhistellen j�lleen uuttta TVO/Fortum/Posivan:n ydinvoimalamasiivien tritiump��st�jen ja (440kpl k�yt�ss� nyt) maailmaamme tuhoavien ydinvoimaloitten syyt�mien raskasvesitritiump��st�jen ja k�siin r�j�ht�vien beettasoihtujen uhreja my�s el�imist�ss�mme. Jo pitk��n on ollut tiedossa, ett� ydinvoimaloiden 360-kertaistuneet radioaktiiviset tritiumh�yryt yms. tappavat massoittain n�iss� lammikoissaan suojatta kutevaa sammakkoel�imist��. 23.05.2008 on julistettu maailmanlaajuiseksi sammakkoel�inten KATASTROFIJULISTUSP�IV�KSI!.. ..Mit� t�ss� jatkuvassa ydinaavikoitumistuhoterssiss� osaa en�� sanoa rakkaat lukijani? Niin olen min� n�ist� Einsteininkin ennakoimista faktoista oppia antanut m��r�� karsastamatta? .. Ehken tarpeeksi, mutta nyt tilanne alkaa olla sellainen, ett� meid�n JOKAISEN on kertakaikkiaan pakko tehd� omakohtaiset ratkaisut! Kannattaako alati etenev�� ydinteurastusta vai vastustaakko sit� luonnon mukana? Yht� kaikki arpa on heitetty. Ydinvoima L�HTEE!.. En�� luonto kysyy mielipiteen��n asiasta vain yhden kysymyksen. "Ihmiskunnan kanssa, vai ILMAN!?". .))))

BANG! Maailmankaikkeuden historia./Neutriino.
Neutriinot ovat pieni� ja hyvin kevyit� hiukkasia. Niit� syntyy ydinfuusiossa, jotka toimivat t�htien (esimerkiksi Auringon, perusydinvoimalan) energian l�htein�. Useiden vuosien ajan neutriinojen oletettiin olevan massattomia, mutta nyky��n tiedet��n ett� niill� on pienen pieni massa, tosin liian pieni pime�n materian ongelman selitt�miseen. Massan olemassaolo ratkaisi pitk��n mieli� askarruttaneen "neutriino-ongelman", jonka mukaan havaitsimme v�hemm�n neutriinoja Auringosta kuin teorian mukaan olisi pit�nyt. Pieni massa antaa neutriinon vaihtua kolmen olomuodon- elektronin, myonin ja tau-neutriinon- v�lill� sen tullessa Auringosta maahan.

*T�ss� on siis keskeist� tajuta, ett� kvanttiydinfyysikkojen neutraaliksi "aiemmin v��rin" ilmoittama ydinvoimalatehokadon 17% neutriinos�teily ymp�rist�biotooppin on my�s potentiaaliltaan siis yll� mainitusti elektronis�teily�. Ja kuten on syyt� tiet�� elektronis�teily tunnetaan paremmin ns. beettas�teilyn elektronituotoksena! J�lleen huomaamme miten h�rskisti ydinala valehtelee aiheesta. Ydinvoimalassa mittareissa n�kym�t�n neutriinos�teily l�p�isee kaikki s�teilysuojat se sen j�lkeen muuttujana synytt�� ��rimm�isen tuhoisaa beettas�teily�. Toki sen lis�ksi, ett� neutriinon osuessa protoniin syntyy 1 000 000eV gammaterssi my�s.

Aiemmat havaintolaitteet pystyiv�t havaitsemaan vain kaikkein kevyint� tyyppi�. Neutriinojen ilmenemismuotojen lukum��r� voidaan ennustaa alkur�j�hdysteoriasta. Samalla haastetaan tiukasti teoria, jonka mukaan maailmanmkaikeus alkoi kuumassa tihe�ss� tilassa.

Neutroni.
Atomiytimet koostuvat kahden tyyppisist� hiukkasista, neutroneista ja protoneista, ja n�m� molemmat hiukkastyypit taas koostuvat kolmesta kvarkista. Neutronit painavat melkein yht� paljon kuin protonit, mutta ovat varauksettomia. Supernovar�j�hdyksen ��rimm�isiss� olosuhteissa protonit ja elektronit voivat yhdisty� ja muodostaa neutroneja, jolloin kuolevan t�hden ytimest� syntyy tihe� neutronit�hti. Neutronit�hden maksimimassan oletetaan

olevan noin kahdeksan Auringon massaa: t�t� suuremmat luhistuisivat mustiksi aukoiksi.

Got curious myself since I liked mine so much. Found this web page from SK
that says "introduced in 1977"
http://w4ti.net/ts-830.html

On the TS-520_820_530_830 Yahoo Group a Kenwood tech was quoted "about 1979 - 1981". I thought I had a Ham Radio magazine from 1983 with the Gold model but I can't find it now. Others swear it was available as late as 1987. Please share on any info.

I got mine in 93' after another gent suffered Field Day trauma from a newbie operator. One of the 6146b tubes actually had a sucked-in envelope! I bought it for $250 with the VFO-230 thrown in. All it needed was a 12BY6 and replacement shaft coupler for the band switch, made from drilled Teflon rod tapped for set screws. I used this radio for the next several years with the same finals at full output (>120 WPEP) in CW/SSB and even in RTTY service with the mic gain reduced for 70 Watts out.

I sold it 2 years ago anticipating a move. I kick myself now.

Let's see..10,000 plus comments and a 97.4% approval. If I were a large
or small scale seller I'd be tickled to have such a rating.

Obviously, you don't know ebay. Give one bad report and your account is
toast. radiomart's practices are well documented and quite googleable.

Excellent source. Had the other gent simply used the same tact I would
not have made a comment. We all learn every day.

I bought one of the first in the UK at the Granby Halls Radio Rally in
the summer of 1981, it's still in daily use today.

The transceiver that will arrive on your doorstep will have no resemblance
to what you bid on.  Trust those who provide a warning to you, they speak
the truth.  Many have been burned.
Feedback below 99% is a big warning flag, because many who are disappointed
do not leave feedback because until recently he was able to retaliate with
negatives.  To see what I mean look up the feedback ratings on anyone who
left him a negative and you will see their record is tainted by a Radio Mart
negative.  A very nasty seller.

Still, 10K sales is a lot of stuff sold.
Even the best intentioned/honest seller can miss something every once
in a while.
Besides, some buyers can be a real PITA:-)
I suggest taking a look at his prior sales & see how much he got, for
what & the feedback for same.
I think Ebay changed their Feedback Policy to prevent sellers from
holding poor feedback over the heads of buyers.
Also with PayPal required in the Consumer Electronics (ham stuff,
used), a buyer can retrieve his/her monies if an auction is bogus or
deceiving. At least thats what I hear, PayPal is for the buyer, not
the seller.
According to Ebay/Paypal, Paypal can hold the sellers monies for 21
days or until positive feedback is given.

I had one dealing with, it almost turned out bad but didn't. I will never
deal with him again. I just don't trust him.

Oh my God! must be a Democrat. "Give poor Radiomart the benefit of the doubt."

The SOB should be BANNED from Ebay, and prosecuted for fraud. His number of
sales is only a testimony to the stupidity of the average Ebayer.

Please, by all means, bid on the rig, and see what it's like.

This guy likes to be anonymous, e-mails people off line who make any
comment, one way or the other!
You're a real Winner;
Where did I say to give anyone the benefit of the doubt.
I merely made a remark how I see things and how to protect yourself
with paypal, read my above reply with both open eyes already & stop
whinning.
Tnx but I already have a KWM-2, not bought or overpaid like on Ebay.
You must be stupid to pay big bucks for a pig in a poke anyway!
Rich

Hi my name is Ernie,

My Icom 751 is dead , no power output. I checked it with a swr/watt meter conected to a dummy load and also conected to a swr/watt meter to an antenna. I replaced the recieve board and got the receive working great.
This rig was given to me by my best friend and its my first HF rig.
Can you help, also I could really use a schematic.

```
Thanks Ernie,  KC7BYD

Why don't you call Scott Malcolm in Toledo, WA
Probably one of the better technicians in NW USA to work on classic Icom
radios.

Ernie,

Fear not!  It is simply a dead battery on the "RAM Unit" memory board.
Icom figured the 10 year battery would be time enough to buy another
new Icom radio.  Unfortunately, it is not as simple as replacing the
battery, for the radio is now brain dear.  Check this link:
http://www.willcoele.com/radio_repair/index.html#MEMORYREPAIR
For about 50 bucks it will be as good as new - no, better than new
because it will cover 60 meters, and you don't have to send the radio.
You pop out a small circuit board and mail it to him.

Good luck and 73.  Maybe we'll catch you on the air with my 751.
```

I noticed the same thing going to church. There were a lot of Hams at that church. I see a lot of Hams walking around downtown too. I didn't know that so many people were Hams!

The WiFi transmitter in my Actiontec GT701-WG produced interference over
much of the HF spectrum and completely obliterates the 17 meter band.
With my HF receiver in AM mode, looking at the received audio with a
spectrum analyzer, I see peaks at 60Hz and 120Hz. The router and WiFi
portion work just fine.

Anybody ever run into a problem like this and found a solution to it?

I can eliminate the noise by disabling the radio in the router, but a
real fix would be preferable.

That reminds me.....

For years we've been force fed about how we have to eat right, not smoke, etc. How the obese ans smokers and heavy drinkers were going to be a healthcare disaster.

Apparently that stuff takes an average of 4 years off our life. People who live the proper life will live around 4 years longer on average.

But the kicker is this:

When they got the stats on relative life expectancy, they found the causes of death. Those obese and smoking and hard drinkin' jerks tended to have a quick end, while the righteous proper folk tended to have long debilitating ends.

My Mother-in-law didn't smoke, didn't drink, and spent the lat 8 years of her life as an dementia patient in a nursing home. I cringe every time I think of that happening to me.

The problem with lengthening our lives is that any gains we make are at the wrong end.

Some thoughts on the wisdom above: all those articles citing studies involving statistics benefit not you, but i) the newspaper reporter making his wages for doing this, ii) the medical school professor getting the grants to do the work (including pay his/her salary [i.e. the school gets its staff for free]), and iii) the bean-counter actuaries who work with the insurance companies figuring out what premiums to charge you based on any factors that significantly affect the mortality curves.

No doctor can plug into you any "voltmeter" (or cholesterol meter, or weight meter, etc), and tell you because of X, YOU're going to live N more days. You can calculate satellite orbits, miles of gas left in your car's gas tank, and minutes of light left in a flashlight with considerable accuracy, but in a biological animal, you can't make those kinds of predictions unless you're talking about death being caused by bleeding at high rates or you're in the middle of suffering a hearth attack or the likes of that.

Now, enjoy the rest of your life as best you can (ice cream, booze, don't smoke tobacco around me, etc) and consider that if you agonize too much over things, then those visits to the psychiatrists will cut into your entertainment budget AND you will be more unhappy.

>The WiFi transmitter in my Actiontec GT701-WG produced interference over much of the HF spectrum and completely obliterates the 17 meter band. With my HF receiver in AM mode, looking at the received audio with a spectrum analyzer, I see peaks at 60Hz and 120Hz. The router and WiFi portion work just fine.

That's distinctly puzzing, from a frequency point of view, since the WiFi frequency is far above HF, and the 802.11 protocol tends to use a beaconing / timeslicing which isn't tied to the powerline frequency cycle.

>Anybody ever run into a problem like this and found a solution to it?

Consumer-grade networking gear is notorious for generating QRM. I haven't seen this specific symptom before.

>I can eliminate the noise by disabling the radio in the router, but a real fix would be preferable.

I could imagine several paths for the interference:

- The presence of 60 and 120 Hz sideband spacing suggests that it may be power-supply related. Possibly, the enabling of the radio is raising the WAP/router's current consumption beyond what the "wall wart" is capable of delivering. If the DC voltage supplied by to the router were sagging 120 times a second, it might generate all sorts of interesting QRM... and this might be leaking out of the cabinet directly, or coming back out along the power cable. Or, perhaps, a switching-supply wall wart might be emitting QRM directly under conditions of high (but acceptable) current load.

- There might be QRM RF coming out to the WiFi antenna... but that's a pretty good approximation of an infintesimally-short dipole/monopole at HF and wouldn't radiate efficiently.

- The QRM might be coming from the radio itself, but leaking back out through other paths... onto the Ethernet cables or the power wiring.

I'd tend to suspect the power supply, and QRM leakage back out into your household AC wiring... that'd be a much more efficient path than emission out of the WiFi antenna.

As to specific examples: I've chased down QRM problems involving two different pieces of consumer Ethernet / wireless gear.

One was a buzzy QRM which wandered around the whole 2-meter band, and was bad enough to get in on the squelch tails of at least two repeaters located miles away. The cause was a 10/100-megabit hub which was "singing" loudly - I believe it was probably a harmonic of one of its on-board clock oscillators. The QRM was apparently getting out into the external power wires and external Ethernet cables (common-mode, I assume) and was being re-radiated efficiently. Replacing the switch with one of another brand fixed the problem.

The second was a a set of closely-spaced (some kHz apart) spurs throughout the 2-meter band, strong enough to open the squelch on an HT or scanner. These were coming from the switching DC-to-DC converter inside a wirelss router/switch (one of the Netgear grey-plastic varieties). They seem to have been radiating directly out from the PC board, as they were strongest with the probe closest to the chassis, and did not appear to be leaking out through the DC cable to the wall wart. The router had some ferrite beads and cap bypassing for the DC input. Replacing the WAP/router with a different model fixed the problem.

If your router is of a fairly recent vintage, it was probably supplied with a switching-type DC supply... I think a lot of the cheaper ones can be prone to be HF-noisy. You might want to consider finding an old linear-type (transformer/rectifier/caps) supply with the same output voltage and equal or better current capacity, and see if that makes the problem go away.

Other possible technical fixes: wrap the DC power cord through a clamp-on ferrite a few times, as close to the router as possible; figure out how to construct a high-pass filter for the router's antenna connection which will pass signals above 2 gig and block signals below that.

If all else fails, replace the router with a different brand.

Well without doing a proper statistical study, there's no way to be sure.

Just looking at people in the stores around here, it looks like the average
population is about the same as the hams (accounting for the age bracket
bias).

Of the people that I personally know that are over 50, I could count the
one's that are not overweight on the fingers of one hand.

No, all of that was about the chrome-knobbed Heathkits.

I was thinking of the Heathkit "Commanche" mobile receiver,
and the matching "Cheyenne" transmitter, both of which were
AM.

Try feeding power to it from a battery source, rather than the wall wart
that comes with it. See what that does for it.

Yes I see them everywhere too: grocery store, Wal-Mart, Target, the mall.

Michigan has one of the highest rates of obesity and overweight in the country.

I was thinking same thing. He has a swiching wall wart that responds to
the current draw when the WiFi TX is enabled.

I thought the 1990s Japanese radios looked a lot like Yamaha stereo
receivers.

I like my IC-7700.  Excellent performance, appearance, functionality,
and build quality.

One other responder suggested to try battery power to see if it is a problem in an ac to dc power supply, but otherwise a lot of electronic deviced these days spit out all kinds of hash, noise, spurious emisions all up and down the RF spectrum. I have had problems with computer emissions getting into receivers, and very often weak to strong diode noise getting into my receivers. Sometimes you can add bypass capacitors, inductors, and sheilding (metal foil around the device and then alligator-clipped to a ground, or the ground hole in a three prong AC line power outlet plug) to cut down on this. Good luck otherwise.

Hello all.
An acquaintance not in this group has listed the above item on eBay #
250257132347.
This RF milla Wattmeter is a complete unit including sensors 4E & 6E, 20 dB
pad, cables & manual all in a fitted carrying case.
Thanks for the read.
Larry

Doing some further web surfing:

Depending on what site you visit (here's the one I used:
http://www.nclnet.org/news/2007/obesity_survey_06192007.htm)

Approximately 66% of Americans are overweight to obese
Approximately half of that group (or 33%) of Americans are obese to morbidly obese.

So it is not unique to hams. I think we see it more in hams simply because the average age is higher and the bad habits that lead to overweight and obesity have had more time to do their work.

Too many people deceive themselves too with "I'm just big boned" and all those arguments. Well the healthy BMI has sufficient range to accommodate the big boned. If you can't see your collar bone when you look in the mirror nude, you are overweight.

Dee

Exactly my problem with a Wirespeed DSL modem.  Cheap wall wort would spew
all over the spectrum after a few minutes under load.

That doesn't mean that there's not a higher percentage among amateur radio operators than the general population.

|
|James is correct... that the RF clipping technique is somewhat more
|effective. What he fails to mention is that it's more complex... and
|not easily installed into an existing radio. RF clipping also
|exihibits substantially more distortion. The VoiceMax installs
|easily... and provides tangible results.
|----------------

Actually as easy to design an RF Clipper as an audio compressor. True
it is a bit more difficult to install. Audio clippers can be external
to the transmitter and simpler to install and operate. A RF Clipper
will install as easily as your internal audio compressor.

Personally I would take RF clipping over Audio compression any day
with SSB transmissions. If the post filters are good in enough RF
clipping, there is not significant difference in distortion.

james

Totally agree with you. Another important point (for me
at least) is rigs of the past were repairable. No longer the
case IMO.

Thats why my main rig is a Kenwood TS-830S, and
my stereo rack is full of 1970's silver face Pioneer equipment.
And yes, it all works!

Steve

We=92re a video game specialist and wholesaler for modded consoles, retro consoles and game backups, we ship worldwide. Below are some of our offerings at wholesale prices. For any enquiries, please feel free to contact us at gamersparadisemy@gmail.com

Sony Playstation 3 - 40GB Pack (NTSC/U & NTSC/J versions available)
comes with two dual shock 3 controllers and Hori cooling fan.
USD 350 (with worldwide shipping)

XBOX 360 Elite (with HDMI)
=96 120GB Pack (NTSC/U & NTSC/J) comes with two controllers and Nyko cooling fan.
Modded and able to run XBOX 360 backups, homebrew softwares and able to go online via XBOX Live.
USD 400 (with worldwide shipping)

XBOX 360 Premium (with HDMI, free 2 ori games, Forza 2 and Viva Pinata)
=96 20GB Pack (NTSC/U & NTSC/J) comes with two controllers and Nyko cooling fan.
Modded and able to run XBOX 360 backups, homebrew softwares and able to go online via XBOX Live.
USD 330 (with worldwide shipping)

XBOX 360 Core (without HDD and HD cable, only composite video)
=96 (NTSC/U & NTSC/J) comes with 1 controller.
Modded and able to run XBOX 360 backups, homebrew softwares and able to go online via XBOX Live.
USD 260 (with worldwide shipping)

Nintendo Wii - (NTSC/U & NTSC/J) comes with two controllers and Nyko cooling fan.
Modded and able to run Nintendo Wii backups and homebrew softwares.
USD290 (with worldwide shipping)

Sony PS2 - (NTSC/U & NTSC/J) comes with two controllers and Nyko cooling fan.
Modded and able to run PS2 backups and homebrew softwares.
USD140 (with worldwide shipping)

Sony PSP with 4GB MSPD
Able to run PSP backups and homebrew softwares.
USD180 (with worldwide shipping)

Nintendo NDS Lite with R4 (2GB MiniSD card included)
Able to run NDS backups and homebrew softwares
USD180 (with worldwide shipping)

*** Remarks: All modded consoles come with 5 backups of your choice whereas for portables, they will come with 5-10 preloaded games of your choice on the memory card.

--=

XBOX 360 / Wii / PS2 Backups,
USD2 each (dvd-r), USD3 each (factory pressed gold disc) =96 minimum order of 10 games needed.

NDS / PSP Roms
USD2 per game, burnt on dvd-r, USD5 for any 3 games burnt on dvd-r

--=

Used Retro Consoles, Original Games & Backups
(Please email us for the best price, we have many used retro consoles and games in stock, all in perfect condition, sourced from Shibuya, Japan)

Neo Geo Cart (Original Games Only)

But I was under the impression that RF clippers only work on SSB?...
and the installation involves tearing into the IF section?

Thanks for the suggestion about the power supply.

I'll be cobbling together an appropriate cable to feed the modem from a
stiffly regulated analog supply. If that works, I'll just build a little
supply to replace the wall wart.

The compression ratio of VoiceMax is fixed at 15:1 with distortion
levels well below 1%.
I suggest you read this for clarification... http://en.wikipedia.org/wiki/Au=
dio_level_compression

That seems to be it.

I powered the router from an Astron RS-12A and the interference was gone.

Don't know if the wall wart itself is the source of the problem or if it drops output under load and causes the router to misbehave, but it's an easy enough fix.

|
|But I was under the impression that RF clippers only work on SSB?...
|and the installation involves tearing into the IF section?
|--------------

Correct. An RF clipper an be inserted after the SSB filters or before.
There are versions that do the clipping after the balance modualtor
and before filters. Sherwood did a RF clipper for the Drake TR4 that
was after the SSB filters and had crystal filters to restore the
original bandwidth.

Generally RF clipping is a bit more expensive than audio compression.
Then you get what you pay for.

james

Hello and thanks for the read.

After my previos posting for a copy of the manual, I now have the manual.
Evidently, there were several loose schematics as part of the manual which
weren't available with this manual. Within the manual was a referral to 2
sheets of schematics for Synthesizers and 2 sheets for RF Filter and
```

Bandswitch. There may have been more.

If anyone has these schematic sheets, I would gladly pay for the copying and postage plus any other reasonable costs that are part of getting these copies made.

Thanks you for your consideration. Larry

|What is the dB advantage of this vs. RF clipping for SSB?
|
|
|----------------------
```

RF Clipping is superior to audio compression in SSB transmission. RF clipping will provide about 6dB improvement over audio compression alone.

james

I thought that there were some stand-alone RF clippers. Surely there is
no reason why they cannot be external units, inserted in-line between
the mic and the mic socket (ie audio in - audio out)?

Obviously they have to contain 'all the works' (oscillator, balanced
modulator, compressor, clipper, filters, balanced demodulator etc), but
at least they are self-contained and universal.

Regarding filtering, the main advantage of RF clippers is that they
eliminate the effects of second-order distortion, and only have the
distortion produced by in-band third order intermodulation. For
cheapness and simplicity, if you leave out the SSB filtering (ie do
everything at DSB), you will have at least twice the number of in-band
IM products. But how much worse is this than having SSB filtering?

Attend any of our local frequency coordinators meetings and look for
yourself.  I exclude the swap meets because there are many
non-amateur-radio-licensed individuals that attend in addition to
licenseholders.

At least Datong made a stand-alone unit. There was an article about
RF-clipping and the Datong unit in Wireless World a few decades ago.

I doubt you'll find that lower voltage is the culprit, if my personal
saga with noise is any indication... ALL of my noise problems were
traced to various cheapie wall warts (mostly switching type) included
with various cell phones, net switches, cable modem, etc... and each
worked just fine over a fairly wide voltage range when connected to a
good analog lab supply.  In each case, they tended to just cease
functioning at some point as the voltage dropped, and I didn't get any
broadband noise from them any place in the testing cycle.  Plug the wall
wart back in, and some even put out nasty broadband noise with little or
no load, though all of the offenders put out plenty of hash at full
```

load, even using a purely resistive load and an electronic load I happen to have left over from power supply development days.

It was an easy task to put together a decent but cheap analog power supply with a few 3 terminal regulators to power the devices in question, and all of the hash was gone (for awhile). I don't exactly know how, but a few of the things somehow crept back into the house, and it's time to go on another extermination binge for the wall warts again...

Good Luck...

We=92re a video game specialist and wholesaler for modded consoles,
retro consoles and game backups, we ship worldwide. Below are some of
our offerings at wholesale prices. For any enquiries, please feel free
to contact us at gamersparadisemy@gmail.com

Sony Playstation 3 - 40GB Pack (NTSC/U & NTSC/J versions available)
comes with two dual shock 3 controllers and Hori cooling fan.
USD 350 (with worldwide shipping)

XBOX 360 Elite (with HDMI)
=96 120GB Pack (NTSC/U & NTSC/J) comes with two controllers and Nyko
cooling fan.
Modded and able to run XBOX 360 backups, homebrew softwares and able
to go online via XBOX Live.
USD 400 (with worldwide shipping)

XBOX 360 Premium (with HDMI, free 2 ori games, Forza 2 and Viva
Pinata)
=96 20GB Pack (NTSC/U & NTSC/J) comes with two controllers and Nyko
cooling fan.
Modded and able to run XBOX 360 backups, homebrew softwares and able
to go online via XBOX Live.
USD 330 (with worldwide shipping)

XBOX 360 Core (without HDD and HD cable, only composite video)
=96 (NTSC/U & NTSC/J) comes with 1 controller.
Modded and able to run XBOX 360 backups, homebrew softwares and able
to go online via XBOX Live.

USD 260 (with worldwide shipping)

Nintendo Wii - (NTSC/U & NTSC/J) comes with two controllers and Nyko
cooling fan.
Modded and able to run Nintendo Wii backups and homebrew softwares.
USD290 (with worldwide shipping)

Sony PS2 - (NTSC/U & NTSC/J) comes with two controllers and Nyko
cooling fan.
Modded and able to run PS2 backups and homebrew softwares.
USD140 (with worldwide shipping)

Sony PSP with 4GB MSPD
Able to run PSP backups and homebrew softwares.
USD180 (with worldwide shipping)

Nintendo NDS Lite with R4 (2GB MiniSD card included)
Able to run NDS backups and homebrew softwares
USD180 (with worldwide shipping)

*** Remarks: All modded consoles come with 5 backups of your choice
whereas for portables, they will come with 5-10 preloaded games of
your choice on the memory card.

Huh? How can you do RF clipping outside the unit? Not a chance...
Any unit that's inserted in the mic jack is no RF clipper.

Posting-Frequency: posted monthly
URL: http://www.faqs.org/faqs/radio/personal-intro/

Changes followed by "|".

The rec.radio.info newsgroup, first established in 1993, has been recently revived by an active moderation team. We are currently seeking suitable information, FAQ, and bulletin articles from the entire rec.radio.* newsgroup hierarchy for simultaneous cross-posting to our newsgroup.

We are seeking a replacement maintainer for the following information bulletin formerly posted to rec.radio.amateur.* (and currently archived at http://www.faqs.org/faqs/radio/personal-intro/):

radio/personal-intro
Subject: Guide to the rec.radio Newsgroups
Maintainer: jeffreyh@Hawaii.Edu (Jeffrey Herman)
Last Posted: 9 Nov 2001 06:18:17 GMT
Posting-Frequency: 15th of each month

We are willing to provide any technical support necessary to get this article updated and automatically posted again at a regular interval. This would include establishing contact with the original maintainer for any necessary permissions. We would prefer to seek a new, dedicated maintainer at this time, rather than start auto-posting the original article ourselves.

For more information about our newsgroup, see:

http://www.panix.com/~rram/usenet/rri/index.html

Please direct any comments, questions, or criticisms to
rec-radio-info-request@panix.com.

As I said. "Obviously they have to contain 'all the works' (oscillator, balanced modulator, compressor, clipper, filters, balanced demodulator etc)."

And, as Paul said, "At least Datong made a stand-alone unit. There was an article about RF-clipping and the Datong unit in Wireless World a few decades ago."

But maybe Datong didn't know what they were doing.

I was surprised to find a cache of 7812s in my parts bin and even one
LM320K-12 and one LM340K-12.

and all of the hash was gone (for awhile).  I don't exactly
> know how, but a few of the things somehow crept back into the house,

> again...

I just took a walk around the house and see that the things are
everywhere, all plugged in and probably all squawking to some degree.

Thanks for the post.  I believe it was actually a Globe Scout.  The
Galaxy line came later.

Hi Alan
The pictures show it as a Galaxy Electronics, Scout Deluxe.
There was Similiar rig called the Galaxy Chief but this was not as
fancy & CW only!
The WRL Globe Scout was much earlier & a totally different design.
I've seen plenty-o-those but these Scout Deluxe are harder to find as
competition at this time from Hallicrafters(HT-40), Johnson Challeger,
Heathkit DX-40, even Lafalotte radio was intense as many novices can
on board!
73.....

OOPS, Sorry Alan;
You're right, Galaxy came later on with thier SSB gear, All Leo
Meyerson companies anyway, hi!
7trees,
Rich

Unit has dual toshiba 1446's. my radio has a .5 watt dead key and the amp swings around 175-200 on am with the variable between 1/2 to 3/4 the way up. max input is a 4 watt dead key. sure it can swing more but my radio likes it a little lower. it has seen over 300 on sideband. sorry the preamp doesn't work, but i never cared for the extra noise anyway-

Rich,

My first rig was a Globe Scout 680A. The one in the picture is certainly fancier!

BTW, I attended the Palm Desert QCWA meeting in January where they presented Leo with his certificate for 80 years as a ham. His age is something like 97. (It was certificate #34, so hams seem to have good longevity.) Anyway, Leo is still sharp as a tack, though his hearing is poor. Not so bad that he doesn't still get on the air a bit!

They had a lot of company, and the residents here have a very short memory. Datong was second. Comdel made an RF clipper in the late 60's and early 70's. Mike input and amplifier, mixed up to 455 KHz, sideband generated, clipped the hell out of it, filtered it with a second filter, mixed back down to audio with the same LO for injection to your mike input jack. Every serious contester and DXer had one. Cost more than the receiver.

Yes, a quick Google on "RF clipper"+Datong brings up lots of info -
about Datong and lots of others. This is one of the first:
http://www.qsl.net/m0ezp/radio-datong.html

That sounds very complex and expensive all right.
Another problem I see is that they only work on SSB.
My customers insist on something small that fits inside the radio and
processes in all modes. The VoiceMax does that with less than 1% THD.
Can't build them fast enough to keep them in stock...

Why do you think that they only work on SSB? Stand-alone RF clippers
like the Datong are independent of transmit mode. They are audio in -
audio out (with a bit of RF magic in between). They should work even on
an audio PA system.

LOL... a unit like that (http://www.nu9n.com/deq2496.html) would cost
you at least $300. That's more than your whole station is worth!
Come on... you know how frugal hams & cbers are. Get real.

I've said for some time Hamfest should be called "Ham and Ugly Fest".

I'm not sure which has more ugly people.  A Hamfest or a CB Jamboree.

The IQ is higher at the hamfest, but so is the nerd factor.

Also hamfest are more likely to have the old guy walking around with
the oxygen tank and plastic tube up his nose.

When I was young the girls thought I was nice looking and my radio was
ugly.  Now my radio is nice looking, and I ain't what I use to be.

Dream on, Brian. You can't touch my ts870 for less than $1000, more like
$1200 if you can find one.
>

I'm hearing more and more voodoo audio these days so there are plenty of
stations running rack gear, try more listening and less spamming your junk.

You mean that old beat up one you got at the garage sale?
I didn't know you ever got that thing working since it was under water
and so rusty inside.
Kudos on your technician skills... fixing up that old dog.
